PREFACE

THE contents of the book were originally published as separate articles in different periodicals: Chapters I, III, V and VI in the numbers of the *Sri Aurobindo-Mandir Annual* respectively for 1943, 1946, 1942 and 1945; Chapter II in the issues of the *Advent* for February, April, November 1944, and February 1945. Chapter IV is the substance of the two articles called "Thoughts on Ajanta Wonders" and "Some Typical Examples of Ajanta Art" that appeared, the former in the *Shilpi*, 1929, and the latter in the Puja Number of the *Advance*, 1931. The writer acknowledges his indebtedness to the Editors of these journals.

These essays have been thoroughly revised, enlarged and to a considerable extent rewritten in order to fit them in with the general plan of the book. They are mainly inspired by the thought of Sri Aurobindo, an attempt being made in them to study from the standpoint of evolutionary history the progress of man towards his divine destiny, as envisaged in the Master's vision of the future. It is indeed this vision that gives the book its title, its coherence, its ensemble. Each chapter tends to focus this vision

on a particular aspect of man's cultural evolution,—the first on the spiritual adventure of India, the second and the third on unity, the fourth on art, the fifth on a new world, the sixth on history and its record of the march of man towards his supreme goal.

The essays were written at different times, and may appear at the first blush to be lacking in organic unity, but a closer view will bring to the fore a common historical background and an intimate correlation. Certain repetitions may be noticed, but they are deliberate, and intended to stress certain important aspects of the subjects, in which the various creative endeavours of India, and the world generally, have been studied in relation to man's ultimate growth into a greater life in the future.

The world today is in the throes of a new birth. The widespread gloom and the terrible misery and the desolation of the present signalise, not the success but the desperate death-struggle of the forces of Darkness that sway the world-order today. Their movements are like the deepening of night just before daybreak, the maddened sweep and moan of a storm dying down. Even now, these forces have begun to flag and stagger, and the time is not far when they, and those also that are yet stubborn in their resistance, will be completely annihilated. For, the forces of Light are bound to triumph, and the full manifestation of the Divine is a certainty. The earth must cease to be dominated by the Asuras. It is God's

kingdom, and he must come down and repossess it and be its sole Ruler. It is for man now to hear the Call and respond to it by taking an active part in the spiritual remaking of the world, the highest privilege he can ever have in his earthly sojourn. India, the pioneer of this new adventure, is revealing today the secret mantra she has preserved through the ages, the mantra that will liberate man into the truth, bliss and freedom of a higher existence, a diviner perfection, which it is his destiny to attain as the very end and consummation of his life on earth. The book seeks among other things to be a pointer to that phase of India's historic development, which carries in it the mighty seed of a world transformation.

The writer cannot conclude without gratefully acknowledging the kind help and valuable suggestions he has received from his revered friends in the Sri Aurobindo Ashram while revising the essays for publication in book form and when the book was in the press.

CONTENTS

	PAGE
<i>Preface</i>	V

CHAPTER I

THE VISION OF INDIA

Introductory: The mission of India. *Section I.* The age of the Spirit—The vision of the ideal in the Veda and in the Upanishads—Harmony between secular and spiritual life. *Section II.* The age of Dharma—The fourfold motives of life—The Ramayana and the Mahabharata times—Sri Krishna and the future—The Buddha and his influences. *Section III.* The classical age—All-round expression of the creative genius of India—The spiritual character of art—Shankara. *Section IV.* Preparation for a new age—Medieval saints—Tantrik and Vaishnavite mysticism—The cult of the Tantras and the future. *Section V.* The modern age and the pioneers—Sri Ramkrishna and Swami Vivekananda—Religion and the future. *Section VI.* The problem of man's spiritual perfection—The past realisations of the race—Sri Aurobindo's vision—A divine life for man—The Future.

CHAPTER II

INDIA IS ONE

PAGE

Section I. Relation of land to the growth of human collectivity—Land of India as a factor in her regional and racial unification. *Section II.* The Vedic idea of India's geographical oneness—Common religious practices and pilgrimages—The essential unity of religious experiences in India—The many gods and goddesses, the facets of the One Supreme—The two great epics, the sacred literatures, the four aims of life and other social ideals of India, as unifying factors in the collective life. *Section III.* The forest and the Buddhist centres of learning, Taxila, Benares, Nalanda, Odantapuri and the seats of learning in south India, as promoters of an all-India cultural fellowship—The common features of art forms all over India. *Section IV.* Freedom in India's political idealism—The Vedic Samiti—Growth of the idea of territorial integrity of India—The early attempts to give form to it—Forces against the growth of a big empire—The Maurya endeavour—The Indianised foreigners—The Gupta affirmation of Aryan ideals—Harshavardhana—Religious tolerance and harmony during the classical period—The petty states in the north and the south—India's drift towards disintegration—Shankara and the ideal of India. *Section V.* Unity in diversity, the central meaning of India's historical evolution—The medieval saints and the synthesis in Bengal—The efforts of Akbar, Shivaji and Guru Govind Singh—The impact of Europe and the new

awakening—The builders of unity—The larger and deeper vision of unity in the Spirit—The integral perfection of man—India, the chosen instrument of the supreme Shakti.	... 47
--	--------

CHAPTER III

AKBAR THE UNIFIER

Section I. Akbar's place in history—Akbar, a seeker of truth—How in his actions he was guided by an inner urge—Influences on Akbar and his inborn genius. *Section II.* An ideal king and a promoter of religious liberalism, a contrast with the then Europe torn by religious feuds—*Din-i-Ilahi* and unity of India—His social and political reforms—Consolidation of the empire—The loyalty of his subjects and of the Rajputs—Discussions with representatives of all religions. *Section III.* Akbar's vision of a united India and his sincere efforts to build it. *Section IV.* The integrity of India, an expression of the Shakti that India is—Akbar, one of the greatest of the royal unifiers of India. ... 110

CHAPTER IV

THE VISION OF AJANTA

Section I. The excavation of the caves—Mastery of craftsmanship and unity of the art-forms—The inaccessible but beautiful site of Ajanta—The influences on Ajanta and favourable conditions, religious, social and political. *Section II.* Culture

	PAGE
of art as a form of spiritual discipline—The artists' vision of life—Secular themes of Ajanta—The spiritual basis of Indian art. <i>Section III.</i> A study of a fresco painting, the famous group of the mother and child—Indian sculpture and a short description of the Nagaraja group—The façade of the Chaitya hall. <i>Section IV.</i> The tradition of Ajanta and its influences in India and abroad—World-wide appreciation—Ajanta and the future.	... 129

CHAPTER V

TOWARDS A NEW WORLD

<i>Section I.</i> War, a necessary evil—Peace and other higher ideals, and human progress—War also a factor in man's collective progress—A drastic step of Nature when man refuses to advance. <i>Section II.</i> Conflict, an unavoidable phenomenon both in the inner and the outer life of man—Soul force and physical force—Conquest by man of his lower nature, the permanent solution of the problem—The incapacity of human mind to solve it. <i>Section III.</i> Change of man into a higher consciousness, the aim in his evolution of the supreme Shakti. <i>Section IV.</i> Failure of modern civilisation—Gleams of the coming dawn—Liberation from the clutches of the Asuric forces. <i>Section V.</i> The vision of the future—The new Light to usher in the new World.	... 151

CHAPTER I

The Vision of India

THE past of India has yet to be deeply looked into and properly appraised. The spiritual adventures that she has undertaken throughout the ages, especially in the early days of her history, cannot be said to have been studied in all their deeper implications, at least in their bearings on her destiny. It is therefore necessary to emphasise that an insight into and a correct re-visioning of the cultural achievements of the race in their true perspective are indispensable to the future rebuilding of India, to the understanding of the forces that are to bring about a resurgence of her soul. It is said that India has a message for humanity. There is no doubt that she has. But scarcely has any attempt been made to have an exact idea of what the real character of that message might be. A spiritual message is a vague term. Such evangelists about the ancient wisdom of India some of her great

sons have already delivered to the world in her recent past. And India has, because of them, begun to figure more prominently before the seeing mind of humanity. But the inner India, her soul, has yet to say her last liberating Word, the Word that shall bring into birth a new world and solve for ever the problems of mankind.

The story is indeed a romantic one of how India carried on her epic quest into the profundities of life and God and everything that inwardly or outwardly concerned the terrestrial existence of man. The fruits of her unique *tapasya* for millenniums are treasured in her sacred literature and in other relics and antiquities; but they are reflected more unmistakably in the very life of the people, in the continuously enlarging tradition of the Godward endeavours of their soul. Her earliest days, however, were the most glorious, when she had the deepest of her spiritual experiences, when she saw the supreme Reality manifesting itself in every form of creation, when she saw in man his divinity, and proclaimed that man could become that divinity, become a god, become one with God, become the ineffable Brahman.

But India's was not an exclusive spirituality. To her the powers of matter, life and mind were no less real than those of the Spirit; and in the search after their truth her seers discovered that in them is inherent the Spirit which is seeking to unfold itself in the earth-nature. Life, mind and body were

therefore regarded as the field and condition for the Spirit to fulfil itself in the terrestrial existence of man. Thus did India make the first attempt to solve the most vital of problems, the problem of harmony between life and spirit, of which the vision came to her seers almost at the very dawn of her history.

What follows is an attempt to present an outline of a psychological approach to the story of India's endeavour through the ages to realise that ideal in all her inner and outer adventures through which she has grown in power and potentiality, so as to be able today to see and possess the deeper truth of the ideal and show to humanity the Way by which it will be led to the attainment of its highest spiritual destiny. This is the mission to discharge which India has stood through the ages "preserving the Knowledge that preserves the world."

I

It cannot be said that Indian history so far has given due importance to its earliest period which, according to Sri Aurobindo's revealing exegesis, was the most brilliant and creative in the world of the spirit. Indeed whatever efforts in the same sphere India made in the subsequent epochs have, all of them, been inspired by the truths that had come to the intuitive vision of her early seers. The beginning of this spiritual age in India is shrouded in the dim past. The date with which the Rig Veda Samhita is

usually associated represents the close of a long period of vigorous and incomparable inward pursuits of which an idea may be found in the opulent imagery and mystic symbolism of the sublimest truths, seen by the Rishis and expressed in the *riks*. There is reason, however, to believe that greater ages of Intuition, of the luminous Dawns of the Forefathers, had preceded the Rig Vedic times, and that the entire secret of their esoteric teachings was not probably revealed even to the Rishis of the Rig Veda who were perhaps not ready for it. Yet the Rig Veda has every claim to be regarded as the most authentic document recording the Aryan Fathers' deepest experiences of the higher truths whose golden light opened to them the path of the gods.

The end of human life was to these mystics a divine outflowering. "Life is therefore a movement from mortality to immortality, from mixed light and darkness to the splendour of a divine Truth whose home is above in the infinite but which can be built up here in man's soul and life, a battle between the children of Light and the sons of Night, a getting of treasure, of the wealth, the booty given by the gods to the human warrior, a journey and a sacrifice." If a state of permanent living in light, in truth, in bliss, in freedom and in immortality is his ultimate destiny, man will have to attain that in his life by overcoming the limitations imposed on him by his subjection to the forces of darkness, division and falsehood.

The Vedic idea of sacrifice with the soul of man as the enjoyer of its fruits points to the path that leads to this conquest. Of all his gains and works, of all that he himself is and has, man must make an offering to the powers of the Godhead, the powers of Consciousness, the gods, who recognise in the soul of man their brother and ally and desire to help and increase him by themselves increasing in him so as to exalt and enrich his world with their light, strength and beauty. It is not, therefore, that it is man only who invokes the gods to descend into his world, into him in response to his sacrifice. The gods also have need of man to whose awakened soul they send their call to combine with them against the sons of Darkness and Division, who hold their sway over the earth. And victory in this battle—an ultimate certainty—means a new birth for man, a divine becoming; for, liberated from his bondage to the lower nature, man becomes ready for a divine manifestation.

The sacrifice is also a journey, an upward journey, which man undertakes in quest of his supreme goal. And as he does that, he grows from one state into a still higher one till he finds himself before the full Ray of the Light, and in possession of all the treasures of heaven. "Play, O Ray, and become towards us", was the constant prayer of the Vedic seekers. And sacrifice is the way by which the fruit, "the raining of the world of light", can be obtained. The ascent towards the light will fulfil its purpose only

when the descent takes place bringing into the lower the pure experience of the higher. But the effective descent would mean a global widening, an increasing on every side into the wholeness of the world of light. Sacrifice in its inner sense is a glad, ungrudging and aspiring renunciation of the lower and finite for the attainment of the higher and infinite. An offering of all one's possessions and powers to the Supreme from whom they are derived, is the means to the realisation of the Supreme and the enjoyment of the bliss of His Light, Love and infinite plenitude. And the mystic Fire, the fire of the awakened Psyche, is the priest and leader of this sacrifice. In an undeveloped man, this Fire smoulders under a heap of gross vital-physical preoccupations; only in those who have developed their spiritual consciousness and awakened to the high sense of their divine destiny, it flames up and mounts towards the unvalled heavens of the Spirit. It rises, a quenchless, indomitable Seer-Will, *Kavikratu*, cleaving through all the planes of consciousness, devouring all the desires of man, consuming all the rank weeds of his ignorance, till it lands the soul, free and immune, upon the shoreless ocean of immortality. But for this Fire, the soul would remain pent up in an eternal incoherence. It is the great vicar of evolutionary sacrifice, the intrepid pilot of the soul's voyage towards infinity. The life of the Vedic Aryans was every moment of it a ceaseless effort to live up to the ideal of sacrifice, to think of it, to prepare for it and then to make it in an effective

manner. Indeed it was their sole concern, the dominant idea behind all their activities and nothing existed for them which had no connection with this supreme work of life. For the initiates, it was an inner, esoteric discipline. For the lay, it took the form of rites by performing which they would open to the truths implied in the Vedic symbols. The Fire in man must therefore burn and burn continuously. The flames of it must rise higher and higher and the sacrifice properly made, so that man may grow in his spirit and be able to attain the highest end of his earthly existence. This is the integral vision envisaged in the Veda. If by sacrifice the lower principles of man's earthly existence are conquered and made amenable to the influence of the Light which will take them up into itself, into their respective higher terms from which they originated, it is again, by a similar act, but of vaster significance, that the Divine manifests in the human vehicle enlarging it into the infinity of his own being.

The Vedic seers discovered the essential nature of the terrestrial existence as Sachchidananda veiled in the phenomenal oppositions of matter, life and mind, but compelling in the earth-nature an effort to cleave through these contrary conditions and eventually arrive at its own unveiled Splendour, the Perfection implicit in it. These conditions have grown and developed in the earth to create in it the necessary field for a greater Manifestation. They are derived in the lower planes from their original spiritual principles in the higher

hemisphere; Mind from the light of the Truth-Consciousness, Life from the energy of the Consciousness-Force, Matter from the primal substance of Existence. The mystics had the vision of the plane of the Truth-Consciousness whose power is as well inherent in the earth as the above principles but is not, unlike them, active in it, and whose descent into the earth would effectuate that Manifestation towards which man is progressing in his evolution.

The manifestation would therefore mean not only the descent of the Light on earth but also the ascent of man into a higher than his present mental plane of consciousness. It is this higher plane which is the link between the lower hemisphere and Sachchidananda. "Man ascending thither strives no longer as a thinker but is victoriously the seer; he is no longer this mental creature but a divine being. His will, life, thought, emotion, sense, act are all transformed into values of all-puissant Truth and remain no longer an embarrassed or a helpless tangle of mixed truth and falsehood. He moves lamely no more in our narrow and grudging limits but ranges in the unobstructed Vast; toils and zigzags no longer amid these crookednesses, but follows a swift and conquering straightness; feeds no longer on broken fragments, but is suckled by the teats of the Infinity. Therefore he has to break through and out beyond these firmaments of earth and heaven; conquering firm possession of the solar worlds, entering on to his highest Height he has to learn how to dwell in the triple principles of Immortality."

Thus in the psychological and therefore the real implication of the Vedic teaching, life with all its powers is affirmed as a field for the gods' adventure, for a divine efflorescence. If man is of the earth, he is also of heaven; and his godhead will be reborn in him when "Heaven and Earth equalised join hands in the bliss of the Supreme".

With this integral vision of the Infinite and of an infinite existence for man as the perennial source of inspiration, India started on her quest of that which would bring her its realisation in the life of the race. This movement from the Rig Vedic times traced not a straight line but a curve, luminous all through because of its origin in the light to which it was naturally inclined to return, and it proceeded in a downward course with the purpose of illumining the different parts and planes of man's being so that he might be prepared for the perfection that was to come to him in the future. It is not that India could always hold fast to that ideal; but the great epochs of her history are those in which she turned her eyes towards it and strove with all her soul to actualise it in the life of the race, to give form to its truth in the varied expressions of her creative life. For, it is to this sublime seeing of the early fathers that the mind of India does rightly trace all its philosophy, religion, the essential things of culture, the beginnings of the future spirituality of her people.

The curve of the adventure of India's soul showed the first sign of a downward tendency when the Vedic

age of Intuition was passing into the Upanishadic age of intuitive Thought, in which was already faintly foreshadowed the coming reign of Reason. And this adventure was, as it has ever been in later times, a necessity for her growth towards the future which was to be greater than the past. In the Veda intuition had a freer play, since mind and life were then plastic enough to its influence and action. In the Upanishads mind evinced an increasing tendency towards an independent and exclusive self-development and absorbed whatever intuition had to offer for its as well as life's illumination. Nevertheless, there must have been a strong basis of life-force for the vigorous spiritual efforts that were made by the Vedantic mystics. People lived a rich and robust life, and a harmony there surely was between it and the intense seeking after truth that was so much in evidence among the kings and nobles no less than among the sages and saints of the time. Royal courts and forest hermitages were humming with these activities; and such glowing examples were not solitary as those of the *Rajarshis* or sage-kings like Janaka ruling over a vast empire and at the same time living the unfettered, luminous life of the Spirit; and of *Brahmarshis* or kings of sages like Yajnavalkya—perhaps the greatest figure in the Upanishads—to whom truth was greater than anything else, and yet who accepted with both hands worldly possessions along with spiritual riches. Among other noted monarchs of this age were Pravahana Jaivali, Ajata-shatru and Ashvapati Kaikeya, who managed the

affairs of their States, led armies into the battlefield and were at the same time widely known as great teachers of Brahma Vidya.

But how did they discover this harmony? By knowledge, which to the Upanishadic seers was always knowledge by an identity with the object of knowledge in a higher than the mental plane of consciousness. It is while engaged in the pursuit of this truth of knowledge that the seers realised that knowledge of the Self is the highest knowledge, and that "the Self in man is one with the universal Self of all things and that this Self again is the same as God and Brahman, a transcendent Being or Existence, and they beheld, felt, lived in the inmost truth of all things in the universe and the inmost truth of man's inner and outer existence by the light of this one and unifying vision." Harmony among our parts of nature is emphasised in the Upanishads as a basic necessity in spiritual life. And this harmony may be brought about by an inward concentration which will put us into touch with our psychic centre in the inner heart connected through a hundred channels with the lines of our individual consciousness.

The psychic represents the Transcendent in the universal Nature and is intended to manifest on earth the Transcendent through its universalised individuality of mind, life and body. It is the golden nucleus of our evolving personality. This is a distinctive contribution of Indian thought. The West could not go beyond the conception of the constructed individual,

mind being to her the highest power possible to man; whereas in India the Spirit is held to be the highest truth of man, and through it is realised his infinite possibility. Integration of all his powers to the psychic, an aspect of the Spirit in man, would mean the building up of a perfect personality ready for ascension into higher heights of his being. As the seeker opens into the power of the psychic principle in him, he becomes capable of drawing down into himself from higher Nature such forces as may purify and exalt their lower counterparts in him and with an affinity established between his inner nature and the outer, the seeker rises into a higher consciousness and from there into the yet higher of the Transcendent which is the ultimate goal of the Upanishadic teaching. And to that end, all egoistic impulses, all sordid attachments must be completely eliminated from his nature. "Life has to be transcended in order that it may be freely accepted; the works of the universe have to be overpassed in order that they may be divinely fulfilled."

The whole view comprised by the oneness of life and spirit was there, but the greater urge that characterised the period was always towards the realisation of the transcendent Truth, through which new riches of world-knowledge, God-knowledge and Self-knowledge came into the possession of the early mystics. If the Vedic basis was in the main psycho-physical, in which life was not only recognised but emphasised as the condition for a greater life, the

Upanishadic was fundamentally psycho-spiritual. Yet the latter was little more than a restatement in less symbolic but more intelligible term of the truths expressed in the former. "The Upanishads did not deny life, but held that the world is a manifestation of the Eternal, of Brahman, all here is Brahman, all is in the Spirit and the Spirit is in all, the self-existent Spirit has become all these things and creatures; life too is Brahman, the life-force is the very basis of our existence, the life-spirit, *Vayu*, is the manifest and evident Eternal, *pratyaksham brahman*. But it affirmed that the present way of existence of man is not the highest or the whole; his outward mind and life are not all his being; to be fulfilled and perfect he has to grow out of his physical and mental ignorance into spiritual self-knowledge." The most inspiring record of revelatory knowledge, the Upanishads, have throughout the ages exercised their profound influence upon almost every sphere of man's spiritual, religious and cultural life both in India and abroad.

II

During the age of the Spirit, the Veda, and the Vedanta affirmed this ideal, giving to the Indian mind through the universality of their teachings that peculiar synthetic cast which became so clearly defined in its catholic outlook, especially on matters concerning the social and religious welfare of the

people. The age of Dharma that followed witnessed the working of a comprehensive plan to bring about an integral development of man's individual and collective existence. It was marked by such constructive efforts as resulted in the fixing of the external forms of Indian life and culture in their broad and large lines. The Vedantic soul of India begins to take its body, but it is a body which is, or has always tended to be, one with its soul; because the body here has no meaning without its indwelling Spirit. It is this idea that governed every kind of social thinking in ancient India: law-makers and psychologists were ever alive to the fact that everything in life acquires its value only when it helps and converges on the attainment by man of his spiritual perfection. This is why, recognising the complexity of human nature, they tried to discover its right place in the cosmic movement and give its full legitimate value to each part of man's composite being and many-sided aspiration and find out the key to their unity.

The result of this endeavour was the laying down of the four fundamental motives of human living, *artha, kama, dharma* and *moksha*, man's vital interests and needs, his desires, his ethical and religious seeking, his ultimate spiritual aim and destiny. The other institution, evolved as a corollary to the above, was that of the four stages of life. The first was the period of education and preparation based on this idea of life; the second, a period of normal living

to satisfy human desires and interests under the moderating rule of the ethical and religious part in us; the third, a period of withdrawal and spiritual preparation; and the last, a period of renunciation of life and release into the Spirit.

It is clear from the above two basic conceptions of the ancient Indian social theory, more so from the first, that it accepted and provided for a disciplined satisfaction of the claims of man's vital, physical and emotional being, since the ego-life of *kama* and *artha*, desire and self-interest, must be lived and the forces it evolves brought to fulness, so that the eventual aim of a going beyond may be accomplished with less difficulty; the claims of his ethical and religious being governed by a knowledge of the law of God and Nature and man, because *dharma* is not merely a religious creed but a complete rule of ideal living by which life is to be guided in its fulfilment, each individual growing into his perfection, and to that end, developing his creative faculties, which will bring well-being not only to him but also to his society; the claims of his spiritual longing for liberation, for the Law, Dharma, and its observance is neither the beginning nor the end of man; beyond it is the great spiritual freedom which man must claim as the ultimate end of his existence. An integration to this supreme goal of the whole tendency of man comprised by *kama*, *artha* and *dharma*, seems to be the ideal emphasised by the social thinkers of India.

This was, indeed, a very great attempt to build a synthesis, and although in later days an over-emphasis on the last aim and the consequent neglect of the others disturbed the social equilibrium for a while, it cannot however be denied that the steadfast following of all these aims by the people produced vast results, so brilliantly described in the great epics. In the Ramayana the ethical side of man's nature is given an extreme importance and its fulfilment is sought through the sincere performance of the duties formulated by the ancients. It pictures an age of heroic action and of an early and finely moral civilisation; whereas the Mahabharata reflects a puissant intellectualism, the victorious and manifold mental activity of the age, which gives its character to the culture then prevalent in the country. Heroic action there was, but it had in it more of thought than in the Ramayana.

There is no doubt that all the human activities depicted in these two grand expressions of the creative soul of India were inspired by the ancient ideals, although a tendency towards external formation and construction both in the social and mental life, for which the periods mainly stood, detracted from their effort to re-vision the past in its true light. Hence the curve of India's adventure went further down making an arc from where it had started and remained confined for a time to the region of the mind; but, we may repeat, the curve was a luminous one, and the mind of India was sustained by its innate spiritual inclination,

of which an outstanding evidence in the latter period is the supreme truth revealed in the Gita, in which a harmony is built of the three great means and powers, Love, Knowledge and Work, the dynamic sublimations of the power of heart, of mind and of life, through which the soul of man can directly approach and cast itself into the Eternal. Here the harmony aimed at reaches its highest point when by a complete self-giving to the Godhead man becomes the fit instrument for a divine manifestation.

In the age of Dharma man was a full-fledged mental being—his intellect was keen and capacious and masterful; but it had already begun to turn a red eye on life, to dominate and dragoon it into its fixed moulds. Itself a prisoner of its own principles and creeds, it sought to impose the same captivity upon life's free and fluid movements and stood in the way of its higher progress. Sri Krishna—a unique figure in the history of human evolution—came at this stage and tried to break down these inflexible barriers of the mind and release it into a loftier atmosphere, an ampler light, and a more plastic assimilation. He represents an unparalleled harmonisation of the salient strands of all forms of past spiritual culture and exalted it not only to a very high plane of universal vision but also to a mighty effectuation. He restored to man the idea of Purushottama, the integral Divine, and emancipated the soul from the rigour and rigidity of the mind into the luminous vastness and perfection of

the Overmind. Indeed, he stands as the trumpet-voiced herald of the Overmental fulfilment.

But the Overmind is not the summit of human ascension. There is the Supermind, the supreme Gnosis and it is the destiny of man to rise into its unbarred Light and all-creative Truth-Will. To this plane of all-comprehending consciousness too Sri Krishna points a finger of light. His work continues, time ripens and humanity prepares for the advent—we had almost said the acknowledgement—of the next supreme Leader.

The essential idea in the age of Dharma was to bring to bear upon the creative powers of mind and life the past spiritual experiences of the race. But the attempt was made, as naturally, through the exercise of the ethical and intellectual faculties both of which developed out of a deep understanding of man's inner profundities. But however high and pure their standards, they are born of the powers and impulses of the mind. Be they the four motives or the *ashramas*, they, all of them, belonged to the same category of human creation as the cultures characterised by them and embodied in the epics. So in those early days, the mind of India went through its first round of experiences ample enough to enable it to be ready for the great classical age that came as a flowering of the intellectuality of the previous epochs into a curiosity and care of detail in the varied expressions of the cultural life of the people.

In the later days of the age of Dharma the mind of

India was found to be almost entirely engrossed in the formalistic interpretation of the ideals and institutions of the race, and man's right to follow them was more restricted than before. The result was that a spirit of revolt began to show itself in the rise of many dogmas and creeds, and society ceased to function as a cohesive force in the collective life of the people. Moreover, life betrayed a tendency towards hedonistic pursuits. It was at this critical juncture of India's history that the Buddha came and delivered his message of Freedom, freedom from ignorance and suffering, from all social and religious aberrations, even from one's own self, into an utter transcendence above and an overflowing love and compassion below. A way out into the vastness of a Beyond, and an oceanic heart of equality and active love for all, are his greatest gifts to humanity.

This message of freedom and the powerful impact of the Buddha's love unclamped the creative energy of India which found an almost immediate expression in an outburst of cultural activity which has no parallel in all history. It was, indeed, a veritable spring-tide of Indian culture when the genius of the race broke into a myriad forms great, grand and glorious. It inundated the whole country and brimmed over to many distant lands and peoples. India's gospel of universal love echoed in China and Japan and Palestine and even Alexandria. The seeds of a world fraternity were sown, and a noble gesture was made towards human unity. But the deeper meaning of

the Buddha's advent is that the compassion he incarnated was the compassion of the Divine for His creatures, His Grace, as it were, in which was hidden the assurance to man that he as a race is destined to a high spiritual achievement.

Buddhism, however, represents an important phase in the spiritual life of India. Of the two directions in which the mind of India seemed to be moving about the time when Buddhism began to be a force in the cultural life of the people, the one is the expression of its creative genius and the other is the denying of life as being a bondage and an obstacle to spiritual pursuits. But both of these were recognised in the age of Dharma. The former was regarded as one of the varied motivations of human personality whose fruition was necessary for the all-round growth of man, for which ample provision was made in the laws that were meant to guide the social evolution of the race. This tendency, moreover, received a great impetus when by its insistence on freedom Buddhism liberated the social life of India from many of its cramping evils and thereby created conditions favourable to the growth and advancement of culture. The latter tendency might be traced to the longing for release from this mundane existence into the Spirit, the Beyond: broadly indicated in the ideals of *moksha* and *sannyasa*, it had not a little to do with the Buddhistic conception of Nirvana. When the true seeker found that religion was compromising with life, subjecting its high spirit to the satisfaction of the latter's

un-spiritual demands and was thereby deteriorating into soulless forms of mere externalia and priestly obscurantism, so much in evidence about the time of the Buddha's advent, it was but natural that he should think of nothing else but an ascetic withdrawal from life in order to be able to live exclusively in the spirit, in the pure truth of religion,—an idea which may have derived some sustenance from one of the trends of the Upanishadic teaching.

But this attitude, as indisputable objective proofs testify, did not very much or materially affect the abundant vitality and creative energy that were so boldly exhibited by the race in its continuous cultural endeavours for centuries, all through sustained by its inborn spirituality, an echo of which is noticed in the ideal of universal fellowship, preached and practised by Ashoka. Indeed, the deeper springs of Ashoka's love for humanity and interest in its religious welfare as were always behind those efforts of his are to be found not so much in his adherence to the ethical conception of the *Dhamma* as in the natural spiritual disposition of the country to which he belonged. And the creative activities of the age almost everywhere in their wide range reflected this tendency. The light of the Spirit was touching mind and life and was also in some instances guiding their movements, but it did not rule them as a governing principle, perhaps because they were not ready, and needed more experience for their fuller expression in the Spirit.

Perfection is attainable to man only when he

prepares himself to accept in every member of his being the absolute rule of the Divine.

III

The classical was an age of scholars, legislators, dialecticians and philosophical formalisers. It witnessed the creative and aesthetic enthusiasm of the race pouring itself into things material, into the play of the senses, into the pride and beauty of life. The arts of painting, architecture, dance, drama, all that can minister to the needs of a great and luxurious civic life, received a grand impetus which brought them to their highest technical perfection. "It is a period of logical philosophy, of science, of art and the developed crafts, law, politics, trade, colonisation, the great kingdoms and empires with their ordered and elaborate administrations, the minute rule of the Shastras, in all departments of thought and life, an enjoyment of all that was brilliant, sensuous, agreeable, a discussion of all that could be thought and known, a fixing and systematising of all that could be brought into the compass of intelligence and practice,—the most splendid, sumptuous and imposing millennium of Indian culture." Never in her history has India seen such a many-sided blossoming of her force of life. Culturally, she has never been so rich, so colourfully creative. And no other age has given her such a plethora of experiences. Indeed, she needed them or rather Nature wanted her to have them, so

that India might grow in her being and prepare for the new and greater age of the Spirit that was to have followed the classical period. It goes without saying that from the vigorous efforts made in this age to give form to the various impulses of life, the mind of India had also its due share of growth and experience.

It is in this great age—of which the highest point was reached in the Gupta times—that classical sublimities found their marvellous expression in the poetry and drama of its representative literary mouth-piece, Kalidasa, and in those of the galaxy of its poets and dramatists, the recension of the epics was completed, most of the *Puranas* were written, the *Dharma-sutras* were codified, the *Smritis* were given their present form, the Sankhya and Mimamsa philosophies were systematised, the *Shilpa-shastra* (Fine Arts), the *Kamasutra* (Eugenics, Erotics and allied subjects), the *Artha-shastra* and the *Shukraniti* (Polity) were written, the ancient Indian ideas on Astronomy, Physics, Chemistry, Botany, Zoology, Medicine and Mineralogy were rendered into their respective treatises through which they are known today, the master-pieces of art at Ajanta, Bagh, Ellora, etc., were produced, the famous figure of the Buddha was evolved along with the Shikhara and other distinctive characteristics of India's temple, cave and secular architecture, the international centre of learning at Nalanda flourished. The encyclopaedic character of the scientific learning of the age was represented

among others by Varahamihira, a master-scientist, whose *Brihatsamhita* is a veritable mine of authoritative information on almost every branch of Science.

In such an age, when life seems to have been lived in its fulness, it is but natural that the curve of India's adventure should go further down in its circular movement reaching a region in which it found itself in touch with the material basis of life. Here the mind of India was seeking to infuse its light of the Spirit into the materialised vitality of man, and was trying to have an insight into the truth of matter. Thus behind these activities of life, the old spirituality of the race reigned to keep the lamp of its soul burning. And the most vivid expression of it is found in the works of art of this period which exhibit a marvellous blending of the two main tendencies of the Indian mind, its love of life based on an understanding of its varied motivations, and its quest of God, the Spirit, the Self of things with the life as the condition and instrument of its manifestation.

The art-creations of this age are indeed a striking example of the peculiar æsthetic bent of India defining itself in the effort of the artist to suggest through the form his inner experiences rather than any external idea of the things seen by him. The artists were to go through a course of spiritual discipline and were in many instances known as *silpi-yogins*. But they did not confine themselves to the depicting of the sacred subjects¹ only. The secular scenes at Ajanta and Bagh, done by

¹ Briefly dealt with in Chapter IV

monk-artists, show the accuracy of their knowledge of earthly life; yet the figures of women in them in the peculiar *tribhanga* (the triple bend) pose indicate a wonderful harmony between such contrary feelings as nonchalance and voluptuousness, both losing themselves in an utter spirit of self-surrender that has surely about it something beyond the concerns of the earth. These frescoes as also those in the same style and of the same period found in other parts of the country are verily marvels of ancient Indian painting. Apart from their classical excellence for which they are famous all the world over, they are characterised by a suggestion of the unity of life and spirit, the vision of which came to the seeker-artists of the age. Painting is naturally the most sensuous of the arts. But the painters of these works succeeded wonderfully in spiritualising this sensuous appeal by making the most vivid outward beauty of their pictures a revelation of subtle spiritual emotion so that the soul and the sense are in harmony in the deepest and finest richness of both and united in their satisfied consonant expression of the inner significance of things and life. In the art of sculpture of the period the most remarkable achievements are the figures of the Bodhisattvas and the Dhyani Buddha. The former represent a marvellous blending of the feeling of detachment from the outer world and the feeling of an infinite compassion for suffering creatures; the latter symbolise the greatest ideal which Indian sculpture ever attempted to express—the beatific communion of the

individual with the universal Soul in a vast, radiant mood of victorious calm which is yet vibrant with the mighty rhythms of the Eternal.

The spiritual seeking of India took a particular turn about the close of this period when a movement is perceived towards preparing the country for a greater age in which her gains through the cultivation and development of her moral, intellectual and material powers in the previous times would be all equally harmonised and made real in the world of the spirit. To all appearances, Shankara did show the promise of being a precursor of that great age in India. But he had not the complete vision, the whole view of the larger integral ideal of ancient India, of which the supreme truth was a harmony between life and spirit, a mediation between earth and heaven. Shankara mistook the materialistic character of the culture of the period for a tendency towards deterioration; neither was he able to visualise the past history of India from a wider perspective. Disgusted, perhaps, with certain aberrations in the religious life of the people, he sought release into the realm of the Spirit, leaving the impure Life bound to the more impure Matter to run for ever the vicious round of its earthly existence. He affirmed the impermanence of life, and tried to substantiate this pessimistic view in the light of his own one-sided interpretation of the ancient scripture. *Moksha*, liberation from the bondage of life, he preached with all the vehemence he could command, and his success meant the failure of the country to

grow in readiness for the greater future that had been the underlying intention of all its past endeavours.

Though supreme in his own way, Shankara proved unequal to the task that lay before him of furthering the cause of the country towards the fulfilment of its highest destiny. Rather, his negative philosophy contributed, however indirectly, to the strengthening of the forces of disintegration that had been at work in the country during the post-classical age and a foreign invasion destroyed whatever possibility there was of a new awakening. It must however be conceded that the efforts of Shankara were responsible for one and a great good. If his denunciation of life emasculated the manhood of the race, as before him the similar teaching of the Buddha had done, his emphasis, however exclusive, on the absolute aspect of the One Reality, helped the bewildered and groping mind of India to revert to its ancient affirmation and experience of Advaita, the One Reality without a second.

IV

But these strivings and the consequent preparation of the country for a new turn in its life did not all go in vain. Nurtured by the country's age-old spirituality, they flowered into a vigorous revival of the self-same tendency that expressed itself so remarkably in the teachings of the mystics, in the Vaishnavite movements and in the cults of the Tāntras. The medieval

saints proclaimed that truth is greater than religion, of which the forms also are one in the very core of their teachings. They affirmed to the people, irrespective of caste, creed or race, that life was a necessary condition for man's growth into a greater life for which an absolute concordance between his inner and outer existence was indispensable. And mystical experience by living inward and through the fervour of devotion was, according to them, the only way by which that harmony could be discovered.

This as well as the Vaishnavic and the Tantrik cults had all of them their roots in the past. The Upanishadic origin of Vaishnavism and Tantrikism is now established beyond doubt, though there is an opinion that their genesis may be traced to even earlier dates. Through its intimate contact with the forces of life during the classical age the country became conscious of newer possibilities that were considered realisable by man if he could accept the whole of himself including his vital and sensuous natures as the field of his spiritual pursuits. And both of these cults restarted in the post-classical age with this refreshing and wider outlook.

Vaishnavism received a great impetus during the classical age, especially during the Gupta period when its main scriptures, the Bhagvata and the Epics underwent a redaction into their present forms. Through these powerful literary influences the Vaishnavism of the North spread to the South where it took a more intellectual form but was equally, if

not more, productive in the cultural life of the people which expressed itself amazingly in a vast literature and in the arts, particularly in the gorgeous massiveness of its architecture in which the creative soul poured out the whole of its wealth, all inspired by and articulating an outburst of *bhakti*, so rapturously sung by the Alvar saints.

The heyday of Vaishnavism, however, is witnessed in the very life and teachings of Sri Chaitanya of Bengal. Here the aim was to sublimate the vital impulses of man through the intensity of devotion into an absolute adoration of the Divine. But it could not go beyond an inner psychic experience of the inner Divine, and whenever a great externalization was attempted, we know what happened—vitalistic deterioration, corruption and eventual decay. Besides, an entirely spiritual integration was not possible in Vaishnavism in which man sought an eternal nearness to the Divine in his world of Light and not an absolute union with Him, which was a conception of later Vedanta. Nevertheless, it was the heart here that received the light and found its fruition; and the curve of India's adventure, though yet bound to the levels of the earth, had, it seems, begun to look towards heaven dreaming of the eternal Brindavan and of its establishment in terrestrial life as the consummation of man's spiritual endeavour.

In a sense Tantrikism may be said to have made a nearer approach to the ideal towards which the soul of India has been moving throughout her history. It

also is a remarkable flowering of the Indian spirit and another indication of the spiritual renaissance that was to have taken place as the crowning fruit of the creative efforts of India terminating with the classical age during which Tantrikism became another dominant cult, and many of its scriptures including the *Chandi*, the quintessence of Tantrik thought, were written in Bengal.

Tantrikism sought to raise the whole man into the divine perfection as envisaged in the Veda. Regarding life as the cosmic play of the Divine, it postulates a purpose in the play which is possible of fulfilment only in man, who alone of all creations has the unique privilege of awakening to the power of Consciousness latent in him as it is latent in everything else in the universe. Man is a microcosm in himself, having in him all the forces which in their action and interaction constitute the cosmic phenomenon. And when that potential power sleeping at the base of his physical system is roused, it proceeds upward through the centres or planes of the above forces rendering them dynamic with its own power, so that they converge in all their new-found strength on the realisation by him of a state in which he possesses and becomes possessed by a higher consciousness.

This ascending urge in man represents his evolutionary possibility, the secret aspiration of his soul towards liberation into a greater life; and when stirred into activity by man becoming conscious of it and responding to its impulsion, it rises up and

establishes a free contact between the lower and higher worlds, and passing through all the centres of the being, sublimates, polarises and affiliates them to the Transcendent above. The sadhana here is more synthetic, but an absolute self-surrender to the Will of Mahamaya, the Shakti, is imperatively necessary. Like the Upanishads the Tantras also aim at Transcendence, although their idea of Shakti has been generally understood to mean *Prakriti*, the Will-in-Power executive in the universe, who instead of being a Power of *Chit*, Consciousness or *Purusha*, is herself the controller of Purusha or Shiva. Thus, it is a cosmic force whose invocation by the seeker for ascent into higher states usually results in a widening of his consciousness, in the awakening in him of luminous powers, that are often the experiences in the intermediate stages, before the Transcendent is reached in which Purusha and Prakriti become one in the supreme Brahman.

The Tantriks started with life and tried to delve deeper into its secret so as to find its unity with the Spirit. They had the vision of the Light, but what they were able to bring down into life was not the creative light of the Consciousness-Force—the supreme dynamic source of harmony and perfection—but an aspect of it through the universal force of Nature, which illumined their being but did not, as indeed it could not, transform its parts. Hence their highest aim, except in rare instances, remained far from being completely realised. “And in the end, as

is the general tendency of Prakriti, Tantrik discipline lost its principle in its machinery and became a theme of formulae and occult mechanism still powerful when rightly used but fallen from the clarity of their original intention". Nevertheless it is the most daring of spiritual experiments ever undertaken by mankind, and its practice produced a rich harvest of psychological experience of almost every part and plane of man's being, so much so that a conception of their integrality and wholeness was felt to be a necessity in the later spiritual endeavours of the race.

The spiritual mind of India derives not a little of its synthetic cast from the culture of the Tantras. Bengal, the earliest to take it up, developed it by going through every aspect of its discipline and achieved a success almost unique in her religious history. It contributed very largely to her remarkable creative activities in the realm of art and learning, which are witnessed more particularly during the Pala period when Mahayana Buddhism was prevailing in the country only as another name for Tantrikism. Throughout her history Bengal may be said to have been growing in her consciousness of Shakti, which is believed to be a chief source of inspiration of many of her fruitful cultural efforts. And it would not be entirely incorrect to say that even in modern times the cultural and religious movements in Bengal, many of them, have had distinctive elements of Tantrik idealism as their guiding motive. It is in

them as well as in what was done before in the same direction that the meaning is to be sought of the tendencies of the race and of the possibilities of their fruition in the future.

In the days of the decline when everything seemed discouraging for a renewal of the country's destiny it was the Tantrik thought, no less than the practice of its cults, that kept alive the fire of the nation's soul, and when the opportune moment came we find it leaping up into a flaming aspiration towards the Light as seen by the ancient fathers. At this momentous period the curve of India's adventure, for the first time since it began, shows signs of an upward movement. It seems to have caught a very faint glimpse of the same kind of light as it had started from and gravitates towards its divine glory to describe a full circle.

Tantrikism, combining as it does different means and methods of man's inner striving, rekindled in the being of the race all its past seekings and helped to canalise them towards the fulfilment of its highest spiritual destiny. If it could not achieve its great aim in the long period of its influence and popularity for reasons already stated, it must at least be given the credit of having conduced in a great degree to the readiness of the country for the perfection that was to come to it in the future.

V

But the Tantras were not the only source from which the inspiration was drawn for the rebuilding.

of India in modern times. The earliest movement,¹ started in the last century, looked to Vedanta and in the light of its teachings affirmed its ideal, although its inaugurator, it may be noted, had himself Tantrik inclinations. This great soul was the first in modern India to turn his eyes, as also the eyes of his countrymen, from the glamour of foreign ideals that were then slavishly imitated, towards all that was truly glorious in their own past. That he and those who followed him did have a glimpse of the truth of the soul of India is testified to in the endeavours that one after another were made to repossess that truth, stripped of its old forms, and on it to rebuild her life and society. The keynote of their call was an insistence on the need of the race to awaken to its inherent spirituality and make that the very governing principle of all its activities. This urge was by itself the first sign in modern times of India returning to her own self and, therefore, preparing for a renewal of her destiny.

We find this renascent spirit defining itself in almost every form of the cultural and religious activity of the time in which the contribution of Vaishnavism also is not negligible. Its literature, art and poetry reflected this new idealism. The political endeavours, too, of the period were not a little inspired by it, by the vision of India the Mother, and

¹ This and the later movements have been more objectively dealt with in the last chapter of the author's book, *Cultural Fellowship of Bengal*.

their inner motive was always to rehabilitate her intrinsic, therefore spiritual, greatness which, they believed, was possible only in an atmosphere of freedom. It is true that an ascetic tendency is perceptible in the aim of the more recent of the religious movements, but a deeper insight into the lives and teachings of the two great personalities, associated with it, reveals that they represented the awakened soul of the race, that they were greater beyond measure than the work that stands in their names, and that everything they did envisaged a most stupendous work for the spiritual uplift of India and the world.

A child of the Mother, Sri Ramakrishna possessed 'a colossal spiritual capacity by which he mastered in an incredibly short time the truths, himself having practised them, of every religion and of every form of spiritual discipline, and drove straight to the divine realisation, taking, as it were, the kingdom of heaven by violence.' His was a finger of light that pointed India onward along the age-old path of the Spirit, by which only, as he and his great disciple repeated time and again, could she arrive at the goal assigned to her by the Dispenser of her destiny.

But Sri Ramakrishna's was an inner realisation of the inner Divine, and life was to him a necessary field for that. Indeed, life has no meaning if it cannot be an expression of the Spirit. The truth of life, therefore, lies in the discovery by man of his own divinity. Sri Ramakrishna saw the oneness of the Divine and His Creative Force and called upon man

to turn towards Her and live in Her. That is why Dakshineshwar is the beginning of the Mother's work to which was given its first form by Vivekananda, that mighty apostle of resurgent India. It was here that the past spiritual experiences of the race were re-lived and the initial lines of their application indicated, so that the country by following them might grow in readiness for the new age of the Spirit in the future when that work would be accomplished.

Among the immediate forces that brought about the awakening in modern India one was largely due to the impact upon her of Western pragmatism that urged her, first, to have a clear understanding of the problem and then to find out whatever help the people were yet capable of rendering towards its solution. Religion was certainly an important element in her greatness in the past. And it was then a thing of experience. But being anchored on a fixed social system, it could not grow with time so as to be able to satisfy the deepest spiritual aspirations of man, and showed a tendency towards externalism which in the days of decline became so dominant that any enlarging of it or a revival of its true spirit seemed impossible.

Religion in India, more than in any other country, tried to take hold of man's parts of life and draw them Godwards, and thereby to reconcile the spiritual Truth with the vital and material existence. But it could not keep to this high aim all through. Instead of making Earth obedient to Heaven, it had

the opposite result of making Heaven a sanction for Earth's desires; for, continually the religious idea has been turned into an excuse for the worship and service of the human ego. Thus, leaving constantly its little shining core of spiritual experience, Religion everywhere has lost itself in the obscure mass of its ever-extending ambiguous compromises with life. It has even gone so far as to divide the higher expression of man, such as knowledge, works, art and even life itself, into two opposite categories, spiritual and worldly, religious and mundane, sacred and profane, forgetting thereby the imperative need that is being felt today of a larger opening of the soul into the Light, an opening through which the expanding mind, life and heart of man must be integrated into a harmonious whole where everything that is now condemned as profane will be turned into a divine substance and wear a divine complexion.

This failure of religion to be of any further use to man in his spiritual seeking is today sufficient ground for him not to depend on it any longer, and to seek the guidance elsewhere, in the very depth of his being. And as he grows in his quest, the truth becomes more and more clear to him that his life acquires its intrinsic meaning only when it finds its harmony with the Spirit, and it is in the Spirit alone that lies the secret of a spiritual dynamism that will take into itself everything that life covers and illumine it by the light of the Spirit. There is no gainsaying the fact that this is the dawn-fire of a new age for

mankind, an age of subjectivism, whose promise in India was shown by the efforts that began to be made about the close of the last century, indicating that the race is yet capable of giving a good account of its old capacity for inward pursuits which brought to it this much-needed experience. But the far deeper meaning of it is that the truth of the integral ideal, the ideal for which India has stood through the ages, has been seen and possessed by the Master of the race who also shows the Path by which man will be led to realise that ideal both in his individual and collective life.

VI

What, then, is that vision? It is the vision of a dynamic divine Truth which is descending into the earth to create a new Truth Consciousness and by it to divinise life. The call of the Spirit was responded to in the past by jumping straight from the mind into the Absolute or the immutable Impersonal, regarding all dynamic existence as Ignorance, Illusion or *Lila*. The fundamental error in it may be traced to the incompleteness of the vision which in the Vedānta was that of the pure Transcendence—a vision from which was derived the partial conception of the colourless Spirit, barren of the creative force of Sachchidananda, and which in the Tantras, was that of the cosmic aspect of the supreme Shakti effecting a modification of her light and power so that they

might be received and assimilated by the inferior nature of mind, life and body.

But these were no solution of the problem. If complete spiritualisation of life is the aim, these instruments also must undergo a total conversion, and for that the plenary power and light of the Para-Prakriti, the Supernature, is necessary. Thus while the Vedantin took his flight up into the regions of the Absolute, the Tantrik brought down whatever he acquired in his ascent and used it to perfect his parts of nature, but the wholeness of the perfection did not come, because his realisation was not of the highest kind, which only could accomplish it. Yet in the Yoga of the Upanishads and to some extent in that of the Tantras, this ascension meant a definite widening of the entire consciousness, an enlarging of it into the higher reaches of truth, light and Ananda. But what was not there was the integration, the unification of all into a whole.

The highest range of consciousness beyond mind, so far attained after the Upanishdic period, is the Overmind in which every power and aspect of the Divine Reality has its own independent push towards the utmost development of all its individual possibilities, so that a complete conception of them as integrally one in the indivisible all-comprehending Unity could not be had there. The splendour of its diffused light dazzled the seekers to such an extent that they took that to be the highest Light and failing to find in it the Oneness they were in quest of, swerved from the path and shot straight towards the sheer Spirit. They

therefore, realised the truth of the One but missed the truth of the Many in the One and the One in the Many. Tantrikism and Vaishnavism accepted the Many as the *Lila* of the Divine, but it was to them the cosmic play and not the manifestation of the one Reality.

The discovery of unity and harmony between these apparent irreconcilables has not therefore been practicable and has remained for ever an object of striving for man throughout his history. The Vedic seers had a glimpse of it, as also the early Upanishadic mystics, but in the later ages when intuition gradually gave way to reason, the vision dimmed, and whatever attempt was made by the mind proved unsuccessful. But the evolutionary Nature has all the time been active in preparing man for his ultimate destiny. In India, which is to be the leader of human evolution, this work takes a definite form, and an outline of it, traced above, may indicate the inherent trend of her endeavours towards the goal. Her recognition of the sovereignty of the Spirit above everything else has given India much of what she needs for her growth towards the Light. But she needs more. Perfect knowledge or whole knowledge is not possible even in the Overmental consciousness. It has not that integrality which alone can explain creation, and not being in possession of the supreme Conscious-Force, it is beyond it to bring about the perfection of the earthly existence.

What, then, is the solution? Is spiritual perfection of the race always to remain a chimera, a dream? and approaches to it, if ever possible, to be limited to

individuals only attaining to particular ranges of consciousness, and the divine destiny of man to continue to remain unrealised as ever? Sri Aurobindo says that there is a solution, and that conditions in life and nature are not only pointing to but also pressing for it. To him has come the vision of that dynamic Truth of Divine Reality, called by him the Supermind, whose descent into the earth-nature is as inevitable, he says, as was the descent of Mind and Life before it. And the ascent too of the earth into this new Power is equally a certainty. If the perfect unfolding of the Spirit is the ultimate fulfilment of man's manhood, then man the mental being, bound to the Ignorance and imperfection, cannot of course be the last word in the evolutionary endeavour of Nature.

Evolution, says Sri Aurobindo, presupposes a process of involution. The Spirit descended into Matter and created in it the urge towards a greater expression. And Life emerged, and in the same way did Mind. In man the urge becomes more insistent, taking the form of a definite aspiration for the spiritual living which only can liberate him from his bondage to the Ignorance and imperfection. But no readiness on his part can effect this change in him, though readiness is a basic condition for it. The Supermind alone can do it. The evolution of man into the Supermind, that is to say, into the Light and Truth of this creative power of the Divine would mean its coming down into the earth consciousness and becoming dynamic in it by quickening its own Force already involved in

it, even as the powers of Life and Mind became active in the earth through their impact on their own principles involved in it. Evolution is not a mere ascent of a part of our being from one grade to a higher till the highest is reached, in which case the uplift of the whole being would never be possible. It is at once a sublimation and an integration of the whole being.

The spiritual growth of man stops short of its fundamental aim in that the higher light that his upward endeavour brings to him touches and sublimates that particular part of his being by which he makes that effort, as mind in the case of the Vedantin, heart in that of the Vaishnava, and the higher vital and the life-parts of nature in that of the Tantrik; but the *entire being* has never had the benefit of the light. Evolution, according to Sri Aurobindo, is not only an ascent but also a descent making for a transformation and integration of the whole nature, and evolution into the highest plane would mean the change and uplift of all the lower stages. The integrating ascent to the Supermind would therefore bring about a total conversion of the *whole being*,—the new Truth sending its light into the remotest corners of the being. “This illumination and change will take up and recreate the whole being, mind, life and body; it will be not only an inner experience of the Divinity, but a remoulding of both the inner and outer existence by its power.” Not only this, but “it will take form not only in the life of the individual but as a collective life of the gnostic beings established as a highest power and form.

of the becoming of the Spirit in the earth nature."

This is the integral vision towards the realisation of which in the life of the race India is to lead mankind, and discharge thereby the mission assigned to her by God. Every endeavour in the past was a preparation for it; and the time has now come for her to reveal this truth to humanity and show the way by which it can be realised. And when this integral evolution is accomplished in the life of man, divinised and new-created by the dynamis of this new Light from heaven, all the highest aspirations of the race, its deepest strivings towards perfection will have been fulfilled; all its golden dreams of the kingdom of God on earth, its sublimest visions of the intrinsic divinity of man will have become a living reality. And the curve of India's adventure becomes the glory of a complete circle, an effulgent orb radiating the fires of a greater dawn than was glimpsed by the Vedic mystics; for, the Master of the race has seen the Light of the Supermind, seen it in all its vastnesses, in all its supernal splendours, felt its invincible powers of transformation and of a new creation. Thus does India deliver her message—the highest indeed of its kind—for the liberation of the human race, and fulfil thereby the purpose of God in the evolution of terrestrial existence. And the Seer today is also the Leader of the Way. The call therefore goes forth from him echoing the ancient *rik*:

“Arise, O Souls arise! Strength has come,
Darkness has passed away—the Light is arriving!”

A full idea of the Supermind and of the consequences of its working in the earth consciousness is not possible mentally to have, far less to express. And for whatever of it is available it is better that one should in the spirit of seeking go to the Master himself who has given to it a magnificent expression in his *magnum opus*, *The Life Divine*.

The Supermind is a link between Sachchidananda and the lower hemisphere of creation. A creative consciousness with Unity as its constant basis, it creates, governs and upholds the worlds; and being the nature of Sachchidananda itself, it creates nothing which is not in its own existence. Its truth is inherent in all cosmic force and manifestation. In it the Light is one with the Force; and being, consciousness and will are the three indivisible and harmonious aspects of a single movement. "To its self-awareness the whole existence is an equable extension, one in oneness and in multiplicity, one in all conditions and everywhere. Here the All and the One are the same existence; the individual being does not and cannot lose the consciousness of its identity with all beings and with the One Being; for that identity is inherent in supramental cognition, a part of the supramental self-evidence." The truth of Transcendence and the truth of Manifestation are one in it, and therefore also the truths of the Spirit, Life and Matter.

In the supermind there exist the true principles of eternal harmony; and when man is in possession of its Gnosis he will discover that harmony and find in

it the permanent solution of all his problems. From his present subjection to the obscure workings of the Ignorance in nature he will then be liberated into the freedom of the Spirit, into the infinite light of the supreme knowledge. He will then live, move and have his being always in the supramental consciousness of the self-existent Truth, of its dynamic and creative power, the Conscious Force, which is the Para Prakriti, the Supernature, of whose Will his life will be a perfect manifestation, of whose heavenly splendour the whole terrestrial existence will be a luminous revelation.

It is to this Mahashakti, the Divine Mother, that man must open, and consecrate himself wholly and entirely, so that by her Grace he might be made ready for the descent into him of her new Light from above; for the Supermind is her Light, her Force. "This supramental change is a thing decreed and inevitable in the evolution of the earth consciousness; for its upward ascent is not ended and mind is not its last summit. But that the change may arrive, take form and endure, there is needed the call from below with a will to recognise and not deny the Light when it comes, and there is needed the sanction of the Supreme from above. The power that mediates between the sanction and the call is the presence and power of the Divine Mother. The Mother's power and not any human endeavour and *tapasya* can alone rend the lid and tear the covering and shape the vessel and bring down into this world of obscurity and falsehood and death and suffering Truth and Light and Life

Divine and the immortal's Ananda."

Books Consulted

For the philosophical and psychological basis of this essay the following books and sequences of Sri Aurobindo have been consulted:—

Essays on the Gita, Isha Upanishad, Kalidasa, The ideal of the Karmayogin, The Life Divine, The Mother, The Renaissance in India, The Riddle of This World, A Defence of Indian Culture, The Hymns of the Atris, The Secret of the Veda, The Synthesis of yoga. The last four are titles of articles that serially appeared in the "Arya" (1914-20.) The quotations in the article are all of them from the above books and articles.

For the historical basis the standard works on Indian history and culture by the following authors have been consulted: Ananda Coomaraswamy, K. P. Jayaswal, R. C. Majumdar, R. K. Mookerjee, Sister Nivedita and Vincent Smith.

CHAPTER II

India is One

I

THE lure of fertile land was the cause of the earliest corporate life of man. The first human unification was effected by *place* from which has developed the idea of a common homeland and through that, in due course, a common nationality. It is the bounties of nature that attracted groups of humanity to settle in river valleys and organise collective existence by taking to agriculture, and gradually to other arts of life that laid the foundation of human civilisation. There is much truth in the idea that a race too, especially in its origin, is the creation of a place which is nurtured by nature into a geographical distinctness. In the chemistry of human intermingling which began with the migration of races, the original types were lost, and new ethnic forms were evolved out of the process of admixture which is unceasingly going.

on in the common life of humanity in more and more subtle ways through the dynamic of social intercourse. It is, therefore, the land, more than the race origins, which binds man to itself and becomes his common object of attachment and adoration. The land where we are born and brought up and which was also the birth-land of our forbears is one of those unfailing forces that shape our destiny, the destiny of the nation.

The land is thus the basis on which the growth of a collectivity and also of its culture and institutions depends so much. If the many races that may happen to people it fail for any reason to realise their unity and solidarity, if even their religions and languages are unable to foster it among them—though religion in India, called the *Sanatana Dharma*, the eternal religion, has throughout the ages been a synthesising factor in the community life of the people—the geographical integrity of the country by itself may and does sometimes help them to grow into a sense of unity, founded in the most vivid fact of their being born in and mothered by a common homeland.

The land of India is endowed by Providence with various features that distinguish her in many ways. This ancient land has its own meaning and mission, its own glory and grandeur, its own distinctive character and interest and culture. Its unity is determined by its definite frontiers, the Himalayas on the north, the Hindukush on the north-west, the seas on the east and west. And this unity has developed into a national

consciousness premeating the mind and heart of the people whose love of the land of their birth has been an indissoluble cementing bond of a singularly religious-cultural nature. It is a kind of love which is a sacrament, a worship, and which no language can properly define. It has been growing from within not merely as a patriotic impulse but as an abiding religious feeling, as an almost mystic perception. Indeed the awe and admiration the people feel for the snow-swathed summits of the Himalayas, the menacing hills of the frontiers, the laughing valleys of Kashmere, the rolling downs of the Deccan, the surge and thunder of the seas, the limpid flow of the great rivers of the country, is the proof and measure of its inspiring and formative influence. Says Sri Aurobindo: "The feeling of almost physical delight in the touch of the mother-soil, of the winds that blow from the Indian seas, of the rivers that stream from Indian hills, in the hearing of Indian speech, music, poetry, in the familiar sights, sounds, habits, dress, manners of Indian life, this is the physical root of that love".

It is through this appreciation of the romance India outwardly is that we begin to feel within us a kind of inner relationship not only with her material embodiment but also with her soul; and as this feeling deepens the mere external fact vanishes, and there emerges before our mind's eye, no less vividly, an idea, a dynamic concept, of which the land becomes a symbol, an image, an object, as it were, of our love and veneration. Nothing indeed can more

unfailingly develop in us an abiding sense of our fellowship with others, with all, belonging to a common land of birth than when we are blessed with this exalting experience. And does not this sense invariably prove real enough as a wholesome and strengthening factor in our collective life? In fact, it is the very bedrock of it. The physical loses itself in the ideal, and the ideal fulfils itself in the real, reconciling the apparent contradictions into a harmony, a oneness that is built out of the manifoldness of our country's human and geographical elements. It is a force, an energy inherent in its soil and pervading its space, that works this transforming miracle. India is that Force, that Spirit which makes its mystic appeal to the inmost being of her children. Sri Aurobindo once said that India had never been to him what was merely suggested by her outer vesture attractive and gorgeous though they are. She is to him the Mother, the eternal and infinite Mother, the compassionate Mother of man. The truth of India is revealed to those who respond to this appeal and thereby know the secret, the supreme secret of her motherhood. To this vision of the Mother does the land of India call her children, whatever their caste, creed or race.

It is interesting to trace the evidences so far available as to how this idea of the oneness of land, all the more defined by its incomparable greatness and magnificence, became a cohesive force in the evolution of India's culture, whose unity—the land playing its role in it also—is so unmistakably articulate in

her art, literature, religion and in all her splendid institutions that came into being as a result of her millenniums of creative striving.

The land-mass that is called India has always been regarded as one with the human mass that inhabits it, this fusion being effected in the consciousness of the people through its inherent spiritual outlook to which everything is a manifestation of the Spirit. If the Indian sees God in himself, he sees Him also in others and even in the phenomenal universe around him. No wonder therefore that the land in which he is born should acquire in his conception an inward character, a profound significance, compelling his highest love and admiration. But the land-mass of India is not an isolated formation. It is a part, however sharply separated, of a vaster region with which it has always in the past kept up intimate friendly relations. Besides being bound up with her sister countries in Asia in a common love of mysticism and spiritual pursuits, India has had from very early times deep and extensive cultural intercourse also with nearly all of them.

The influence of the pre-Buddhist India on various parts of Asia and Europe apart, the Buddhist communities in pre-Christian Asia Minor and the Indian missionaries in China and Japan in the early days of their history represent two extremities of that vast tract of land which together with most of the south-west Asia and the Islands of the Indian Archipelago does even today bear witness to the immensity of their

indebtedness to India for much of what forms the texture of their religious and cultural life. Nevertheless, if India is a living embodiment of the Spirit, Asia is no less so: and India from that standpoint is an organic part of it. Though a soul by herself, she in her heart is one with Asia, her physical setting. And it is not for nothing that she is called the heart of the Orient. In the words of Okakura Kakuzo, "Asia is one. The Himalayas divide, only to accentuate, two mighty civilisations, the Chinese with its communism of Confucius, and the Indian with its individualism of the Vedas. But not even the snowy barriers can interrupt for one moment the broad expanse of love for the Infinite and Universal, which is the common thought-inheritance of every Asiatic race, enabling them to produce all the great religions of the world, and distinguishing them from the maritime peoples of the Mediterranean and the Baltic, who love to dwell on the Particular, and to search out the means, not the end, of life."

India, this great country of ours, stands with the parent continent as her grand background. Provided with natural protection she has lived through the ages to fulfil the mission assigned to her by the Dispenser of her destiny. Vanished are the splendours that went by the names of Egypt, Babylon and Greece! The empires that flourished in Europe exist today only in the records of history. But from times immemorial India has been developing herself not in isolation, as the charge is unjustly made against her, but in

love and friendship with her neighbours, and with everyone who comes to her, be he a foreigner or even an enemy. Yet she has a personality all her own, an individuality, that marks her out as something that has no equal in the annals of the earth.

The geological movement leading to the creation of land in which early human civilisation began in India was the retreat westward of the extensive Euro-Asiatic Ocean called the *Tethys* giving rise to the plains of northern India through a process of formation which must have taken ages. The fertility of this region is due to many factors among which may be mentioned the life-giving waters of a river system that was formed by the linear depressions which remained after the large-scale geological movement was over. The deposits washed down from the northern highlands added no less to the richness of the soil. On these plains, along the banks of the Indus, right down eastward along the banks of the Ganges, streams of humanity flowed in unison with the waters, as it were, and spread out into the interiors till the scene was complete with the drama of the early human migration in India.

The geographical unity of India is indisputable, in spite of the bewildering variety of her physical features; and equally so is the unity of her vast humanity. The uniqueness of her culture is ascribed by some writers to this unity as well as to her natural separation from the rest of the world. It is the conviction of the Hindus that there is an inner meaning

behind her physical formation as also a spiritual purpose of her existence as a conscious embodiment of the Shakti that India is. The vision, not once but many times in her history, came to the fathers of the race that India is verily the Mother who has stood through the ages entrusted with the task of 'preserving the Knowledge that preserves the world till Krishna comes back to repossess the Kingdom that is his.' To the Hindus the mother and motherland are greater than heaven itself. Whatever it is, it is clear enough that this vast country, almost a continent, is indivisibly one in the fundamental principle of its individuality which has been developed by the movements racial, social and cultural that have been taking place in India from times prehistoric.

It is not even two decades when the view was held that the story of human culture in India began with the Indo-Aryans. But the excavations in Mohenjo-daro and Harappa have not only pushed back the date by more than a millennium but also revealed evidences of a civilisation superior to many then existing in the world. It is of course the valley of the Indus which was the scene of this great event proving the remarkable antiquity of Indian culture and the glorious role India played in the early history of human civilisation. The inhabitants who peopled those prosperous cities represent four different ethnic types. It seems racial intermingling began in India even in those days when peoples of various stocks, whether original settlers or emigrants from outside,

shared a common land as their home and built a civilisation that was then and is even now a marvel of human creation. The gates of India from west to east were always open; the routes by the sea were so easy; and the inland rivers were mostly navigable. All these offered easy passages for human immigration into India from days unknown to history. The physical types that constitute the present population of India are evolved from the three principal ethnic types through the continuous process of racial intermingling. The foreign elements absorbed by her are broadly distinguished as Greek, Iranian, Mongolian, Scythian, Hun, Semitic and some even of what constitute the modern European. All these elements India has assimilated to her being, giving them the stamp of a common nationality. Was it not some magical power of the land that effected this miracle of human unification? And are not always associated with India the beauty that she is, her inexhaustible resources, and a culture that in the past was her greatest contribution to the happiness and progress of mankind?

“This admixture of races”, says C. E. M. Joad, “has had important effects on India’s past history and present outlook. The first of these is a sense of fundamental unity far more vivid and persistent than can be accounted for by the circumstance of proximity in the same geographical area. Europeans live together in a geographical area whose size is not very different from that of India. But as the wars

which have disgraced European history in the past and the quarrels and rivalries that enfeeble the League of Nations in the present only too clearly show, that the inhabitants of Europe are very far from being imbued with the sense of unity which distinguishes the inhabitants of India. We cannot, in short, speak of a "European" with the same appropriateness as we can speak of an "Indian", who, in spite of differences of colour, caste and creed, looks upon all other Indians as his fellow-countrymen and upon India as his home."

II

The Vedic Aryans were yet in the midst of their victorious campaigns to Aryanise the whole of India and bring it under the unifying discipline of a common culture and civilisation, when rose the great king Bharata who, as mentioned in the Rig Veda, extended the Aryan supremacy over a vast territory and consolidated different parts of the country into an organic entity knit together by the dynamic influence of the Aryan ideals. It is from him that India derives her ancient name *Bharatavarsha*, just as Rome derives her name from Romulus. To these Aryans came the earliest vision of the oneness of India and they expressed it in the river-hymns of the Rig Veda. Even today the Hindus chant these hymns and recall and worship the image of their mother-country as the land of seven rivers which cover between them

the whole of India. There is another prayer which conjures up the picture of India as the land of seven sacred cities representing the important regions in the north and the south. There are besides a number of religious practices prevalent among the Hindus from very early times which as well as the prayers, mentioned above, indicate that the religious mind of the Hindus is deeply imbued with a conception of the integrity of India whose sacredness is enhanced by the influence it exerts in shaping the common destiny of the country as visualised by the ancient seers. Pilgrimage also is another sacred institution, most popular among the Hindus, which accentuates this notion and gives it a still more definite shape. Every principal faith or sect of the Hindus has its holy places spread over the length and breadth of the country. Pious Hindus visit these places and meet their fellow pilgrims and feel a sense of comradeship with them fostered by their allegiance to the common ideals that are the ideals of their common motherland. Religious fairs contribute no less to the development of this sense in the Hindu mind.

If it is the land of India that has reared up her body of humanity and impressed on it the stamp of its own unity, it is her culture, evolved out of the vision of her thinkers, which has given the soul of that body its meaning and intention. What that culture is has been discussed by Sri Aurobindo in a series of luminous essays called *A Defence of Indian Culture*, published in the "Arya" from which we

shall quote appropriate extracts to show how the life of the Hindus is essentially one in all its varied creative endeavours. Spirituality, says Sri Aurobindo, is the master-key of the Indian mind. It is this dominant inclination of India which gives character to all the expressions of her culture. In fact, they have grown out of her inborn spiritual tendency of which her religion is a natural outflowering. The truth of the unity of her various religious efforts as well as their synthetic sublimity has been revealed by Sri Aurobindo in the following words: "The Indian mind has always realised that the Supreme is the Infinite and perceived that to the soul in Nature the Infinite must always present itself in an infinite variety of aspects. The aggressive and quite illogical idea of a single religion for all mankind, a religion universal by the very force of its narrowness, one set of dogmas, one cult, one system of ceremonies, one ecclesiastical ordinance, one array of prohibitions and injunctions which all minds must accept on peril of persecution by men and spiritual rejection or eternal punishment by God, that grotesque creation of human unreason which has been the parent of so much intolerance, cruelty and obscurantism and aggressive fanaticism, has never been able to take firm hold of the Indian mentality. Men everywhere have common human failings; intolerance and narrowness especially in the matter of observances there have been and are in India, violence of theological disputation, querulous bickerings of sects

and their pretensions of spiritual superiority, sometimes; at one time especially in southern India in a period of acute religious differences, even local outbreaks of active mutual tyranny and cruelty. But these things have never taken the proportions which they assumed in Europe; they have been confined for the most part to the minor forms of polemical attack, intolerance and social obstruction or ostracism and have transgressed very little across the line to the major forms of persecution. Behind these weaknesses of human egoism there has stood always in India the saving perception of the higher spiritual mind, which has had its effect on the mass mentality, the living perception that since the minds, the temperaments, the intellectual affinities of men are unlimited in their variety, a perfect liberty of thought and of worship must be allowed to the individual in his approach to the Infinite....The fundamental idea of Indian religion, the recognition of a one and finite Godhead who can be approached and worshipped through any of his infinite aspects, a supreme and supracosmic Existence which manifests itself in the cosmos and enters into multitudinous relations with the souls in the universe who are one with or part of its own being, gives a many-sided appearance to Indian cult and spiritual experience... When the Indian mind sees the One without a second, it still admits his duality of Spirit and Nature, his many trinities, his million aspects. When it concentrates on a single limiting aspect of the Divinity and

seems to see nothing beyond it, it has still at the back of its consciousness the sense of the All, the idea of the One. When it distributes its worship among many objects, it looks beyond the multitude of godheads to their unity. This synthetic turn is not peculiar to the mystics or the literate or the thinkers nourished on the high sublimities of the Veda and Vedanta, but permeates even the popular mind which is filled with the thoughts, the images, the traditions, the cultural symbols of the Purana and Tantra; for the Puranic and Tantrik ideas, names, forms and symbols are only concrete representations of the combined monism, unitarianism, universalism and synthetism of the Vedic scriptures....To understand the effect of Indian spiritual culture on the life of the individual and the community, we must recognise its synthetical character and embracing unity. The One Existence, to whom sages give different names, of the Upanishads is the fundamental seeing of Indian spirituality. All comes from, exists in, returns and amounts to that One. To discover, closely approach, enter into whatever unity with this Infinite, this Eternal, is the height of spiritual experience. That is the first idea of the religious mind of India. The second idea is the manifold way of man's approach to the Eternal and Infinite. This infinite is full of many infinities and each of these infinite aspects is the Eternal in his glory. In the limitations of the cosmos God manifests himself to man and fulfils himself in the world in many ways, but each is the

way of the Eternal; in each finite we can discover and through all things approach the Infinite. All cosmic powers and manifestations are of the One and behind the workings of Nature are to be seen and adored powers, names, personalities which are the godheads of the one Godhead. The divine Will and Energy are behind all happenings, whether to us fortunate or adverse, and over each way of the universal dealings stands a form of the presiding Deity. He creates and is Brahma, preserves and is Vishnu, destroys or takes to himself and is Rudra or Shiva. His supreme Energy is beneficent in upholding and protection and is the Mother of the worlds, Lakshmi or Durga, or beneficent even in the mask of destruction and is Chandi or Kali, the dark Mother. He manifests himself in form of his qualities; the God of divine love of the Vaishnava, the God of divine power of the Shakta appear as two different godheads but are the one Deity. These things we try to explain now as symbols, which is by the way of an intellectual compromise with modern reationalism; but the Indian religious mentality saw them not only as symbols but as realities, because between the highest spiritual being and material being it is aware of other psychological planes of consciousness and experience and these things are truths of these planes no less real than the outward truths of material universe. Man approaches God at first according to his psychological nature, experience, capacity for this deeper experience, *swabhava*.

adhikara, whence comes the variety of religious cult, belief and way of divine union. But also there is a third idea of the strongest consequence, that not only through aspects of the universal spirit and all inner and outer Nature can the Divine be approached but each individual object and being is in its spiritual being intimately one with the one divine Existence. In each individual man is the divinity, Narayana; all corporate or collective being is a form of the divine Narayana. God is in ourselves and in ourselves we have to find him. The supreme truth of all divisions is a secret unity. These three ideas govern the Indian religious mind and the seeing of them is its whole seeing. Indian spiritual culture opens up a hundred ways to arrive at the truth of our religious being, but its consummation is to see God in man and man in God, God in Nature and Nature in God, God in all things and all things in God, and to go beyond them to their origin in the supracosmic Absolute, Eternal and Infinite." The words quoted above unravel the hidden meaning of the religious culture of the Hindus and its essential oneness. They explain why one Hindu is a worshipper of Shiva, another of Krishna and the third of Shakti; why it is that there is a multiplicity of gods and goddesses; and yet how all of them are bound by the golden thread of the same soul's aspiration towards the self-same spiritual perfection which to them has always been the ultimate end of human existence.

In ancient India knowledge was transmitted by

oral method. Like the *raconteurs* of ancient Greece who preserved and disseminated the *Iliad* and the *Odyssey*, India also had her reciters and declaimers who carried down from generation to generation and from court to people the great epics, the Ramayana and the Mahabharata. It was these national minstrels who used to wander about the country singing the story of the epics, and thereby imparting the best popular education to the people. The epics abound in noble examples of sages and saints and kings,—men who were the makers of empires and builders of societies,—in ideals of human conduct that exalt and inspire, religious and social teachings that guide and give shape; all these have always been the most profound influence in the life of the race forging it, as it were, into a unity of endeavour to live up to the lessons that the characters in the epics so powerfully inculcate. Even today in very remote villages in every part of India the epics, whether in Sanskrit or in vernacular versions, are recited by the *Kathakas* before gatherings specially organised for the purpose. The art and literature of the Hindus are not a little indebted to these epics for the themes they have always drawn from these almost inexhaustible fountains of sociological knowledge. The Mahabharata represents the whole history of the race in one of its most glorious periods. Its authorship goes by the name of a great poet, but it has in it contributions from many sources. A great people speaks through it. Its very name suggests the greatness of India's unity. Says Sri Aurobindo: "The

Mahabharata is not only the story of the Bharatas, the epic of an early event which had become a national tradition but on a vast scale the epic of the soul and religious and ethical mind and social and political ideas and culture and life of India. It is said popularly of it and with a certain measure of truth that whatever is in India is in the Mahabharata. The Mahabharata is the creation and expression not of a single individual mind, but of the mind of a nation; it is the poem of itself written by a whole people."

To whatever sect he may belong, no Hindu can conceive of spiritual life without its never-failing source of inspiration, the Gita. In the thought of every school of spiritual idealism can be traced the influence of this great scripture. It presents the first synthesis of Hindu thought, and in it lies the secret of a yet greater synthesis of which a revealing exposition has been given by Sri Aurobindo in his *Essays on the Gita*. The Gita moreover contains the very key-word of unity. To see God is not the only ideal set forth in it: to see Him in all and all in Him is the true truth about the oneness of all creation. The influence on the mind of the Hindus all over India of the vast range of literature, both sacred and secular, is no less a unifying factor in the community life of the people.

The earliest evidence of some kind of synthesis in the religious life of India is supplied by the seals of the proto-Indian civilisation of the Indus valley which along with other antiquities of similar nature are

believed to indicate a common religious life of the people about whom a more remarkable fact is that they were free from the fear of violence and war, as shown by the absence of war weapons, walls, ramparts or fortifications among the relics that have been so far unearthed of those oldest cities of India. Gerald Heard is of opinion that this is most likely the earliest form of pacifism in the world. The influence of the Vedas in shaping the religious life of the Hindus requires no recapitulation. Says Sri Aurobindo: "The mind of ancient India did not err when it traced back all its philosophy, religion and essential things of its culture to the seer-poets of the Vedas, for all the future spirituality of her people is contained there in seed or in first expression." There are many hymns in the Rig and the Atharva Vedas which emphasise in a more subjective sense the need and importance of unity in the community life. They fervently exhort man to be united with all, in heart, in aim and in work, to be friendly with all and to pray so that all may be friendly with him. In the Upanishads the call goes forth from the Rishis to the whole of mankind to come and share with them the delight of their spiritual visions. The Upanishads permeate the entire range of Indian thought. They are also the common source of inspiration to all schools of Indian mysticism. In a word, Vedanta, as the Upanishads are called, represents the highest spiritual idealism of ancient India. Says Sri Aurobindo: "The Upanishads have been the acknowledged

source of numerous profound philosophies and religions that flowed from it in India like her great rivers from their Himalayan cradle fertilising the mind and life of the people and kept its soul alive through the long procession of the centuries, constantly returned to for light, never failing to give fresh illumination, a fountain of inexhaustible life-giving waters. Buddhism with all its developments was only a restatement, although from a new standpoint and with fresh terms of intellectual definition and reasoning, of one side of its experience and it carried it thus changed in form but hardly in substance over all Asia and westward towards Europe."

The social institutions of the Hindus contributed no less towards strengthening the bonds of social and cultural unity among the different classes of the people. The essential idea in all their social thinking is that man is not a machine but a god in the making born to blossom forth to the best of his potentialities; and the chief function of the society is to give him every facility so that he might fulfil his highest destiny both in his individual and collective life. Says Sri Aurobindo: "The business of culture and social organisation in ancient India was to lead man, satisfy and support him in some harmony of the four aims of life; desire and enjoyment, material, economic and other aims of the mind and body, ethical conduct and right law of the individual and social life and finally spiritual liberation, *kama*, *artha*, *dharma*, *moksha*. The insistence was always there that except

in rare cases the full satisfaction of the first three of these objects must precede the last, fullness of human experience and action prepare for the spiritual liberation; the debt to the family, the community and the gods could not be scamped." By fulfilling the first two of these aims man enriches his mental and physical being, by the third he finds himself bound up with the society, and by the fourth he attains the highest objective of life. But the institution of caste was a more potent force in consolidating the social basis of the Hindu culture. The four grades of culture implicit in the system were integrated into an important factor in the progress of Indian civilisation in the past. The modern idea of a classless society negates the fundamental nature of human being which generally was divided into the four categories evolved by the psychologists of ancient India. "The real greatness of the Indian system of the four *varnas*", says Sri Aurobindo, "did not lie in its well-ordered division; it consisted in the ethical and spiritual contents which the thinkers and builders of the society poured into these forms. They started with the idea of the intellectual, ethical and spiritual growth of the individual as the principal need of humanity, society as its necessary framework and its system of relations. A secure place had to be found for him in the community from which he could serve these relations, maintain and pay all his debt to the society and proceed to his self-development with the best possible help from the

communal life. This place they conceived as one provided for him by the indications of his capacity, temperament and nature. Birth was taken in practice as the first test; the heredity was of a high importance; it was taken even in later thought as a sign of the nature and the needed surroundings which the individual had prepared for himself by his past soul-development in former existences. But birth was not considered as the sole test of *varna*. The intellectual capacity, the turn of the temperament, the ethical nature, the spiritual elevation were the important things." There are many instances of Kshatriya kings excelling in spiritual knowledge. Many of the Upanishads were written by them. Vishvamitra's attaining Brahminhood is not certainly a solitary instance.

A society thrives on the intrinsic worth of its members. And the members can prove their worth only when they are given freedom to grow into the summit of their possibilities. This livingness of social organism is sought to be replaced today by deadening mechanical means with the object of moulding human nature into a single Procrustean type; and to achieve that end freedom is tabooed lest free-thinking should create conflict, and obedience is exacted by forcing man into an artificial existence so that he might conform to the law of the machine. It ought to be clear to those who advocate these views that the weak who are deprived of their freedom are thereby helped to gather strength to assert their birthright when the time comes for them to rise.

Ancient Indians recognised that true social harmony is possible only when every member in the society has ample opportunities of self-development. The system of caste which was always elastic and flexible was guided by this attitude of the Hindu mind. It is not birth but, as the Gita says, his action and spiritual attainment that determine man's position in society to which every member of any caste, be he a Brahmin or a Shudra, is equally important. It is real worth that matters. In the ancient literature of the Hindus there are many examples of great saints and sages being born of low and unknown parentage. Even young men of doubtful antecedents were admitted to instruction by great sages simply on the ground of their personal nobility and earnest seeking for knowledge. Satyakama's cannot certainly be a solitary example. The strength and cohesion of the Hindu society lay in this catholic outlook which largely prevented division of the people into hostile factions, as well as any series of internecine wars, which have disgraced many countries. With the advent of foreigners into India, the process of racial chemistry began to be active again and in the first few centuries of the present era we find that the Hunas, Shakas and Pallavas were being absorbed into the Hindu social structure; and for their valour and devotion to Aryan ideals they were accepted by the Brahmins as Kshatriyas and given equal status in the society. Caste did not stand in the way of this notable racial assimilation, but helped it by recognising the intrinsic

individual merits of those peoples and their readiness to be naturalised as Indians. In the days of India's decline, the system was exploited by interested people for the satisfaction of their selfish ends and for dominating the society whose downfall they brought about by pursuing a policy of suicidal segmentation and mutual exclusion.

III

(The centres of learning in ancient India had also their contribution to the building of the one cultural life of the people.) The hermitages of well-known sages were the earliest universities of India where students from far and near used to gather for instruction in various subjects. The Mahabharata abounds in descriptions of these hermitages in the Naimisha forest of which the presiding personality was Shaunaka who was honoured with the title of *kulapati*, sometimes defined as the preceptor of ten thousand disciples. There were conferences convened by great kings where representative thinkers were invited to meet and exchange their views. During the sessions of sacrifice the courts and palaces of kings were also the scenes of congregations of learned men who would enter into deliberations over the deepest problems of philosophy in which women also took part. In the age of Buddhism, monasteries were the strongholds and distributing centres of Buddhist culture, which enabled it to maintain its hold upon the country.

and helped to spread it evenly among the different parts thereof. We may mention the four famous special Buddhist Convocations and many other regular and ordinary ones where religious and philosophical problems were discussed and important decisions taken. In his travels from the north-west across the Punjab along the Jumna-Ganges valley down to Tamluk in Bengal Fa-Hien in the fifth century noticed almost numberless monasteries full of monks belonging to either of the great Paths of Buddhism. There were no rigid rules for admission to many of these monasteries which accommodated monks of different schools. When Hiuen Tsang visited India in the seventh century there were about five thousand monasteries with a population of more than two hundred thousand monks. The well-known universities of this period, developed out of these monasteries, were Nalanda, Odantapuri and Vikramashila; Taxila, Benares, Ujjayini and Amaravati being others which from the beginning flourished as universities even before the former ones.

Taxila, the most ancient known university town in India, was famous as the principal seat of Hindu learning in Northern India. In its different schools were taught the Vedas and as many as eighteen other subjects including arts, sciences and a special course in medicine. It attracted students from all over India and across the border. Afghanistan and Central Asia were represented on its rolls as well as Greece and Asia Minor. The Greek Heliodoros and the

philosopher. Apollonius of Tyana were certainly not solitary instances. In India it was the fashion in those days to send princes and sons of nobles and well-to-do Brahmins to complete their education at Taxila. It was considered an honour and distinction to be a graduate of this university. Panini, the great grammarian of the seventh century B.C., and Jivaka, the court physician of Bimbisara and Ajatashatru, are said to have studied here. Originally a centre of Brahminical culture, Taxila became in later times a seat of Buddhist learning. Its glory however remained undimmed for nearly a thousand years during which it built up a tradition of creative scholarship that was an inspiration to various institutions in India, helping thereby to strengthen the cultural unity of the country.

Benares has always been a culture-centre of all-India fame and even in the Buddha's day it was old and known as such. Though not a formal university, it is a place, unique in India, which has throughout the ages provided the most suitable atmosphere for the pursuit of higher studies. The method of instruction as also the curriculum followed there in early times was adopted from Taxila. Benares is the only city in India which has in it schools representing every branch of Hindu thought. And there is no spiritual path which has not its centre in Benares with resident adherents. Every religious sect of the Hindus has its pilgrimage there. In ancient days Saranath figured as a recognised seat of Buddhist learning. Rightly, therefore, is this holy city called the very heart of spiritual India.

The most notable of the ancient centres of learning in the North was the international University of Nalanda in Magadha, the largest of its kind in the contemporary world to which scholars of different castes, creeds and races hailing not only from the farthest ends of India such as Kashmir, Peshawar, Conjeevaram and Samatata (south-east Bengal) but also from countries far beyond,—from China, Japan, Korea, Java, Sumatra, Tibet, Mongolia, and Bokhara,—flocked for carrying on advanced studies in the various branches of knowledge as embodied in the culture, both Brahminical and Buddhistic. The Pala kings of Bengal were among its best patrons. Of the 10,000 residents in the University, 8,500 were *alumni*, and 1,510 were faculty members. Nalanda was famous for the wide catholicity of its method, for the liberal character of its curriculum. Through its schools of discussion, and the debating and conference methods according to the old Indian tradition it surely helped to unite its varied elements into a superb intellectual fellowship to which the contribution of the wide variety of subjects taught was no less remarkable. The curriculum included all the systems of thought, then prevalent in the country, in spite of the fact that Nalanda was a centre of Mahayanist studies. The Vedas, the Upanishads, the works of different philosophical systems as Samkhya, Vaishe-shika, Nyaya were studied and taught as also the arts and sciences of the Hindus. The various schools of Buddhism were represented by their reputed

exponents and earnest learners. The famous Chinese pilgrim Hiuen Tsang came here to study the Yoga philosophy with the eminent Bengali scholar Shilabhadra who was then its Chancellor. People belonging to almost all the sects and creeds of the time shared a common cultural life in Nalanda, a cosmopolitan university in the true sense of the term. No wonder that it should have fostered a spirit of intellectual brotherhood among the vast number of its members.

The University of Vikramashila on the western frontier of Bengal was founded by the great Pala king Dharmapala and was named after him, for Vikramashila was one of his names or titles. The Tibetan historian Taranath says that Dharmapala founded as many as 50 centres of learning in his empire. Vikramashila was known as a Royal University, its titles being bestowed by kings who presided over its convocations. It had 114 members on its teaching staff and more than 3000 students hailing from all over India and across the border. Its special subject of study was the Tantras and the Tantrik cults in which Buddhism in Bengal found its new forms. Vikramashila made a great contribution to the exposition of Tantrik thought which helped forward the synthetic fusion of Hinduism and Buddhism. It rose to the height of its fame when that Bengali scholar-saint Sriñjan Dipankar was its Chancellor. Dipankar visited many centres of Buddhist learning in India and abroad. He went to Srivijaya—modern Sumatra—and gave a fresh impetus to the study of Buddhism.

there. At the repeated requests of the king of Tibet, he undertook a perilous journey to that country and founded there a school of Tantrik Buddhism. Even today in many monasteries of Tibet Dipankar is worshipped as next to the Buddha.

When Muslim iconoclasts destroyed these peaceful abodes of culture on the frontiers of Bengal, *tols* or schools of Sanskrit learning began to flourish in the sequestered villages, far away from the centres of political turmoil. Of these the most famous was Navadwip, for many centuries one of the greatest centres of Sanskrit learning in all India, where scholars from distant parts of the country, from the Punjab and Kanauj in the north and Tamil-Nad in the south used to congregate for the study, among other things, of the Nyaya philosophy of which Raghunath Shiromani was then the highest acknowledged authority. The *Gaudiya riti*—Bengal's own style of Sanskrit composition—was no less an attraction for scholars from outside.

While in the North cultural fellowship grew and developed almost invariably in the Buddhist monasteries, in the South it thrived mostly in the temples, those wonderful specimens of massive architecture, surrounded by buildings within big compounds. In fact, each such temple in South India was like a small university town which was the centre of the cultural and religious life of the locality. The temple-colleges maintained free hostels and hospitals and attracted students from different parts of India. Learned

Brahmins, in charge of temple worship, were connected with the colleges as their professors. Inscriptions furnish authentic information about these centres of learning, many of which flourished during the ninth and tenth centuries of the present era. A Rashtrakuta minister founded the famous residential college at Salotgi in Bijapur, which had twenty-seven boarding-houses. The Sanskrit College at Ennayiram in the South Arcot district was well-known as a recognised seat of Vedic studies. The rolls of its *alumni* were strengthened not inconsiderably by learners from the North. The districts of Tanjore, Chingleput, Chitaldrug, Shikarpur and Guntur, had in those glorious days a number of educational institutions where the study of philosophy and grammar, of arts and sciences, was pursued by scholars from all parts of India. Thus the Peninsular plateau and the Gangetic plain were linked up by their culture-centres which provided opportunities for the varied expressions of the Indian mind to build up an intellectual brotherhood that for centuries was a unifying force in the cultural life of the people. Indeed, in the world of learning the whole country was one.

The three principal forms of the visual art of India are united by their common aim to fulfil the spiritual intention of Indian culture. They express not so much the mere exterior of things as their interior profundities, their psychic significance. A soul state, an inner experience or a light of the Infinite is what they seek to reveal. In the delicacy of line in painting, in the

suggestiveness of plastic figuration or in the opulent magnificence of sacred architecture, the one thing that strikes us is a tendency to achieve that noble aim. In style and technique also there are many points that are identical in works of art produced in places at long distances from one another. In painting, whether in Bagh, Sittannavasal in the South or Sigiriya in Ceylon, the dominating style is that of the Ajanta masterpieces. The tradition continued, however indistinctly, in the Rajput and Pahari miniatures; and not a little has it been a source of inspiration to the neo-Indian School of Painting in modern times. In sculpture the Dhyani Buddha of the North cannot be distinguished from its southern figuration and it does not differ much even from its Javanese adaptation. There are many characteristics common to the Sarnath and the Mathura Schools of Sculpture and their widespread influence is clearly discernible, that of the former in the work of the plastic art in Bengal, that of the latter in the sculpture of the faraway Sind. The art of ancient India had its heyday during the Buddhist age when the Buddhist monks made no sectarian distinction in their choice of subjects. It was not unoften that they painted and sculptured Hindu themes. And instances are not rare of Hindu artists working on Buddhist subjects.

A peculiar tendency of the builders of ancient India was to make free use of any style or technique, if it would enhance the beauty of their work. Thus the sacred architecture of India owed very little of its

origin and development to a particular creed or cult. No definite idea can therefore be conveyed by designating any type of Indian architecture as specifically Buddhistic, Jaina or Brahminical. The Vedic sacrificial altars and the *mandapam* (Porch) are common to temples in the North and the South. The Buddhist *stupas* (mounds) were adapted from the archaic Vedic mounds. The north Indian *nagara*-shrines of Shiva and Vishnu influenced enormously the Jaina temples at Khajuraho. The forms of Chalukya or the later Haya-sala order were indiscriminately used for Hindu or Jaina shrines. Many Brahminical shrines adopted the style of the barrel-shaped Vesara temples of early Buddhist uses. The monolithic temples at Mahavali-puram are lineal descendants of the earlier Buddhist Viharas. Many features of the *shikhara*-temples of the North are unmistakable in the Mahabodhi temple in Bodh-Gaya. If architecture is the matrix of all arts and crafts, it is more so in India whose temples and cave-cathedrals with all the decorative beauty of their sculpture and painting are the very embodiment of the integral vision of art that came to the builders of ancient India. Evolved out of spiritual conceptions, they have stood through the ages as the principal visible and material record of the cultural evolution of the race, as the symbol of the unity of its godward aspirations.

IV

The attempt so far has been to make a brief survey of the cultural unity of India in the early days of

her history, which grew and developed not always as a result of any conscious effort but largely under the impact of forces that were released by the creative endeavours of the people, their inborn spirituality inspiring them all through. It may now be seen what India was able to achieve towards the political unification of the country. As in their religious and social thinking, so also in their political idealism the ancient Indians always showed a tendency to value freedom above everything else and to so build the political structure that it might provide every member in it with ample freedom of self-expression. The governing idea was not to strengthen the framework by imposing rules from outside as was done in periods of decline, but to allow every man to grow into the fullness of his creative possibilities by which only is a country's culture enriched. It was this outlook of the Indians that contributed largely to the growth and development of their great civilisation. But individual freedom was not their only aim. The freedom of the community too was deemed equally necessary for the social progress of the people.

To the Indians, the collectivity also like the individual is a manifestation of the Divine. Their scriptures therefore enjoin upon the householder certain duties that he must discharge 'for the well-being of the community. In their idea of the state they wanted the voice of the people to dominate in all its administrative affairs. That was one of the reasons why a central authority could not fully develop in ancient

India. When the king came upon the scene he did so more as a protector and servant of the people than as an autocratic ruler.

The life of peace and prosperity led by the Indus Valley people has been already referred to. It is not yet known if they had developed any kind of political organisation. But that they had a form of corporate life is proved by the excavations which show the high order of civic amenities enjoyed by them. The earliest corporate institution of the Indians was the *samiti* or assembly, mentioned in the Rig Veda, which was constituted by representatives from a group of villages under its jurisdiction. Its function was to conduct every work of administration, social, political and religious. This idea of *samiti* is the seed of all the democratic institutions evolved in India in the past. It did not grow into an unwieldy structure. Its smallness was its sustaining virtue that kept up its vitality throughout the ages in spite of the various disrupting forces that swayed over India. The village assemblies of today, the *Panchayats* as they are called in popular parlance, have descended from their prototypes in ancient India.

With the expansion of Aryan civilisation there arose the idea of territory, *janapada*, which gradually developed into a territorial state, *janapadarajya*, and then into a great territorial state, *mahajanapadarajya*, with a king more secure in his position than ever before. These states were most of them of a republican character. But all the time the autonomous

forms of local bodies in the villages continued. Social life in the Vedic times was one of happiness and all-round prosperity. It was the splendid youth of humanity in India to which the vision came of the divine destiny of man and of the essential unity of all existence. It is not difficult to visualise from the stirrings of a new intellectual life in the age of the Upanishads that a happy and contented but more organised social life was there to stimulate those spiritual and cultural activities of which the Upanishads give a vivid picture. Ideal kings like Janaka were the protectors of the people.

The epics testify to the existence of many prosperous kingdoms where abundant wealth and continued happiness combined to produce a condition of society that was, as they called it, "the envy of the gods." The essential historical significance of the Ramayana is that it is a record of the expansion of the Indo-Aryan culture to the south, that was effected by a series of cultural and military campaigns which were perhaps the second of their kind, the first being those of Bharata who had extended the Aryan supremacy and absorbed most of the non-Aryans into the Aryan fold. The sense of territorial unity under the aegis of a single culture which began to grow as a result of the campaigns of King Bharata is found to be more developed in the Ramayana. But it had its further flowering in the Mahabharata which reflects the evolution of empire, the first of its kind in India, out of a host of petty states fighting for

supremacy with one another. Problems of social and political unity are tackled in this epic with consummate mastery. The fusion of clans and tribes, not wholly Aryan, into the social structure of the Hindus is another important event that took place in this period, when the affirmation of the ideals of Dharma, the religious, ethical, social, political, juristic and customary law, organically governing the life of the people served as an effective check on any arbitrary abuse of sovereign power by the king. Any violation of Dharma by the king was severely dealt with. Not to speak of deposition, Manu prescribes even death for the king who would infringe the Law. Thus the majesty of Dharma asserted itself in its own right as greater than that of the sovereign whose sole duty was to administer the Law faithfully and to look to the strict observance of its every injunction both in the individual and the collective life of the people. In this way a common Dharma, a common culture administered by a benevolent king and followed by a dutiful people helped to build up a social and political integrity which gave to the state all its power and vitality.

But the state did not expand beyond certain limits; neither was there any organised attempt at mutual co-operation with others for the formation of a confederacy or a league. Though the ideal of an all-India Empire, *chaturantarajya*, and a feeling of kinship regarding all Aryans or Indians as one people was always there, yet in practice it was a kind

of regional patriotism that remained strong and active. A territorial synthesis, broadbased on a common culture, was all that could and did exist under the conditions prevailing in the period, but a vast empire ruled by a single power or a league of states was far from a reality. Each state valued its own independence as a sacred thing and would resent any interference with it from outside, thereby allowing no neighbouring state to grow into a big power so as to be able to assert its suzerainty and form a strong central government. An excessive love of regional freedom made these states selfish and blind to the wider interests of the whole country with the result that by their mutual dissensions and disunity they exposed the country to foreign aggression and could never take a united stand against it. There were of course other reasons why India then was not able to build political unity in the strict sense of the term. In the beginning of the sixth century B. C. we find that northern India was divided into sixteen independent kingdoms. There were also a number of republics and tribal territories. But no strong power was there to combine them, at least against any invasion from outside. Hence, the way was prepared for the Persian conquest and then the campaigns of Alexander.

The rise of Buddhism was a notable event in the history of ancient India having important bearings on the then social and political life of the country. Its permanent contribution however was more

cultural than religious, although for a long time it figured as a popular form of religious idealism. The abundant creative energy, released largely by the regenerating influence of Buddhism, especially when its Mahayana school arose accepting the Yoga and Bhakti cults of Hinduism, broke into a myriad expressions in art, literature and philosophy; and there emerged a new order of religious communism, conceived after the pattern of the republican institutions of the Hindus. But the yet greater service Buddhism rendered to the cause of Indian unity was that it broke down the racial barriers that still existed in the country and cleared the spiritual atmosphere of all kinds of superstition and priestly obscurantism and bound together in closer ties of sympathy the whole political organisation of the Aryans and by all these helped to lay the foundations of the great empire of the Mauryas.

The Maurya empire constituted the first systematic attempt to unify India politically into a single state with a central government. But the authority of Chandragupta Maurya, whose empire extended over almost the whole of India, does not appear to have been exercised everywhere in the same manner or in the same measure. True to their love of freedom and of fair deal, the Indian conquerors do not for the most part displace the rulers whom they subdue. The empire of Chandragupta included feudatory kingdoms, and there were instances of independent rule too. The old form of local self-government

continued in the villages: and all these, despite the injunction, given in his *Arthashastra* by Chandragupta's Prime Minister, Kautilya, that power of all kingdoms or bodies included in the state should be reduced to a minimum. Chandragupta's was an efficient rule though there was an element of auto-cracy in it. To him however goes the credit of being the first to build a great all-India empire. But a unification of it as a political necessity was not there.

Conditions with regard to this particular problem were no more favourable during the reign of Ashoka who followed neither the Dharma of the Aryans strictly, nor a policy of high statesmanship like Chandragupta's. In all that he did he was no doubt inspired by a large vision of human fellowship, the largest indeed of its kind that has ever come to any monarch in history, but it cannot be said that Ashoka had that political wisdom and that far-sightedness which were necessary for an emperor who aspired to be a universal sovereign, Chakravarti-Raja. The signs of disintegration that were seen in his empire—greater in extent than that of Chandragupta's—were not a little due to his pacific attitude that began to guide the imperial policy after the Kalinga war. His declaration of repentance for the sanguinary massacre he had committed in that war as well as the change of his royal policy of conquest by military force to that by the Dharma of the Buddha does no doubt raise him in the estimation of the

world as one of the greatest benefactors of mankind, but in the world of politics they were more or less acts of tactlessness, if not blunders, that led to political stagnation and gradually to the decline of the empire. If Chandragupta depended more on statecraft than on Dharma (as defined by the ancient Indo-Aryans), Ashoka depended more on Dharma (which was a kind of ethical idealism emphasised in Buddhism) than on statecraft. Neither could he discharge the duty of a king which, according to Hindu polity, demands a combination of both. Chandragupta did build a strong central government but he could not gather into it all the threads of its constituent parts; whereas Ashoka by propagating noble ideals was able to bring about some kind of unity in his empire founded on justice and righteousness, but he failed to develop a supreme power at the centre so as to utilise that unity for the purposes of practical politics. Hence the Empire of the Mauryas, which indicated great possibilities, began to be dismembered soon after the death of Ashoka, and its vastness was not possible for any emperor of India to recover for nearly the next two thousand years. Nevertheless the Maurya emperors did try with all their might to discharge the duties of kingship as defined by Kautilya in the *Arthashastra* in which a significant passage runs thus: "In the happiness of his subjects lies the king's happiness; in their welfare his welfare; whatever pleases him he shall not consider as his good, but whatever pleases his

subjects he shall consider as good."

But if the Mauryas, owing to conditions over which they had no complete control, were unable to unify effectively their vast empire, they must however be acknowledged as having helped not only to keep up, but also to infuse a fresh strength into, the social and cultural solidarity that had been already there among the people belonging to various sects and clans and tribes,—a fact which is attested by the vivid picture of the India of the time left by Megasthenes. "The Greek Ambassador observed with admiration the absence of slavery in India, the chastity of the women and the courage of the men. In valour they excelled all other Asiatics; they required no locks to their doors: above all, no Indian was ever known to tell a lie. Sober and industrious, good farmers and skilled artisans, they scarcely ever had recourse to a law-suit and lived peaceably under their native chiefs. The kingly government is portrayed almost as described in Manu." There is no doubt that this high moral tone of the general character of the people was an expression of their ingrained spiritual nature for the development of which necessary facilities were provided by the administration under the chiefs; which was conducted according to the traditional injunctions of the Dharma Shastras. Politically, the largeness and extent of the empire did not last long, but culturally, the reality of its oneness—the oneness of the whole of India—was a growing phenomenon which seems to have been

accentuated and accelerated rather than disturbed by the onslaughts that fell upon the country from outside not once but many times in her history.

With the break-up of the Maurya empire followed a period when small independent states rose again but they had no friendly political relations with one another so as to enable them to combine against the irruption of the Central Asian hordes, the Shakas, the Kushanas, and the Hunas, which began and continued for a long time. Many of these nomadic tribes settled down in India, adopted any one of the religions of the land and were later absorbed into the social fold of Hinduism. But these invasions did not, because they could not, affect the basic cultural unity of the people, though they made the problem of political unity a little more difficult of solution. The next great empire was that of the Kushana king, Kanishka, extending over the whole of northern India in the first century of the present era, but it is not known how far its oneness as a political entity was achieved.

A few instances of the above-mentioned Indianised foreigners including the Greeks may be cited here. The Greeks who made India their home embraced either Hinduism or Buddhism. Among the missionaries of Ashoka there were a number of Greeks one of whom named Dharmarakshita was sent to Gujarat. Evidently they were Buddhists and well-versed in Buddhist lore. Greek kings like Menander and Hermaios became staunch Buddhists and their example was followed by a number of their countrymen.

Menander is immortalised in the celebrated Pali text *Milindapanha* or "Questions of Milinda" (Menander), which is one of the most notable books in Buddhist literature. Many Greeks became devout Vaishnavas. Heliodoros, a Greek statesman and for some time a scholar in the University of Taxila, called himself a *Parama-bhagavata*, a staunch Vaishnava devotee, in an inscription on a *Garuda* pillar (the Besnagar column) which he erected in Vidisha, the Malwa capital, where he came in the second century B.C. as an ambassador of the then Greek king of Taxila. Among the immigrants from Central Asia who contributed an important element to the Indian population in several provinces, the Scythians were completely Indianised within less than two generations. They adopted purely Hindu names such as Rudradaman, Jayadaman, etc. The third king of the Western Kshatrap dynasty was an enthusiastic admirer of Hindu culture and religion. In an official document he proudly proclaims himself as a pious Hindu and an ardent patron of Sanskrit language. It is interesting that while his contemporaries, the Brahmin Shatavahana rulers of the Deccan, were using Prakrit language for State purposes, Rudradaman himself was using Sanskrit for the purpose. The second ruler of the Kushana dynasty bore a foreign name, Wima Kadphises; but he was a staunch Shaiva. Shiva alone appears on his coins where the king describes himself as a *Parama-maheshwara*, a great devotee of Shiva. His successor Kanishka was a well-known Buddhist

and a famous patron of Buddhist learning. The Hunas who invaded northern India during the fifth and sixth centuries were completely Hinduised. Mihirakula, the second ruler of the dynasty, was a Shaiva zealot. Inscriptions say that he used never to bow down his head before any deity other than Shiva. On the coins of this ruler, we find the Bull of Shiva and the inscription, 'Victory to Shiva'. These facts indicate the dynamic influence of Indian culture, the catholic outlook and the assimilative power of the Indian society of the time.

In the fourth and fifth centuries the Gupta emperors appeared strong enough to consolidate their empire under their paramount authority. They possessed grit added to a kind of robust optimism about the success of their mission to revive the traditions of the Indo-Aryans in every sphere of the national life. Inheritors of a great past, they conjured up a vision of the glorious days of old and strove to bring them back by encouraging all kinds of creative activity in the country with the result that India attained during this period to the highest degree of her excellence in the realm of arts and letters. Hindu culture was again in the ascendant and took its classical turn, though there was no dearth of Buddhistic learning. The administration was marked by tolerance and efficiency. It was conducted according to the laws of the *Smritis* which emphasise that a good king should be particularly careful to win the heart of his subjects by respecting their wishes and promoting their welfare.

That the rulers ordinarily lived up to this ideal is testified to by the Chinese pilgrim Fa-Hien who in his account says that the people were virtuous, happy and prosperous, and had no occasion to complain against the autocracy and high-handedness of the government.

A notable feature of the movement ushered in by the Guptas is that it sought to re-assert the Aryan intellectual and political supremacy. The military achievements and wise statesmanship of Samudragupta as also of his son Vikramaditya who succeeded him strengthened the integrity of the empire, a picture of which is given by the great poet Kalidasa in his *Meghadutam* in which he describes the oneness of India in vivid terms. A remnant of this political unity of the Gupta empire even after its destruction by the White Hunas, is seen in the confederacy—perhaps the first of its kind that we come across in the historic period—which was constituted by the rulers of some of the small kingdoms under the leadership of Baladitya, the king of Magadha, to drive away the Huna king Mihirkula.

Harshavardhana, who early in the seventh century became the lord paramount of the north, showed a remarkable combination of the attributes that go to make a true sovereign. By his victorious campaigns and his strong arm of authority Harsha was able to bring about a working compactness of his empire, but it is difficult to agree with some writers that his empire was firmly consolidated. Had it been so, it

would not have broken up soon after his death. It must however be said to his credit that after Ashoka he was the only emperor who helped in strengthening his empire on the basis of religion and righteousness by convoking the great Assembly or Congress at Prayag every five years to which all Indians, irrespective of caste, creed or religion, were invited to perform their religious rites, for which every facility was provided by the king. Like Ashoka, Harsha also was generous to a fault. He used to empty the royal treasury every five years by lavishly distributing gifts and alms in the Assembly. It was not certainly a wise policy on the part of a king. Huien-Tsang testified that during this period all religious communities lived in peace and amity and that the country was everywhere prosperous, and the moral standard of the people high. Harsha's reign witnessed the university of Nalanda at the summit of its glory.

It is true that during the classical age controversies were frequently taking place among ambitious exponents of different schools of thought, but that did not detract from the spirit of toleration and harmony that prevailed among the people belonging to various sects, orthodox and heterodox. A few instances of it may be cited here. The Gupta emperor Samudragupta studied Buddhism in his youth with 'interest and partiality'. He entrusted the education of his son to the famous Buddhist scholar, Vasubandhu. The Buddhist king Damodaravarman of the Ananda dynasty performed the Hindu ceremony of Hirnyagarbha.

The pious Hindu Nathasharman and his wife, of Bengal, made permanent arrangements for the proper worship of Jaina Arhats. The sister, daughters and and daughters-in-law of the Hindu king Shantamula were all Buddhists. The Kadamba kings performed Ashwamedha sacrifice according to the Vedas and made grants to a Jaina establishment. Contemporary Jaina records pay the best tribute to the administration of the Guptas who were orthodox Hindus, and who on their side, extended their utmost patronage to the Buddhist university at Nalanda. The great Pala king of Bengal, Dharmapala, a Buddhist, performed Vedic sacrifices and offered liberal gifts to the Brahmins who conducted the sacrifices on his behalf. His Chief Minister was a Brahmin, members of whose family became for many generations the Chief Ministers of the Buddhist Pala kings after Dharmapala. It is said that Dharmapala granted land for a Narayana temple of the Hindus. There was also complete harmony among the different sects of Hinduism of the time. A staunch Bhagavata like Kumaragupta performed the Ashwamedha sacrifice. Rajamitra concluded his Vedic sacrifice by a donation to a Shaiva temple. A fifth century inscription in Mysore says how people regarded Brahma, Vishnu and Shiva as the different aspects of one and the same God. Later, the eclectic Harshavardhana distributed his devotions among the three deities of the family, Shiva, Surya (the Sun) and the Buddha. Bengal through her Tantrikism made the largest

contribution to the movement¹ that led to the absorption of Buddhism into Hinduism, of which the outstanding result was the acceptance of the Buddha in Hinduism as one of the ten incarnations of Vishnu. The earliest literary mention of this is found in the *Gita Govinda* of Jayadeva, one of the greatest poets of medieval Bengal. Buddhist influence can still be traced in many of the religious rites and ceremonies of Bengal, although the Buddhism of Bengal was almost a new creation of her own, different in many respects from the Buddhism of the North, and mainly based on her Tantrik ideas. In the same way Jainism also was absorbed in Hinduism. Shaivism, too, had a part to play in this interfusion of cults in Bengal. These facts undoubtedly reflect the religious tendencies of the times, that indicated the possibilities of a larger synthesis which could not then come about but was certainly to be a reality in the future.

Harsha's death was quickly followed by the disruption of his empire and the rise of numerous independent states always at war with one another. The narrative of their internal dissensions—evidence of political weakness—does not throw much light on the greater problems of Indian history. They however point to the fact that the country was divided against itself and was rendered open to foreign aggression. The Pala and the Rajput kingdoms in northern India deserve mention. In its first century the empire

¹ For concrete instances, see Chapter III of the author's book, *Cultural Fellowship of Bengal*.

of the Palas of Bengal extended over almost the whole of northern India, from the Punjab to Assam. According to Monghyr inscription, it included a part of the south too. But Bengal and Magadha only were under their direct rule. The local rulers of the rest of the region submitted to the authority of the Pala emperors, paid tribute to them, and were allowed to continue their rulership. The next three centuries were for this empire a period of ups and downs. The Pala rule, however, is remarkable in Indian history for more reasons than one. It started with an event that indicates how in the eighth century Bengal rose to a sense of her political unity and expressed the democratic tendency of her body politic. For Gopala, the founder of this dynasty, became king by the consent and will of the people. No other dynasty ruled over northern India for four hundred years at a stretch,—a period which witnessed among other things a marvellous outburst of the creative genius of Bengal. The Pala kings were all of them ardent patrons of learning, as also the most liberal of the Buddhist emperors of India. The Rajputs were the Hinduised Hunas, Shakas and Pallavas, merged in the older population. About this period the Chalukyas flourished in the Deccan, and long after them the Cholas ruled over practically the whole of southern India; but it was not exactly a big empire that they were able to build or perhaps it was not their ambition: whereas the definite aim of the emperors in the north, noticed above, had been to extend their suzerainty

over a vast dominion and be its paramount lords.

Early in the eighth century when the descendants of the Rajputs, called the Gurjara-Pratiharas, were ruling in the eastern Rajputana and Malwa, an important event took place in the coming of the Arabs into India and with it began the play of new forces in the social, cultural and political life of the country. The conditions that were indirectly the cause of this foreign invasion proved more favourable than they had been before when mainly the absence of political unity among the different states was taken advantage of by the aggressors. But on the eve of the Muslim conquest India was not only more weakened than before by disunity and discord among the small states, but also she lacked social cohesion and solidarity.

The rise to power of the Rajputs in the north where Muslim invaders had their first footing gave an impetus to the resurgence of the orthodox forms of Hinduism. The Brahmin came upon the scene, with his hold on the society considerably strengthened by the connivance of the powers-that-be. The result was that the system of caste, which had been elastic and in places rendered even inoperative under the impact of Buddhism, began to revive and be rigid again and large numbers of people, whose problems the society did not care to solve, were condemned to a life of indignity; and the process which also was started by Buddhism of assimilating to the social organism many tribes and peoples of mixed race-

origins could not make any progress owing to deliberate opposition by the so-called custodians of the society. This policy of obscurantism was responsible for a social disintegration and for the creation of a class of people who were in perpetual revolt against the society. It is these disaffected people who supported Muslim invasion. The Jats and the agricultural classes who helped Muhammad bin Qasim in invading Sindh did so not out of any love for the conqueror but to wreak vengeance on the Brahmins, whose tyranny they could not forget, and especially on king Dahir, the Brahmin usurper of the throne of Sindh whose previous king was a Buddhist. The antagonism between the Brahmins and the Buddhists contributed no less to the social demoralisation. Besides, Buddhism by its huge monastic organisation tended to sap the manhood of India. The conquest of Sindh by the Arabs was made easy by the fact that thousands of the male population had adopted the yellow robe for the sake of the easy life of the monastery. The unity of India in the world of culture was of a too subjective nature to be a safeguard of any practical value against political onslaughts from outside. It was there no doubt, as it is even today, but since the whole country was politically in a state of decline, it could not prove a source of strength, for which a sound external life, the objective expression of an unbreakable organisation of unity, was the first condition.

But India began to drift off into a state of

decadence not only because she was weak in her political and social life but also because the light of the integral spiritual ideal which in the days of her glory had illumined every activity of her life to the health and puissance of an intrinsically powerful race, was beginning to be dimmed in her consciousness by the rushlight of a mere ethical idealism. Indeed, nothing precipitated the decline of the country so much as the acceptance by it of the anti-pragmatic ideal of monasticism and other-worldliness, which was inculcated in Buddhism. Political changes affect more or less the surface life of the country; they cannot touch its inner life, though under favourable social conditions man can express himself more freely. But there is no worse calamity for a nation than when it deviates from the ideal which it is its destiny to fulfil—its Swadharma.

Shankara may have had a vision of the true spirit of India; but in his effort to rehabilitate what he considered to be the ancient monistic cult, the Brahmapada of Upanishad, and to counteract the evil effects of the degenerated form of Buddhism, he also stressed the evanescence of life and could not, in spite of the deep spiritual character and fervour of his teachings, reveal to the country its real creative soul. He was not able to discover that harmony between spirit and life by which alone the problem of India, nay, all human problems, can be solved. The Brahminical revival, of which Shankara was the moving spirit, could not go beyond giving a reorientation to the religious con-

sciousness of the Hindus: it had not in it the power to rekindle the ancient lamp which alone could throw light on India's path to her goal. It was a period when the body politic of the country was showing signs of exhaustion and when even the greatest thinker of the time was found unequal to the task of reconstructing her life on the basis of the true truth of the integral ideal for which India has stood through the ages. Nevertheless, whatever its ultimate effects, the *digvijaya* of Shankara brought together the four corners of the country into the surging impulse of a new spiritual awakening, and the artistic and literary activities of the people continued without being very much affected either by the illusionism of Shankara or by the conditions in the external life which were not however wholly favourable to them. It is these creative efforts of the race that kept alive the soul of India, her inner unity, her cultural oneness.

V

The running survey made so far of the development of politico-cultural unity in India reveals an undeniable polarity towards the perfection of a diversified oneness in the self-expression of her soul and life. A manifold aspiration in the national being, an immense diversity of forces striving to realise that aspiration, an equally immense array of forces opposing, and by opposing inevitably helping that realisation, this is the spectacle India presents to the perspicacity of a

sympathetic historian. Here is no Egypt or Chaldea or Greece with her harp of being casting forth marvellous strains of single melody. Here is a symphony in the making, a rich and grandiose symphony into which, through long centuries, diverse notes, diverse strains, diverse, even contradictory rhythms have entered and combined and clashed and recombined to enrich the ever-swelling volume of music.

The political history of India would have been wholly different had the States of the North united to offer a determined resistance to the invading Persians. If the successors of Chandragupta Maurya had been able to carry on his consolidated sovereignty, India would have been spared the convulsive depredations of the foreign hordes. Had the orthodox canonists of Hinduism been a little less stringent in their interpretation of the social rules, Indian cultural unity would have easily achieved a more homogeneous self-expression and it would have paved the way for a political unity also.

But these "ifs" are the speculations of the unthinking historian to whom India is but a tissue of tantalising paradoxes. It takes the placid, probing vision of a wide sympathy and inner affinity to unravel the mystery of India's growth and decline and resurgence and progress. Indian life has always teemed with problems of all sorts and it has been her constant endeavour to arrive at a triumphant, abiding harmony through a perfect solution of all of them. Now she attempts a movement of expansion, embraces vast spiritual horizons,

compels discords into concords, sweeps forward in love and amity and compassion to help and heal the world, lavishes her treasures of wisdom on all who are ready to receive them; now she retires into herself, limits the field of her vision and action, seems absorbed in unravelling some inner skein or slowly, cautiously developing some new strain out of her soul. The threads she drops today she picks up tomorrow; she falls back upon her past and again with a sudden violent start launches forth into the future. But the invariable trend of her genius has always been towards conquering, integral, consummate unity.

The saints of the middle ages sang the unity of existence and taught the universality of love. They evinced a remarkable breadth of vision and proclaimed that all religions are essentially one. The lyrical mysticism of of Sufism—a delicate blossom of Indo-Saracenic marriage—pulsates in the songs of many of these medieval minstrels of the Spirit. It is interesting to note that most of them were of low origin and that they had as their disciples men and women of all denominations. The lives and the mystical trend in the teachings of these inspired saints gave a new orientation to the spiritual endeavour of India; their wide popularity indicated possibilities of a larger synthesis in the social and religious life of the people. In Bengal there was evolving a new kind of synthesis¹ out of an interfusion of cults derived from Buddhism, Tantrikism

¹ See Chapters III and IV of the author's book, *Cultural Fellowship of Bengal*.

and Vaishnavism, Islam also playing its part in this diapason. In fact, a time came when Hindus and Muslims in Bengal were very near opening into a common cultural consciousness.

After Ashoka it was Akbar who as an emperor felt in himself the deep urge of India's soul towards the oneness of her national being. He built up and consolidated a vast empire and cherished dreams of a compact cultural and political unity. But it was destined to be a fugitive dream and whatever solidarity had been achieved began to slacken and disintegrate in the inefficient hands of his short-sighted successors. India gave up for the moment the expansive movement and plunged into intense regional whirlpools. Yet the salient elements of Saracenic culture had already been woven into the texture of the country's life. Shivaji rose and with him arose again the idea of unity. His short career was a meteoric blaze of astute statesmanship and burning patriotism. A thrill passed through the nation, its limp body became tense with the energy of expectancy and fervour. But the wave soon spent itself and an ominous hush fell upon the country. The next notable attempt, a daring and dazzling one, was made by Guru Govind Singh. His Khalsa was a startling feat of militant nationalism wedded to religious ardour, and there was in it an echo of the democratic spirit of Islam. It was a 'fellowship of equals' to which the people impetuously dedicated themselves fired by a new-found sense of their strength and solidarity. The

result was magnificent and thrilling but unavoidably short-lived in its burst of splendour. And the country sank again into a politico-cultural apathy and gloom.

Last came the assault of Europe and the yoke of England. A few earthquake shocks, to be precise, a few slight tremors, and the whole of the land lay at the feet of the alien conquerors, supine, but united in stunned subjection. A unity was achieved, a many-sided unity that had never been possible before, though it had yet to be fuller and more abiding for the growth of India towards her goal. The problems that faced the country at this stage of her evolution were the rousing of the people, the discovery of the true truth of her ancient culture, the affirmation of the spiritual ideal for which India has stood through the ages. The bondage of a foreign rule accentuated by a relentless exploitation of her proverbial wealth created discontent in the country. Discontent broke into struggle, struggle led to the awakening of the Leviathan. Besides, the impact of Western civilisation and progressive thought made India sceptical and curious. For a time she rejected her past as outworn and dead, and blindly imitated everything foreign. But as she grew in her curiosity she wanted to know and master the truths not only of Europe but also of her own cultural heritage. There were then born that radiant band of dynamic personalities, the spiritual architects of the nation's later glory. The signs of a general stirring of life began to be visible in the land and it was unity that loomed

large and clear on the distant horizon.

Rammohan Roy with his unerring intuition perceived that the soul of India responds only to the truth of the Spirit and he called upon the people to unite in the indivisible oneness of the Brahman. His was a mighty call, a great rallying cry that rang from one end of the country to the other. Many an invidious distinction of society was swept away by the flood of his reforming zeal. India learnt anew to look within, to return to her own self and find in it her own line of development, also assimilating what she received from the West. Then came Keshab Chandra Sen, a more magnetic but less Olympian spiritual genius, driving Rammohan's work deeper into the consciousness of the people. Dayananda, a towering and dynamic figure, attempted a revival of the Vedic past in the changing present. He shook the superstitious sluggishness of the people and directed them to the glory of ancient India. He did a great spade work and left the field considerably prepared for the next sowing. His principle achievement was the unsealing of the Vedic lore—the perennial well-spring of Indian spirituality and culture—which none of his predecessors had ever dreamt of doing.

The source of unity was now glimpsed, but rather dimly and from a distance, and the way had yet to be discovered to reach that unity and bring it down and out even into the external active life of the nation. To help effectuate that came Sri Ramakrishna

with his gospel of the unity of all religions in the spiritual life of every individual. A colossal synthesis silhouetted itself against the background of a growing clarity and catholicity, and the jangling discords of the sects seemed for a moment to be dissolving in an all-embracing diapason of the oneness of all existence and all creatures, above all, in the inalienable oneness of India. And to vindicate the dynamic reality of this unity, Sri Ramakrishna gave to the world that heaven-born soldier of Light who spoke in the accents of the gods and worked with the force of fire—it was Swami Vivekananda. The Master thundered to the Disciple: “Fie upon thee, thou avid of personal salvation! I thought thou wouldst be like a great banyan tree giving shade and shelter to thousands of weak and weary souls wallowing in ignorance! Thou hast come to do the Mother’s work and do it thou must. Here, I keep the key of Samadhi with me, thou wilt not have it again till the Mother’s work is accomplished.” Astounding words these in the mouth of one who had himself realised the Nirvikalpa Samadhi of the Vedantins. They ushered in a new dawn of action and awakening in the land which was still ridden and heavy with the negation of the ascetic. The door was thus slammed for ever upon the escapist tendency of the sannyasin and an unbanked immensity appeared in the front—a rich field for the harvesting of an integral perfection of man here upon earth, *ihaiwa*. The essential unity of the Vedantic realisation was wedded to the

unity in diversity of the Tantrik vision. A stupendous synthesis was achieved that would prepare the country for a larger and deeper unity—its goal and future destiny.

What then is that unity—the integral unity India has been dreaming of and developing throughout the ages? It is the unity of the Spirit fully expressed in the unity of Life. All men are one, nay, all creation is one, not yet, it is true, in the outer structure and facts of life, but eternally in the Spirit. Man has, therefore, first to travel beyond the apparent divisions and distinctions that delude him, and attain that in which all differences meet and merge for ever. That is the eternal essence and substratum of all this diversity of the universe. That attained, man will feel himself existing in all and all in him; he will become the universe and yet remain transcendent of the universe. He will become one with the one all-pervading Reality. He has next to translate this unity in terms of his mind, life and body. A perfect expression and enjoyment of its blissful unity in the manifoldness of the universal existence is what the Spirit seeks in creation. It is this integral unity—unity in the supreme Light and unity in the splendid play of Life—which India has been evolving variously through countless vicissitudes in her inner and outer existence. This is the truth that gives meaning and significance to all her age-long endeavours.

There is also a truth in the physical unity of India's form. India was hailed and hymned by the Rishis

of yore as the one land on earth which is destined to lead mankind to the realisation of its intrinsic oneness in the Spirit. She was visioned as the beating heart of the world, the creative centre from which one day would go forth not only the message of the unity of all existence but also the supreme force to make that oneness a reality in the life of mankind. It is, therefore, not unreasonable to believe that if India has the Light which will one day illumine the darkness of the world, she has also the potentiality to develop a physical body that will be a veritable powerhouse, a radiating centre of that Light. It is this integral oneness—physical, cultural and spiritual—which will be the glory of the India of tomorrow. All the ferment and turmoil of the present, however disconcerting and discouraging, are but the churning of the ocean of Force, the travail of the soul of India for the birth of a divine humanity.

It is not surely a mere freak or a phantasy of a blind chance that has produced such a glorious constellation of spiritual luminaries, one coming after another in an unbroken succession,—Rammohan Roy, Keshab Chandra Sen, Dayananda Saraswati, Sri Ramakrishna, Swami Vivekananda, Sri Aurobindo, not to mention the many giants in various walks of life—in Art, in Literature, in Science, in Politics, in Philosophy, in Education. They cannot indeed be a gratuitous gift of an inconscient Nature. The country that can give birth to such creative souls even in her hour of decline or incipient reawakening is

no hapless forlorn mother doomed to perish in an eclipse of her ancient glory, her high honour unretrieved, her message of love and harmony undelivered. The Conscious-Force who works from above and behind the frontal flux of appearances, the divine Shakti, the creative, preservative and destructive Mother-Power whom the whole world has ever worshipped in one form or another, manifests herself in India today,—yes, in spite of her present life of distress and discord, and is working out her puissant Will through a phalanx of opposing forces. The first streaks of the golden dawn have already appeared on the horizon. Led by the Mother and strengthened by her Grace, India advances towards an apocalypse of Light and Harmony that will bring into birth a new heaven and a new earth and make of the life of man a glowing epic of divine perfection.

This is the vision of the future, the vision of man fulfilling his divine destiny in a richly diversified unity of the Spirit. It is for this that India, one and indivisible in the Shakti of the Mother, has lived and suffered and laboured on throughout the centuries of her chequered existence. India is not for herself but for God and, as the chosen instrument of God, for the whole world.

CHAPTER III

Akbar the Unifier

I

AKBAR represents the acme of the political endeavours of the Muslims in India; and the success that attended his sincere and earnest efforts to build a happy and united India was largely due to the kingly virtues he possessed and brought to bear on the ways in which he tried to accomplish his great work. Rarely has a king had such a lofty and comprehensive vision as inspired Akbar; and never was a king so eminently capable of translating his vision into such a splendid series of radical acts. A unique personality, Akbar stands out as "one of the wisest, most humane and most cultured of all the kings known to history". It is not for us to crab and carp at his political career or merely to single out his defects and shortcomings in order to pass a summary verdict of failure on him, as has sometimes been done by narrow historical criticism; nor is it our aim to study him with a mind biased

by considerations which are outside the scope of impartial history. No doubt accuracy demands a searching enquiry into all the problems which are associated with his rule, and even a dissecting analysis of the motives that actuated his policies and measures, but what is of paramount importance is that the attention of the historian must be focussed not upon the side-issues and stray events but upon the central drift and significance of his life and work, the cardinal conception and creation of his administrative genius—the political and cultural unification of India. Akbar stands or falls upon this single bed-rock fact of his reign.

Akbar in the outer expression of his nature was first and foremost an empire-builder: but in the inmost core of his being he was a seeker, and his seeking deepened with age and persisted through life, possibly because he never reached the end of it. It cannot be gainsaid that he was the architect of a vast empire, a tireless promoter of human fellowship, the inaugurator of an era of remarkable cultural activity; but history says very little about the 'inner man' in Akbar, his characteristic cast and insistent creative impulse. The religious reforms that he tried to introduce are generally interpreted either as expressions of his earnest desire to bring about a religious synthesis or as his deliberate intention to shake into sense the orthodox canonists of Islam who felt very much scandalized and shamed by Akbar's open-hearted acceptance of truth from whatever source it came to him. But these

do not take us deep enough into the inner working of Akbar's nature, a revealing glimpse of which, however, we get in the following incident. When he was a mere boy of fourteen, one day he suddenly left the splendours of the Imperial Camp and, unnoticed by anybody, rode out all alone into a vast wilderness. After a while, when his *entourage* missed him, search parties went out in all directions. One of these noticed the boy-emperor's favourite horse, Hamid, quietly grazing on a plot of grass at a distance. The daylight was failing. The party searched all around and at last found the emperor on his knees, gazing at the vast open space in front of him with tears streaming down his cheeks. They could obtain no explanation from the emperor as to why he had strayed away from the Camp, but only succeeded somehow in persuading him to return to his anxious family and bewildered guardians.

This was not the only instance of Akbar's love of solitude and devout contemplation of God and Nature. Abul Fazl says that Akbar used often to pass the morning alone in meditation, "sitting on a large flat stone of an old building which lay near the palace in a lonely spot, with his head bent over his chest and gathering the bliss of the early hours." When he reached his twentieth year Akbar confessed that his soul was filled with exceeding sorrow from the consciousness that he "lacked spiritual provision for the journey of life." "Although I am the master of so vast a kingdom and all the appliances of government are

in my hands, yet, since true greatness consists in doing the will of God, my mind is not at ease in this diversity of sects and creeds; and apart from this outward pomp of circumstance, with what satisfaction in my despondency can I undertake the sway of the empire? I await the coming of some wise man of principle who will resolve the difficulties of my conscience." It is obvious that Akbar was in search of a spiritual guide. He met many philosophers, thinkers, scholars, Hindu, Muslim, Jain and Christian; but none of them, it seems, could give him the light, that spiritual pabulum his soul was hungering for.

Perhaps Akbar was aiming at something which he was not ready to receive, preoccupied as he was by various interests of a mundane and distracting nature. Nevertheless, his hours of meditation, his contemplative turn of mind and his thirst for truth enabled him to a large extent to control the adverse circumstances in which he found himself. Akbar was not free from the influence of the rationalism which was breaking all over the world in the sixteenth century. But in him very much more than in his great contemporaries, Peter of Russia, Elizabeth of England, and Henry IV of France, it was the religious urge that guided the trend of his action. And it was this again that helped him to transcend the bigotry that reigned rampant all over Europe in the wars of religion and in the burning of saints. On the whole, Akbar's signal successes overshadowed his failures; and it is always the calm, noble and grand monarch

in Akbar that appears to our vision prominently. It was an era of great monarchs in which Akbar lived, and our minds naturally run to a comparison between him and the maker of Russia or between him and the founder of Protestant England. This comparison is justifiable from an international point of view, but for a proper understanding of the philosophy of Indian history it is necessary that the student should dive below the surface and appraise the inner man in Akbar.

Like so many other great figures in history, Akbar was moulded less by his heritage and environments than by the native fire of his royal soul. And yet heredity and environments had not an inconsiderable formative influence upon his life and character. A descendant of the lion-hearted Babar was bound to be a great soldier; the ward of the astute Bairam Khan to be a noted statesman; the son of the broad-minded Humayun—the Rakhi-brother of a Rajput princess—to be an uncompromising cosmopolitan; and the beloved grandchild of the wise Gulbadan Banu an expert reader of human nature. The son of a Shia mother, the friend of Abul Fazl and Faizi, the beloved master of such widely differing personalities as Birbal, Mansingh and Todar Mall, the patron of Tansen could hardly be a bigoted Sunni. All these influences worked in Akbar and led him to formulate a policy of expansion and conciliation by marriage or otherwise, which was at least as successful as a similar policy of the contemporary house of the Hapsburgs.

But Akbar was greater than any of the Hapsburgs; for Hapsburgs' conciliation and alliance was strictly limited to the Catholic world while Akbar's undoubted toleration was founded on an integral view of humanity, however vague it might be.

II

Indeed Akbar owed much to these facts about his life and heritage; and his impartial attitude towards all was not a little the outcome of their cumulative effect on his character. In matters of religion this sovereign virtue of the emperor rose to its supreme height. He issued a standing declaration that there should be no interference with anyone's religious convictions, and that in the matter of worship utmost freedom should be allowed to non-Muslims. Thus while Catholics were murdering Protestants in France, and Protestants under Elizabeth were murdering Catholics in England, and the Inquisition was killing and robbing Jews in Spain, and Bruno was being burnt at the stake in Italy, Akbar invited the representatives of all the religions in his empire to a conference, had their honour pledged to peace, and issued edicts of toleration for every cult and creed, and as an evidence of his own equality, himself took part in the religious festivities of the Hindus as well as in those of the Muslims. His greatest pleasure was in a free discussion of religious beliefs, and to this may be traced "his unwillingness from the outset

to accept the theory that because he, the conqueror, the ruler, happened to be born a Muhammadan, therefore Muhammadanism was true for all mankind. Gradually his thoughts found words in the utterance: 'Why should I claim to guide men before I myself am guided?' and as he listened to other doctrines and other creeds, his honest doubts became confirmed, and noting daily the bitter narrowness of sectarianism, no matter of what form of religion, he became more and more wedded to the principle of toleration for all."

In the debates organised under the auspices of Akbar's court, the representatives of various religious sects, each trying to prove the superiority of his own faith, exhibited their own passions in wordy outbursts, the emptiness of which was too glaring for the emperor to bear. He felt within his heart that with such differences bordering on mutual animosity there could be no collective progress among his people, no real peace. He knew that all religions have their own kernel of truth, but what he could not understand was the dry, dogmatic intellectualism and polemical perversions into which they had lapsed in his days. Religious at heart, he was pained by the bitter wrangles of their orthodox apostles. It was a new, wide and impartial outlook, the emperor thought, that alone could liberate man from the cramping bounds of narrow sectarianism. A common path for all must therefore be explored which will lead man to the truth that unity and solidarity are

indispensable to the growth of a vigorous national life. While he was immersed in these thoughts there came to the vision of Akbar a light that, he thought, would chase away the darkness by which he was surrounded. He perceived that it was the king who could really be the symbol of national unity, the living and focussing centre of all the co-ordinated interests and activities of a nation's life. Loyalty to the king, he felt, would prepare and perfect the people's loyalty to harmony and unity and a concordant mutuality in the country.

It was this conception that took shape in his mind in what the emperor promulgated as *Din-i-Ilahi* or the Divine Faith. It was like an order whose members were required to be always ready to sacrifice all they had and all they were for the Padshah who was regarded as their sole protector. Thus the Divine Faith, which included the truths of various religions, assured that honour should be rendered to God, peace be given to the people and security to the empire. The conception was indeed grand, and whatever its practical application, it cannot be said that it proved a complete failure. Unity, which was Akbar's aim, could come only when, as he believed, allegiance to a great ideal was rendered in common by the people. And he tried to incarnate this ideal in himself by assuming the leadership of the people. The idea was that the people, irrespective of their creed or race, should, by dedicating themselves to the Order and through that to its supreme head,

the emperor, feel united by the same community of interests, the same ideals and aspirations, the same principles for the guidance of their inner and outer life. But Akbar did not use his royal power to force this on his subjects. There were conscientious objectors and he respected them. In fact, the emperor gave full liberty of thought to his subjects. And for the acceptance of his views he would always appeal to their conscience with all the ardour of his soul.

III

Unity is one of the central teachings of Islam, and there is no doubt that Akbar was an apostle of it. And the very way in which he tried to give form to it was by itself a marvel demonstration of human fellowship. The cultural unity which Akbar saw among his Hindu subjects helped to strengthen his conviction, born of his essentially religious nature, that a great nation would in future evolve in India taking its stand on a larger unity; and it was the truth of this unity that the emperor sought to emphasise in all that he did politically and culturally. The very fact that he persistently endeavoured to unite India even in the teeth of a tough opposition is an eloquent testimony to the ruling passion, the lifelong dream, the master-idea of his masterful personality. To Akbar's intuition this vast country was one and indivisible, one people and even one race; and he was daring enough to encourage racial intermingling,

so that a new type of humanity might be produced by this fusion.

Akbar could see far into the future. He was verily a practical idealist who commanded a vision of the greatness of India in the future, broad-based on her fundamental oneness. And if he did not live to see the realisation of his noble vision, he was of course happy to feel and find that his subjects—Hindus, Muslims and various sects and communities—were tending to grow into a common national consciousness through the recognition of the incontestable fact that the land of India was their common home and that the king was a benevolent organiser and promoter of their collective well-being.

While it is true that the membership of *Din-i-Ilahi* was confined to a sincere few of the Hindu and Muslim aristocracy, it is also true that the desire to serve the common good, which was the basic aim of the Order, made a profound and lasting impression on the masses. Thousands used to flock to the polo-ground of Fatehpur to receive the bounty which Akbar lavished upon the poor without any distinction of race or creed. When the Padshah appeared at the *Jharokaa* window of the palace every morning to say his prayers and to show himself to his subjects, crowds of Hindus assembled below in the hope of being able to begin their day with a sight of 'Vishnu's vicegerent on earth', *Dillishwaro va Jagadishwaro va* (The Lord of Delhi is the Lord of the earth).

Thus did the Hindus find in Akbar an emperor

whose magnanimity and saintliness revived in them their age-old virtue of unstinted loyalty to the king, which was one of their racial traits lying dormant for a long time. It was this spontaneous loyalty from all communities of his subjects, specially from the Hindus, which was one of the most valuable of the legacies that Akbar left to his descendants. Indeed many an achievement of the later Moghul emperors was possible only because of what Akbar had done in a spirit of broad-minded statesmanship and politico-religious equity.

Akbar would not allow the Ulemas to interfere with the affairs of the State. He disdained the idea that the religious creeds of one community, especially those of its orthodox section, should dominate the political life of a country in which there are many other influential communities forming the major population and belonging to different faiths. He abolished social evils like *sati* and early marriage among the Hindus, since he thought that life could not fully grow in a society demoralised by preposterous customs. He revoked iniquitous laws and taxes imposed on the Hindus by the previous Muslim rulers for the simple reason that religion should not be made a ground for any special impost, far less for those which stand self-condemned in the eye of God. In the midst of the jubilation of victory when spirits naturally run high and the brute impulse to sack and pillage acquire an unchallenged traditional legitimacy, Akbar showed a remarkable

magnanimity towards the conquered by forbidding all exhibition of cruelty and vandalism on the part of his troops. This was no less an act of humanity and large-heartedness than a fine stroke of statesmanship which won the hearts as well as the bodies of the conquered and made for peace, security and stability in his kingdom.

The builder of an empire, Akbar felt the need of political unity in it, and his constant concern was to consolidate his whole dominion into an inviolable integrity that would render it safe from all forces of disruption, and make it possible for the people to progress unimpededly in all directions. Akbar appropriated all *jagirs* and converted them into Crown lands as a step among others towards centralising his authority which was politically indispensable. But his success in bringing about the unity that existed in his empire came largely as a result of the way in which he gave form to his conviction that peace and goodwill are the strongest foundation of an empire. Babar and Sher Shah had tried to base their administration on this idea; but it was left to Akbar to make it the very guiding principle of his rule. His declaration of *Sulh-i-kul* (universal peace) at a time when in Europe the principle enforced was *cujus regio ejus religio* (as is the religion, such is the region), sprang from a soul that knew and lived the noblest ideals of kingship. The emperor proclaimed: "A monarch is a pre-eminent representative of God. Upon his conduct depends the efficiency of any course of action. His gratitude to his

Lord, therefore, should be shown in just government and due recognition of merit; that of his people in obedience and praise. Tyranny is unlawful in everyone, especially in a sovereign who is the guardian of the world." Every word of it rings with sincerity, reminding us of similar edicts of another emperor of India who, nearly two thousand years before Akbar, had tried to conduct his administration according to the tenets of Dharma. Akbar made the best use of all his extraordinary qualities to discharge this self-imposed responsibility; and history testifies to the success of his efforts, of which the most glowing proof is furnished by the spontaneous fealty that the Padshah received from all communities.

Akbar had as his Revenue Minister, Todar Mall, a Hindu who introduced many beneficial innovations which improved the financial affairs of the State; and the highest offices were thrown open to Hindus and Muslims alike, appointments being made on the merits of the candidates. Man Singh, who has been characterised by a Muslim historian as a Hindu wielding the sword of Islam, was one of the most trusted of Akbar's generals. There are instances, too numerous to mention, of Hindus having been placed in positions of trust and responsibility. More than half of Akbar's army was Hindu, the Rajputs being a substantial element in it. The winning of the Rajputs' loyalty was undoubtedly a triumph of Akbar's equitable statesmanship. It is because of them that millions in Northern India looked with favour on Akbar's government and

had always its welfare at heart. And greater, indeed, was their contribution to the synthesis of religions and cultures which was the most cherished dream of the emperor's life. Neither is it to be overlooked that by their acceptance of the democratic Muslim ideas of political and social organisation, the Rajputs helped in the fusion of the Hindus and the Muslims in many spheres of their corporate life. No impartial historian can fail to give credit to these pioneers of Indo-Muhammadian culture which is the greatest gift of the Moghuls to this country.

Akbar's insatiable thirst for knowledge brought him into intimate contact with many saints and scholars of different schools of thought. The renowned Muslim saint Shaikh Salim, the famous mystic Dadu with whom Akbar had a discussion for forty days, the Sufi free-thinker Mubarak who was well-known for his knowledge of the literature and philosophy of Greece, the Brahmin Pandit Purushottam, the Jaina scholar Hiravijaya, the Parsi theologian Dastur Meherji, the Jesuit Father Rodolfo were only a few out of a large number of thinkers and saintly personalities of the time, with whom Akbar used to have free exchange of views regarding philosophies and cultures of which they were then the recognised exponents.

The emperor was also keenly interested in science and history. "Among the books of renown," says Abul Fazl, "there are few that are not read in His Majesty's assembly hall; and there are no historical facts of the past ages, or curiosities of science, or

interesting points of philosophy, with which His Majesty, a leader of impartial sages, is unacquainted."

Thus sumptuously fed and nurtured upon the treasures of wisdom, Akbar's mind developed a large synthesis in its essential cast and outlook, and a love of culture and refinement. We find the former expressing itself in the new idealism propounded by him out of the fundamental truths of all religions, and the latter in the wonderful forms of arts and letters that grew under Akbar's fostering care and gave to the Moghuls all their greatness and glory. Indeed, the emperor was an enthusiastic patron of every kind of cultural activity and the creative energies of the Hindus and Muslims broke into a combined endeavour to produce what may be called a new and composite expression of Indian culture.

Akbar dreamt of an all-India empire. Evidently, such a dream could not be realised but by the suppression of local independence and the welding of the provincial principalities into a systematic central control. But as it was not the dream of a politically ambitious ruler like Alexander but that of an idealist lover of India and her people and culture, it entailed little bitterness and disorder, provoked little resistance or revolt except in a very few cases where regional patriotism sought tenaciously to cleave to its own soil. An all-India empire was a mighty dream and it can only be the faint-hearted who will fling criticism at Akbar for this. The establishment of an empire undoubtedly requires diplomacy as well as statesmanship of a high

order, but, as we have emphasised above, Akbar the man was far greater than Akbar the diplomat or Akbar the statesman. For, no other ruler of men in history could even have imagined the activities of an *Ibadat-khana* in which were held the philosophical conferences under Akbar's own direction. Some critics have characterised Akbar's *Din-i-Ilahi* as an attempt at his own deification; but an impartial study of the history of the age will convince all that Akbar never sought to deify himself. The utmost that can be said was that the great emperor was aiming at the establishment of a unified and cosmopolitan theocracy in India with a benevolent monarch at its head, and there was nothing improper or unjust in it. For, theocracy has been the character of all States in the East, even from the days of Egypt and Assyria. It was the Hindu ideal, and it was the ideal of Islam too. All that Akbar sought to do was to modernise it and bring it into line with the political ideals of the sixteenth century, and the special needs of a country like India—a land of many creeds and many peoples as she then was.

But the greatness of Akbar lay in this that he did not believe in bringing about a seeming homogeneity by the application of external pressure; he wanted to change the very hearts of the people, fire them with a wide national idealism and provide them with a new politico-social outlook, a new framework of corporate self-expression. This was the earnest effort of a sincere soul to realise the integral unity of national thought

and culture. But alas! the task was too great and complex for even an emperor, however gifted and inspired he might be. A spiritual genius of the highest order was needed, a perfect combination of the unclouded vision of knowledge and the infallibly effective power of knowledge to actualise this colossal dream of a united India—united in faith and culture, in aspiration and achievement, in all the teeming diversity of a richly flowering national life.

IV

Yet in appraising the work of Akbar the historian must acknowledge that in all that he did for the political advancement of India he was guided by a vision of her oneness and integrity. But this vision opens into a greater truth, a deeper meaning, a higher purpose. It is not for nothing that the seers and sages of ancient India worshipped this holy land as the Mother—the Mother who holds in her bosom infinite bounties not only for the physical nourishment of man but also for his spiritual sustenance and growth. Even what she externally is was regarded by them as a conscious formation of the Mahashakti, the supreme Mother, who will manifest here and liberate humanity and lead it to its divine goal. 'One India' is not a mere glowing dream, wrought out of the fire and fantasy of a perfervid patriotism. It is a pre-ordained fact, a spiritual reality waiting for materialisation when the children of this country, transcending the

bounds of their caste, creed or race, will awaken to a deeper and larger vision of the Mother and discover in it their oneness. The cultural unity necessary for such a consummation has always been there as an unfailing foundation. Attempts have been made through the ages both by Hindu and Muslim emperors from Chandragupta Maurya to Akbar to build on it the structure of a strong political unit; but the structure took its definite form under the British rule—a device of Nature to bring about that eventuality after so many previous means had been found wanting. The political unity of India is a requisite condition for that real and permanent unity which it is the destiny of India to achieve. And the time for that is approaching, despite the reactionary forces that stand in her way. For, the Shakti of India must fulfil her Will. And no power on earth can stop that.

What Akbar foresaw and began is being progressively developed and perfected by a complexus of politico-cultural forces of prodigious magnitude. Akbar's was the greatness of the vision, the largeness and nobility of the conception, the intrepidity of the first decisive formation. The kingliest of political dreamers, the mightiest of political architects, the most humane of legislators and administrators, Akbar stands unique in history. Neither Alexander nor Caesar, nor Napoleon was endowed with such an amplitude and depth of humanity combined with such a quiet strength and far-seeing constructive genius. Akbar was no power-hunter, no fanatic of a

religious or political idea, no reckless gambler in the fortunes of a nation. Chandragupta, Ashoka and Akbar—these are the three great names that shine out with a striking lustre from the galaxy of Indian monarchs. The first two were the pure product of ancient Hindu culture and the last, a fine flower of that Indo-Saracenic fusion which bids fair to play an important part in the creative life of the united India of tomorrow. It is time we tried to reassess the greatness of this royal unifier of our motherland.

CHAPTER IV

The Vision of Ajanta

I

A LITTLE over three centuries before the Christian era, when Buddhism was beginning to give a fresh impetus to the creative genius of India, a certain king—most probably Ashoka to whom the highest of all virtues was to proclaim the message of Lord Buddha—took upon himself the sacred task of helping a group of Buddhist monks to undertake the excavation of a series of cave-temples in that part of the mountain-chains known as the Western Ghats, which marks the boundary of the Deccan table-land and distinguishes it from that of Khandesh, along the valley of the river Tapti. The valley, just where it tends to a convex crowned with a number of cliffs, offers a peculiar position and was chosen by the ancient monks for cutting out those caves and carving and decorating them with the most beautiful composition of plastic and graphic arts. Begun about the third century B.C., the excavations had continued

under the patronage of kings and nobles for a period of about one thousand years, with occasional breaks at times, till the close of the seventh century of the present era when the latest of the caves were finished. The caves, twenty-nine in number, are rich with the most wonderful art-relics of India that have survived the ravages of time, escaping somehow the vandalism of religious iconoclasts.

An outstanding feature of Ajanta art is that it combines, in its variety of expression, the three vivid art-forms that were so wonderfully, and at the same time so usefully, cultivated in ancient India for the elevation of the human soul in its eternal quest of Truth. Indeed the cutting out of the rugged mountain cliffs into beautiful *Chaityas* (cathedrals) and *Viharas* (monasteries), some of which are considered as "the most perfect specimens of Buddhistic art of India" and are admired for their beauty and completeness of architectonic details, required the most consummate knowledge of constructional science; the carving in them of rhythmic figures of Buddhas and Bodhisattvas, and of various other gods and goddesses, all immensely suggestive of the deepest spiritual moods, expressing religious conceptions and carrying intimations of divinity—the two prominent characteristics of Indian sculpture—necessitated a perfect employment of sculptural technique; and the decorating of these caves by paintings frescoed on their walls and ceilings treating of religious and secular subjects in mystic touches of lines harmonised with

certain simple colours, would never have been possible without a complete mastery of the brush. Although each of these art-forms is by itself a typical example of the best creation of Indian art, what gives Ajanta its character as a centre of art culture is the splendid blending of those art-forms into a unity of artistic conception, the spirit of which pervades the whole atmosphere of the shrines and strikes even the most uninstructed visitor with a wondering admiration.

The selection of the site is peculiar in more ways than one. The situation is romantic, like that of the majority of the Buddhist shrines in India. For, an artistic appreciation of natural scenery is particularly noticeable in Buddhist paintings, more prominently in the Ajanta ones: and that the monks as a body were alive to the inspiring influence of beautiful surroundings is evident in their invariable selection of picturesque sites. Nature appears to have most lavishly poured out the wealth of her soul in robing the environs of Ajanta in poetry and beauty. Leaving aside the fact of its being on a series of mountains (which is ascribed to the belief cherished by the monks that greater the exertion needed for excavating the caves, the greater the merit), we have to consider the no less important question as to why they choose this isolated hill-cleft which is difficult of access, and, being confronted with massive slopes of rocky scrap opposite, is shut out from a direct view of the open country below.

The oldest of the caves, CAVE IX, appears to have

been excavated in about 300 B.C. when the earlier phase of Buddhism known as the Hinayana school was the dominating creed in Buddhistic theology; and the monks who were directly or indirectly connected with the excavation must have been strict observers of the rigid discipline enunciated by the exponents of that particular school. As such, they felt inclined to select this inaccessible spot excluded from even a view of the world outside, so as to be able to carry on their spiritual practices unhampered by any distractions of mundane life. But the figures of the Buddhist gods and goddesses in the caves done in the sixth and seventh centuries—the most glorious period of Ajanta art—show the influence of the Mahayana school which was then a popular cult in various parts of northern India. The artists of these shrines were no doubt Buddhist monks but they were imbued with the new creative spirit of the age which gave India her classical expression.

By its insistence on freedom and universal brotherhood Buddhism liberated the social life of the country from many of its cramping evils. The disciplines of Yoga and Bhakti, adapted to the Mahayana Path from Hinduism, opened up new channels of spiritual activity among the Buddhists. And they started to worship their Lord and his previous incarnations through beautiful figures which they themselves created out of the fervour and intensity of their heart's devotion. By Yoga they were led into those illuminations in the depth of their soul in which they

discovered the oneness of the physical and the supra-physical. The outer is indeed the vesture of the inner. The body is verily the temple of the Spirit, it is even an image of the Divine and it never ceases to be so whatever the condition in which it may find itself. To reveal this truth is the highest function of art. The art of Ajanta fulfilled this function by its opulent representation of the manifold phases of life against the background of their essential unity.

Another event that contributed to the growth of the creative spirit of the age was the revival of Hindu culture under the Guptas during whose time Ajanta had already produced many of its best works. The Gupta emperors showed Vaishnavite inclinations and extended the utmost possible patronage to the monk-artists of Ajanta, among whom there were Hindus who worked on Buddhist subjects, and Buddhists who worked on Hindu subjects. But almost always the artists were spiritual seekers or monks. They are, therefore, remarkable instances of the religious fellowship of the age in which Buddhism began to be absorbed by Hinduism.

II

The pragmatic mind of today finds it difficult to reconcile this cultivation of art by monks with the austere life of discipline they were required to live in that centre of spiritual culture. The fact is that apart from the favourable conditions that the social

and religious outlook of the time provided for the renewal of India's artistic genius, there is indeed a yoga in art too, and by practising it in the right spirit the artist-seeker grows in his spiritual stature. That is why the artists in ancient India were called *shilpi-yogins*. Not only that, in a *Shilpa-shastra*, the artist is strictly enjoined to undergo a course of ceremonial purification and perform in a solitary place the "sevenfold office" beginning with the invocation of the hosts of Buddhas and Bodhisattvas, and the offering to them of real and imaginary flowers. Shukracharya, a celebrated aesthetist of the period, says: "The artist should attain to the images of the gods by means of spiritual contemplation only. The spiritual vision is the best and truest standard for him. He should depend upon it, and not at all upon the visible objects perceived by the senses."

It is, therefore, quite possible that the monks took to art not for any personal pleasure or, as has been commonly supposed, for any express purpose of educating the pilgrims, but primarily for the sake of their own sadhana, as a course of art, they thought, would help them in attaining to higher stages of spiritual unfoldment. Theirs was 'not art for art's sake, but art for the Divine's sake.' Had it been their concern that those beautiful works of their art should please their own tastes or instruct pilgrims visiting the caves, they would have chosen a less inaccessible site and carved or painted the figures of gods and goddesses only. But what did they do

instead? They gave free vent to their aesthetic impulses and translated them into the rhythmic forms of their craft. Their daring romanticism in depicting various scenes of the royal courts, processional demonstrations, racial types, and so many other secular incidents of life, all throbbing with vitality and action, is indeed remarkable if we judge the merit of their art not by its exterior motifs but by the light of the inspiration which created and developed them. Their choice of secular subjects may be attributed to the desire of the monk-artists to sublimate their vision of life into the intensity of symbolic spiritual expression so that divested of its earthly grossness, life might appear resplendent in the native glory of the Spirit.

The origin of Ajanta art should, therefore, be traced not merely to what it outwardly is, but more surely to the vision of the seeker-artists, and to the way they tried to render that vision articulate on the walls and screens of those holy cave-cathedrals which still bear eloquent testimony to their ardent striving to discover for man the eternal verities of life. The soul in the artist, awakened to a consciousness of its own power of self-expression, found its vehicle in the simplicities of line and colour, in the rhythms of plastic figurations, and broke out in the immensity of its overflowing joy to reveal its vision of the all-pervading beauty and harmony that underlie the varied manifestations of life. The art of Ajanta unfolds the secret of the unity of all existence.

The archaeologist has racked his brains to trace in the motifs and technique of Ajanta art influences of foreign countries such as Persia and Greece (this myth has since been exploded), and the utmost he has said in appreciation is a few dry words in praise of the assimilative power of the artists. The historian has been at great pains to read into the inscriptions so far deciphered at Ajanta some meaning relating to facts or events bearing on the contemporary periods of ancient Indian history, the works of art there having struck him only as materials for studying the social and political life of the country and for describing that glorious heritage of India. The thinker has discovered there the true atmosphere and setting for 'a live university of creative culture' where, away from the distractions of the work-a-day world, the monks carried on their researches to solve the problem of spiritual science; he revisions with his mind's eye the surging waves of a new faith fertilising the mind of India with the potentiality of an inevitable renewal of her cultural destiny. But crowning all these different standpoints from which Ajanta has been viewed or studied are the passionate zeal and the worshipful spirit with which the artist full of the optimism of the archaeologist, the historian and thinker, has described his pilgrimage to these still-today-the-most-wonderful art-shrines of India. He has heard the music, read the poetry and felt upon his soul the subtle and sweet touches of the Unseen Beauty which gleams through these superb creations

of Indian art. The charm of Ajanta art lies not only in the perfection of its convention and perspective but also in the vital and vigorous spontaneity with which it has rendered into the universal language of art the pulse and passion of the artists' longing for communion with the Soul of Eternal Life. The unsophisticated artist or art-critic visiting Ajanta will, doubtless, through his deep and sympathetic study of the cave-temples, be able to fathom the spiritual vision that was the well-spring of the living art of Ajanta, to enjoy the dulcet harmonies of this musical choir beating to the measure of the music of the spheres.

"All Indian art", says Sri Aurobindo, "is a throwing out of a certain profound self-vision formed by a going within to find out the secret significance of form and appearance, a discovery of the subject in one's deeper self, the giving of soul form to that vision and a remoulding of the material and natural shape to express the psychic truth of it with the greatest possible purity and power of outline and the greatest possible concentrated rhythmic unity of significance in all the parts of an indivisible artistic whole." This is yoga in art, a creative union of the being of the artist with the self-manifesting Spirit of the universe, and its practice in ancient India flowered forth into those wonderful works which characteristically fulfil the spiritual and, therefore, the real intention of Indian culture. The mural paintings of Ajanta are among the best of them. The

only surviving as also the most beautiful examples of the pictorial art of ancient India, these frescoes are in every respect true to and typical of the artistic genius of the race. Their peculiar appeal springs from a remarkably spiritual and psychic aroma and atmosphere which were imparted to the artistic conception and method by the contemplative turn of the Indian mind. The beauty and power of the idea, the subtlety and flexibility of the line, the vibrant depth and richness of the tone, and the dreamy inflexions of the music of this painting, are too obvious and enchanting to be denied: the psychical appeal usually carries something in it to which there is a ready response in every cultivated and sensitive human being. The whole creative force comes here from an inner vision of the artist, a deeper intuition of his soul. To him the outer is but a garment of the inner. And if he makes the garment glow and glitter, it is only to convey a bare hint, shoot a single ray of the infinite effulgence within, which is the glory of his vision. An impeccable sense of symmetry and unity guides him in the manipulation of his artistic expression, and even when he lavishes in unstinted profusion, he invariably ends by creating not the grotesque exuberance of an extravagance but a veritable dance of the stars. A high discerning austerity in technique, *tapas*, saves him from introducing into his conception and execution anything that is likely to detract from the unity and harmony of his creation. He begins deep within, sees the soul of the thing

he is inspired to express or interpret in his own soul, catches the native form and rhythm and colour of that soul and lets them reveal themselves through the medium of his trained and plastic technique. The expression is not, therefore, a replica or a faithful reproduction of the line, colour and design of the physical nature, but much rather what would seem to us, if we had an inner perception, a psychical transmutation of the natural figure. In reality, the shapes he paints are the forms of things as he has seen them in the psychical and other planes of experience. "They are the soul figure of which physical things are a gross representation and their purity and subtlety reveal at once what the physical masks by the thickenss of its casings. The lines and colours sought here are the psychic lines and the psychic hues proper to the vision which the artist has gone into himself to discover."

III

The famous group of the mother and child before the Buddha, frescoed on a beautifully designed panel in CAVE XVII, is a remarkable example of the highest that Ajanta achieved in painting. Here is a revealing study of it by Sri Aurobindo. He says: "If we look long at the adoration group of the mother and child before the Buddha, one of the most profound, tender and noble of the Ajanta masterpieces, we shall find that the impression of intense religious feeling of adoration there is only the most outward general touch

in the ensemble of the emotion. That which it deepens to is the turning of the soul of humanity in love to the benignant and calm Ineffable which has made itself sensible and human to us in the universal compassion of the Buddha, and the motive of the soul moment the painting interprets is the dedication of the awakening mind of the child, the coming younger humanity, to that in which already the soul of the mother has learned to find and fix its spiritual joy. The eyes, brows, lips, face, poise of the head of the woman are filled with this spiritual emotion which is a continued memory and possession of the psychical release, the steady settled calm of the heart's experience filled with an ineffable tenderness, the familiar depths which are yet moved with the wonder and always farther appeal of something that is infinite, the body and other limbs are grave masses of this emotion and in their poise a basic embodiment of it, while the hands prolong it in the dedicative putting forward of her child to meet the Eternal. This contact of the human and Eternal is repeated in the smaller figure with a subtly and strongly indicated variation, the glad and childlike smile of awakening which promises but not yet possesses the depths that are to come, the hands disposed to receive and keep, the body in its looser curves and waves harmonising with that significance. The two have forgotten themselves and seem almost to forget or confound each other in that which they adore and contemplate, and yet the dedicating hands unite mother and child in the common act and feeling by their

simultaneous gesture of material possession and spiritual giving. The two figures have at each point the same rhythm, but with a significant difference. The simplicity in the greatness and power, the fullness of expression gained by reserve and suppression and concentration which we find here is the perfect method of the classical art of India. And by this perfection Buddhist art became not merely an illustration of the religion and an expression of its thought and its religious feeling, history and legend, but a revealing interpretation of the spiritual sense of Buddhism and its profounder meaning to the soul of India."

The secular paintings of Ajanta have also their soul meanings. They represent the manifold expressions of life. But the acme of artistic excellence is reached in those among them that appeal not so much for their force and vividness as for their suggestions of the Spirit's adventure in Life. The artist pours out his whole soul in colour, he articulates in line a beauty that is not of this earth, a grace that is supernatural, and all this to such a high degree that even pictures of ordinary human activity become a mystic revelation of the life of the soul.¹

The sculpture of India also springs from a spiritual realisation, and what it creates and expresses at its greatest is the spirit in form, the soul in body, this or that living soul power in the divine or human. His immobile medium does not of course give to the sculptor that liquidity and fluency which colour and line

¹ Examples studied in Section III of Chapter I.

give to the painter. Nevertheless he is equally able to embody in stone a soul state or experience or any deeper soul quality. A typical example of this is the figure of the Buddha,¹ evolved during this age. We have in Ajanta this figure as well as those of the Bodhisattvas, all done in the characteristic style of the plastic art of India. The sculptured group by the entrance of the most splendid of the Chaitya halls in CAVE IX is one of the best creations of Ajanta sculpture. A Nagaraja is seated with his queen who holds in her hand a lotus and on her head the crown of a coiled cobra. Both of them, the Nagaraja more visibly, are in a mood of contemplation, almost a state of trance, into which they have been plunged by the invocations chanted by the monks in that Chaitya hall, a fact which shows the artist's sense of harmony between his subject and his surroundings. An atmosphere of other-worldliness pervades the whole group even in its minutest details. The sitting posture, particularly the loose setting of the legs of the king as also of the queen indicate their deep absorption in what they are hearing,—an absorption that has made them forget to compose their legs. Thus does the group combine naturalness with soul suggestion.

Ajanta is no less famous for its architectural excellence. Indeed it represents the perfection of form to which cave architecture attained in India. The exquisite façade of CAVE XIX is evidence enough of the fact that the Ajanta artists were no less great in their

¹ Studied in Section III of Chapter I.

mastery of constructional science than in the arts of painting and sculpture. This façade is undoubtedly an improvement on the Nasik type. The Chaitya-window stands over the double-corniced flat roof of the doorway supporting the roof by its four pillars. To the right and left of the façade and on the wall of the excavated court in front of the Cave are carved in bold relief many figures of the Buddha. Inside the Cave there are a number of aisle pillars which are richly ornamented fluted columns with pot and foliage capitals, and massive, decorated rounded brackets supporting an elaborate frieze of niches with Buddha figures. The innumerable figures of the Buddha suggest the exuberance of the artists' devotion, and their eagerness to show the omnipresence of that divine personality. The vastness of their vision of the Master can certainly not be circumscribed in a single figure. The whole atmosphere of the Cave—a marvellous combination of sculpture and architecture—is resonant with the raptures of worship expressed in syllables of silence through which the monks poured out the prayers of their soul. That art to them was a part of their sadhana goes without saying. Indeed what a strenuous labour they must have undergone for centuries to transform these rugged hills into beautiful temples! Nowhere in Ajanta do we find the names of those who created these wonders, which affords another proof of their self-effacement in their endeavour to give artistic interpretation to the psychic and the spiritual.

IV

The history of Indian art, so far as its graphic elaboration in colour and line is concerned, is in the most part an attempt to study the psychology and expansion of a distinctly peculiar tradition that grew and developed at Ajanta in that creative epoch of Indian history. Indeed Ajanta offers the most living and powerful of art-traditions of ancient India. Yet while it tends to assert its distinctiveness, it had the special quality of being absorbed in the technical execution of the works of any contemporary or subsequent school of painting which it inspired or influenced; and where regional characteristics have not been so dominant, Ajanta tradition, instead of outshining whatever there remained of local peculiarities, has helped to evolve newer forms possible within the environs of their growth.

The frescoes at Sigiriya in Ceylon, executed during the reign of Kashyapa I in the last quarter of the fifth century A.D. bear striking resemblance to some scenes of CAVES XVI and XVII of Ajanta. Though the subjects of the paintings as a whole do not breathe the spiritual fervour and show the extraordinary technical standard of Ajanta, yet they are regarded as typical examples of the Buddhist school of painting at Ceylon in which is unmistakable the influence of the tradition that was built round the marvels at Ajanta. Next in order but contemporaneous with Ajanta are the paintings of the friezes in a series of

caves excavated at Bagh in Gwalior State, about a hundred and fifty miles from Ajanta. In craftsmanship they are closely similar to those at Ajanta, and maintain the same solemn poses, differing only in the themes executed, which, however, are all of them human. They depict scenes from the social life of the times, yet even the most casual observer will not miss in them the sweetness and grace of Ajanta frescoes. The discovery, in 1920, of fresco paintings in a temple at Sittannavasal in the ancient Pallava country in the Madras Presidency, attributed to Mahendravarman I in the first quarter of the seventh century, records a distinct continuation of Ajanta technique. In the opinion of Cousins, there are obvious in the Sittannavasal frescoes the same high mood of solemn serenity, the same rhythmical graciousness, as are discernible in the frescoes at Ajanta.

The importance of Ajanta tradition is to be judged not merely from the standpoint of its local and contemporary influence. There is another and more convincing proof of its power and influence in that even after the lapse of as many as eight centuries since the latest of the Ajanta caves was excavated, it is found to stimulate the growth of newer styles, however primitive. Witness the miniature paintings of the Rajput and Pahari schools which flourished, the former in Rajputana, and the latter in the Punjab and the foot-hills of the Himalayas. And its original vigour had not a little to do with the growth of the

neo-Indian school of painting in modern India.

So far in the realm of its birth. In the art relics of Central Asia, China, Japan, Java and Cambodia—those distant outposts of Indian culture—unmistakable proofs are found of the far-reaching influence of the art of Ajanta. Inspiration from Ajanta can be traced in the Buddhist grottos, sculptures and paintings discovered in Bamiyan, Bactria, Khotan, Miran, Kuchar, Turfan and Tun-huang. The influence of Ajanta's cave architecture is particularly distinct in the grottos in the hills surrounding the valley of Bamiyan. Many of the frescoes in them, too, owe their origin to Ajanta. The fresco representation of the *kinmaras* swimming in the sky is clearly Ajantan. Ajanta's contribution to the making of Indonesian art cannot be overestimated. It was Ajanta which gave to China the idea of excavating caves and of decorating them, as are best exemplified by the well-known sculptured caves of Yun Kang near Ta-Tang-fu, excavated under the patronage of the Northern Wei dynasty at the close of the fourth century A.D. Japan shows strong traces of Ajanta influence in the painting of the Nara period in the seventh century A.D. Edward Dillon in his book called *The Art of Japan* says that some famous ancient paintings of Japan owe much to the technique of Ajanta frescoes. The recent discovery of Ajanta influence in the work of a Japanese artist who presents Shiva and Parvati in Japanese style deserves mention. Again, in connection with the famous fresco in the temple of Horiyuji,

presumed to date from the first part of the eighth century, Lawrence Binyon states that "this is quite Indian in character, recalling the frescoes of the cave-temples of Ajanta, in its grand strongly outlined figures and in the feeling for character and life which it reveals. There seems no doubt that it is modelled upon the Ajanta frescoes, and the fact is an eloquent and significant testimony to the freedom of intercourse then existing between India and Japan." German authorities like Stutterheim and Juynboll are of opinion that the style of the figure of a woman with a child drawn on a central Javanese engraved copper-plate is essentially Ajantan. Fergusson held that the builders of the world-famous Boro-Budur monument in Java migrated from Western India. According to him, "the character of the sculpture and the details of the ornamentation in caves at Ajanta, Nasik and other places are so nearly identical with what is found in the Javan monument, that the identity of the workmanship is unmistakable". The French orientalist Goslier opines that the Buddha figures from Romlok, Ta Teo, in Cambodia, are closely related to the rock-cut Buddhas in the precincts of CAVE XIX of Ajanta.

Further study and closer examination will reveal newer truths about the expansion of the distinctive characteristics that grew up and developed in the art of these peculiarly-cut cave-cathedrals of ancient India. This celebrated epic of Indian art has attracted art connoisseurs from distant parts of the world, who

have recorded in inspired language their rapturous appreciation of the unparalleled merit of the art-forms inclosed in it. Sister Nivedita saw in these caves magnificent temples that are still vibrant with the fervour of devotion with which the monk-artists worshipped the Lord of their heart. Christiana J. Herringham, a reputed English paintress, who came all the way from England to study the paintings of Ajanta, called them amazing and unique in the history of art. The delicate curves on the surface of a ceiling of one of the caves appeared to John Griffiths "to be nothing less than miraculous". A Danish artist, who has published a valuable professional criticism on Ajanta, declares that the paintings there represent the climax to which genuine Indian art has ever attained; and that everything in them, from the composition as a whole to the smallest pearl or flower, testifies to the depth of insight coupled with the greatest technical skill. E. B. Havell, the foremost of all foreign admirers of Indian art, asserts that these paintings constitute India's claim to the respect and gratitude of humanity.

What is that in Ajanta which has won for it this praise from the whole world? Why does it make such a universal appeal? and how in the past could it influence the art of almost the whole of Asia? Apart from the magic and charm of its beauty, its classical excellence, which without doubt strengthen its hold on the aesthetic sense of mankind compelling its spontaneous homage, there is in that appeal a

deeper force, a diviner power, which touch the very soul of man and awaken it to an inner truth than what the works outwardly suggest. A light from above dawned on the vision of the artists. It was the light of the world of eternal beauty and bliss, whose glimpses the artists had; and having created out of the very centre of that vision, they were able to enliven their work with some ray of that infinite Splendour, some portion of that immortal Ananda. It is this in Ajanta that endows it with the supreme virtue of captivating the soul of man, opening to his intuition the greatness and grandeur of that perfect world into which the present is destined to be reborn. The discerning spectator perceives in Ajanta this supernal glory and breaks into words that shoot straight from the inmost core of his heart.

The monk-artists in their moments of inspiration rose far above the boundaries of their theology and saw and created in the vastness of the realms that are eternally immune from the invasion of mind-made distinctions. Consecrated in thought and feeling to the Most High, contemplative and self-controlled, these Fra Angelicos of Ajanta have woven in the dim solitude of their rocky retreat such mystic marvels of beauty and sublimity that mirror the profundities of the abiding truth of existence and point to a brighter future not only for the art of India but also for the race that has produced them.

CHAPTER V

Towards A New World

I

AGAIN and again in his history man has found himself forced into a condition of war by circumstances over which it would seem he has no control. When he was not the aggressor he had at least to be the defender of his rights and of his *lebensraum* against the encroachment by a powerful invader. Anyway, violent hostilities have come to be a recurrent phase in the community-life of man. There can be no gainsaying the fact that war is an evil, but it has not been in the past an unmixed evil. If to the path of peace man owes much of his progress, not a little of it he owes to the path of war, notwithstanding all the miseries it has brought upon him. From a longer view of its ultimate effects war would appear to have been a useful factor in the growth and expansion of human collectivities. But why war at all? "Wherefore God hammers so fiercely at His world, tramples and kneads it like dough, casts it

so often into the blood-bath and the red hell-heat of the furnace? Because humanity in the mass is still a hard, crude and vile ore which will not otherwise be smelted and shaped; as is his material, so is his method. Let it help to transmute itself into nobler and purer metal, His way with it will be gentler and sweeter, much loftier and fairer its uses."

Indeed evolutionary Nature cannot stop in her upward movement; she must go on fulfilling herself in and through the cosmic process, regardless of the nature of the means she employs for the achievement of her supreme aim. Yet is conflict not always her favourite method. Human history is not throughout a black record of wars and hostilities. It has had its periods of light when the world has been illumined by the advent of saints, seers and prophets who, by their life and teachings, have proclaimed to man that in peace alone lies the true foundation of life and that it can thrive only on Truth, Love, Freedom and Unity which are the very nature of his soul 'in which Peace hath its eternal abode.' They have, indeed, emphasised in unmistakable terms that for his growth towards the Light, towards the higher destiny of which he is capable in his terrestrial evolution, man must live in his soul and realise these ideals in his life. This is Nature's way of balance and harmony.

It is not that these teachings have always been entirely slow and uncertain in working their way into the heart and soul of man. Some of them have produced in his inner life more revolutionary changes

than have actually been caused in his outer life by any violent conflict of the battle-field. But they are of a different character, and have always helped forward the spiritual progress of man by intensifying his Godward endeavours, his soul's aspiration for a greater fulfilment that would take him to the goal for which he, or rather Nature in him, is always striving.

There is no doubt that man, especially so far as his spiritual evolution is concerned, has been immensely enriched and exalted by the truths revealed to him by those true uplifters of the race. But the fact also cannot be overlooked that his progress and civilisation have been not inconsiderably accelerated by the clashes that have taken place in his collective life as a part of Nature's plan, made inevitable by the stress of those forces which dominate man when he gravitates exclusively towards vital satisfactions, when he panders to his individual and collective egoism, and forgetting his high destiny, ceases to make any serious effort to actualise in his life the ideals held aloft by the great masters. This is a state in the affairs of man which tends to dry up all springs of real progress and threatens to imprison the soul, rendering all spiritual endeavour difficult. The death of many civilisations in the past has been more or less due to such retrograde movements of the collective being to which they belonged. War, therefore, is in the nature of a battery charge or a sharp galvanic shock.

History from its very dawn testifies that even a long and unhampered period of peace has very rarely proved a guarantee of continued cultural advancement. Often enough it has been found to beget such ease-loving, and therefore, demoralising tendencies as always destroy in the nation or the people all its grit, vigour and initiative so much so that it soon shows signs of decadence which precludes any new going forth, any fresh adventure. What has happened in many instances to serve as a way out of such moribund state is an incursion or onslaught from outside by barbarians or by a stronger power whose impact has infused a new energy into the people; or that a far-sighted statesman or a heroic builder has risen in it, and by his power, sometimes derived from a higher source, quickened into activity the whole people, holding before it a glowing ideal and inspiring it to live and die for that ideal, with the result that the people has been reborn into virility and greatness. But this again has led to an excessive self-glorification resulting in conflicts with others who happened to stand in the way of its political or regional expansion. Lust for world-empire has been no less a cause of such conflicts.

Thus it seems that war is a phenomenon which has been unavoidable in the order of things in which man has so far found himself. Human groups and collectivities have in most cases been formed and organised through clashes and collisions in the earlier stages of man's social development bringing home to him the

necessity of strengthening his community-life, so that when necessary—and there has never been any dearth of pleas for that—it might extend the sphere of its existence or defend it against attacks from outside. But what is more is that, apart from the various constructive movements and institutions which conflicts between nations or peoples throughout history have been found to have brought into being, they have served a yet greater purpose—that of giving an amazing impetus to the creative faculties of the peoples involved, stirring them into a new life, into new ideas, into new channels of self-expression by which they produced what turned out to be so many steps forward in the general progress of mankind. The English historian utters a great truth when he says that civilisation advances by powder-carts. A yet profounder truth is suggested in the saying of Heraclitus, "War is the father of all things; War is the king of all."

There is another reason why Nature adopts this drastic method when she finds peaceful means not fully effective. It is that she is against the old order of things to continue for a long time and that she abhors unnecessary delay in the completion of her work in the terrestrial evolution. She is here the Mahakali, "the Warrior of the Worlds who never shrinks from battle, who has in her an overwhelming intensity, a mighty passion of force to achieve, a divine violence rushing to shatter every limit and obstacle. All her divinity leaps out in a splendour of tempest-

tuous action; she is there for swiftness, for the immediately effective process, the rapid and direct stroke, the frontal assault that carries everything before it."

II

It seems that some kind of strife is at the root of everything by which Nature keeps up her progressive movement towards her evolutionary goal. The world itself, it may be said, is born out of the clash of material and other forces, and it proceeds by perpetual struggle against those that oppose its onward march, ever creating new things, ever destroying the old, and leading through whatever trouble and apparent confusion towards an approximation to some divine revelation. Whatever that may be, "this is certain that there is not only no construction here without destruction, no harmony except by a poise of contending forces, won out of many actual and potential discords, but also no continued existence of life except by a constant self-feeding and devouring of other life. Our very bodily life is a constant dying and being reborn, the body itself a beleaguered city attacked by assailing, protected by defending forces whose business is to devour each other: and this is only a type of all our existence. The command seems to have gone out from the beginning, 'Thou shalt not conquer except by battle with thy fellows and thy surroundings; thou shalt not even live except by battle and struggle and by absorbing into thyself other life. The first law of

this world that I have made is creation and preservation by destruction'."

War and destruction, it would seem, are a universal principle of our life. They also appear to be unavoidable. Their necessity in the plan of Nature is indicated by the fact that, since evolution is a kind of rebirth of the old into newer and better forms, the old must go; and when, as often, it does not, but rather clings and persists, Nature is forced to use her deadly weapon of war to destroy the old and the effete, so that the new may come into being and grow in freshness and vigour. In this way the cycle goes on, war helping to keep up this continuous flux of things towards greater and unrealised possibilities.

In every field of human activity no movement has ever made any progress without a struggle, a battle between what exists and lives and what seeks to exist and live. "It is impossible, at least as men and things are, to advance, to grow, to fulfil and still to observe really and utterly that principle of harmlessness which is yet placed before us as the highest and best law of conduct."

The power of the soul can of course obviate any such external clashes. But it cannot be so easily evoked, and when its effective use is possible, it is found to be more terrible and destructive in its results than the sword and the cannon. The triumph through the soul-force of Vashishtha over the military power of Vishwamitra is an appropriate instance. Anyway, infliction of violence on others, whatever might be

the means of the provocation, cannot be stayed by any external method. To abstain from violence simply because it involves killing is to deny the very law by which humanity is at present guided. The debt of Rudra must be paid, the Lord of destruction must be appeased so long as the Asuric force in men and nations, that enemy of the Divine, is not completely annihilated. The promised Dharmarajya, the Kingdom of Righteousness, of which God will be the sole ruler, can be founded on earth only when it is freed from the influence of the demon.

But the deeper root of all conflicts in his inner and outer life, into which man finds himself dragged by an inscrutable fate lies in the very nature of the terrestrial existence whose inward meaning remains hidden so long as an approach is not made to it in consonance with the secret aim of Nature in the evolutionary unfolding of the earth consciousness. That aim is the progressive emergence in man of Sachchidananda who is involved in the ignorance, inertia and division of the inconscient material substance. Nature chooses man as a special field of her work, because he has arrived at a stage in his evolution at which he must be made ready for the next higher one through the victory of the spirit in him over his lower nature, for which the conditions in the earth are becoming more and more favourable. There is in man an ascending urge which is rekindled by Nature into a flaming aspiration towards the Light whose instrument he is destined to be in order to take part

in its manifestation on earth. Man, as he grows in his aspiration, grows also in his spirit and in his readiness for that consummation.

Man will have, therefore, to discover in him his psychic being, that entity of his soul in his life, mind and body, which derives its evolutionary motivation from the supreme Shakti who, in one of her aspects, is the evolutionary Force herself. It is his psychic being that seeks through the cycle of births to fulfil itself in the process of evolution. Man must open to the supreme Shakti and be plastic enough for her Light to come and descend into him and purge him of all his turbidities and mould him into an expression of the Divine. But being at present conditioned by Ignorance and by all that it has erected in its dark region for the maintenance of its domination over him, man, when he hears the call of the Mother and takes the decision to respond to it, finds himself confronted by formidable odds presented by the evils which he has allowed to rule his present existence. These evils try with all their might to keep him under their subjection and frustrate his endeavour to turn towards the Light and to find there his perfection. Yet they have their value in the scheme of things, since they give man an opportunity to fight and thereby gather the experience and evolve the strength by which he can win his ultimate victory and possess its fruits and assimilate them, to the enrichment of his whole being.

Struggle, therefore, is a necessity and its importance

in any spiritual effort, no less than in any secular, cannot be ignored. Though, in fact, it is not the human individual, but the supreme Shakti herself who has always done and is always doing every bit of upward climbing for her creatures, yet nothing proves wholly effective in the process of evolution unless and until a conscious co-operation is given to her in the spirit of a complete surrender to her Will, so that she may perfect the instrument and divinise it. This is how Nature goes on fulfilling the purpose of the Mother both in the individual and in the collectivity. And when there is opposition from the earth due to its unwillingness to change, Nature renews her effort with greater vehemence, hastening thereby the revelation to man of the luminous world of the heavenly Light. Man grows nearer to this Light as his seeking after it becomes more and more intense. And the urge to renew this quest comes to him so often from the conflicts, whether inner or outer, which are like the friction in the Vedic image of two pieces of sacrificial wood, out of which eaps forth the flame, the flame of man's aspiration towards the Light. The flame represents the Divine's Will in man, the Will of the Mother-Power, to uplift him to his highest spiritual perfection. The Sempiternal Fire from above leans down to embrace its own spark in man when it darts upward to find its fulfilment in its supreme Source. This is the Mother's way of reclaiming her lost children of the earth. This is how she prepares them for the peace and freedom of a divine existence.

Viewed from this standpoint, the phenomenon of war springs from no external cause, nor is it meant merely for the accomplishment of an external objective. The supreme Shakti wants it and will continue to want it so long as man does not obey her Law and accept her as the sole ruler of his life and become the willing field of her work in the terrestrial evolution. War has therefore a role, not insignificant, to play in the evolutionary plan of Nature.

Life has been characterised as a battle. And indeed a battle it is, as it was to the Vedic Seers who in a mystic image represented "the life of man as a thing of mixed truth and falsehood, a movement from mortality to immortality, from mixed light and darkness to the splendour of a divine truth whose home is above in the Infinite but which can be built up here in man's soul and life; a battle between the children of Light and the sons of Night, a getting of treasure, of the wealth, the booty given by the gods to the human warrior, and a journey and a sacrifice."

In every Godward endeavour, in every upward striving, man is assailed by hostile and undivine forces, the *Panis*, the coverers of light; and if and when he gives in, as he often does, he loses the battle for the time being. If, instead, he wakes up from his sleep in Ignorance, becomes conscious of his high destiny, responds to the call of the indwelling Mother—the only source of his strength—and gives a straight fight to the enemy in the name of the Mother, then alone will victory be his and all

the riches of a heavenly life.

War will for ever be banished from the earth not when man will realise not merely its futility, as he has already begun to do, and try by the power of his mind to make it impossible, but when he is able to conquer the foes—the Sons of Night—grown in him out of his baser instincts, which are responsible for all the conflicts in his community-life and have developed in his individual life all those obscurities that obstruct the birth in him of the consciousness of his infinite existence for which his present life in ignorance, as also many before it, has been in travail.

Nevertheless, war is an evil, a monstrous evil, and it must go. It has existed long enough having fulfilled the purpose of Nature in the making of what man and his world are today. Time has now come for man to outgrow the stage when war was a contributory factor in his own growth as well as in the growth and expansion of his civilisation and collective being. But it will not stop only by our wishing it. The mechanical way in which it was sought to be ended has failed and will always fail because, as we have said, war has its origin deep in the inner laws that guide the evolution of the cosmic system and direct the procession of humanity towards its divine goal.

The modern mind is so much obsessed with its achievements in the outer court of life, so much dominated by an exclusive inclination to be satisfied with mere externalities that it is incapable of looking beyond the surface-view of things, and is only too

prone to rely on the values of science and reason, the values of all extrinsic attempts to solve a problem which is fundamentally intrinsic and intrinsically fundamental. Science has provided man with enormous powers which are proving far beyond his present capacity properly to manipulate. And if man is not able to attain sufficient psychological development, he will either be crushed out of existence by the deadly weapons he has himself forged with the help of his science or revert to a stage of barbarism.

There are thinkers who believe that science may make war of the present type with shot and shell and mine and battleship and atom bomb an impossibility and yet develop or leave in their place other and simpler means which may bring back the type of ancient warfare. But that is no solution of the problem. The terrible horrors of war may lead human reason to make a long peace possible, based on common community interests and mutual well-being; but so long as the nature of man remains as it is, such peace will come to an end under the stress of human passions.

Biologically, war may cease to be a necessity. The fullness of life into which the modern world has developed may, if reason so wants, bring about an equilibrium in the material life of man; but that will not change his heart. So long, therefore, as war is not made psychologically impossible it will recur, and the utmost that the superficial efforts towards its elimination can do will be to shorten or lengthen the

interval between its recurrences according to the nature of the effort and the acceptance of its results by humanity. The fact is that what is within must be out. The hostilities that break out in the open field of man's collective life will cease for ever only when man attains a decisive victory in his inner individual world, over the forces of his lower nature. Disarmament will defeat its own purpose if man is not disarmed of his baser instincts. The explosion of a bomb does invariably have behind it the explosion of the passions that rage in man and burst forth when ignition is given to them by a conflict of ideals or clash of interests in the external sphere of human activity.

The pity of it is that every consideration of the problem has ignored the one thing that matters, the remoulding of the human nature. The first World War stimulated the mind of man to think out the problem, but not a single plan for the reconstruction of the world from which, it was hoped, war would be tabooed, pointed out, far less emphasised that the root of the evil lay deep in the very nature of man. It is exceedingly unfortunate that every scheme or plan so far put forward for bringing about a new order after the cessation of the second World War should consider only the political and economic aspects of the problem and never the spiritual aspect of it, thereby repeating the same mistake as before. Nay, it is no longer a mistake. It will prove to be a colossal blunder since the future of humanity depends so

much on how the problem is tackled, and how real and lasting is the solution arrived at. And why only the problem of reconstruction? All major problems, those of freedom and unity in particular, man has not as yet been able successfully to handle.

But what is deplorable is not so much his failure to find out a solution,—because that is difficult, if not impossible, with even the highest of his mental powers that he can possibly possess,—as his capacity to trace it to its proper origin. “All social and political endeavours turn always in a circle and lead nowhere; man’s life and nature remains always the same, always imperfect, and neither laws nor institutions nor education nor philosophy nor morality nor religious teachings have succeeded in producing the perfect man, far less a perfect humanity,—straighten the tail of a dog as you will, it has been said, it always resumes its natural curve of crookedness.” This is the beginning of a new approach to all problems of humanity. The march forward is certainly there in everything that man has so far achieved by the power of his mind. But our estimate of it must be revised in the light of what it has resulted in. No wonder that the brutal exhibition of savage instincts that we are witnessing before our eyes today should make us question the much-vaunted superiority of the modern civilisation whose sponsors are themselves bewildered by the destruction, that is taking place and that is threatened, of many of the higher values which have so long sustained man’s urge towards perfection.

III

Yet in the midst of the thick gloom that envelops the world today the gleams of a coming dawn are beginning to be visible. The higher mind of humanity, represented by a very few individuals, is opening to the truth that man as he is now is unequal to the task of saving himself from the disasters that are growing every day; he must therefore change in his consciousness to be able to get at the true truth of things and to rebuild on it his life and society.

This touches only the fringe of the solution. The greater truth has yet to come, or rather, is in the offing and has yet to enter the consciousness of humanity, at least, of its thinkers who are open to new truths. Nevertheless, the idea that a change must come in the outlook of man so that a better order of things may emerge, as well as the fact that man is feeling the shock of war to be too severe and is trying by all means to remove it from the face of the earth are evidences of the possibility that the days of war are numbered and that a new turning-point in the history of man is very likely to be reached indicating a greater future for him. But the difficulties in the way appear to be formidable. How can man by himself change into a higher consciousness with his present nature remaining imperfect? And how can he perfect his nature if he cannot liberate himself from his bondage to Ignorance, if he cannot emancipate his spirit from its sordid identification with life, mind

and body? The answer to these questions must come from within, and it will depend largely on the readiness of man to hear the call of the Divine and seek the guidance of the supreme Shakti.

IV

Exclusive pursuit of life satisfactions and an unexampled mastery in the world of matter have on the one hand given man enormous powers by which he has erected the vast structure of his civilisation, while on the other hand the same powers have enslaved him to the Asuric forces which are always on the alert to pander to his egoistic impulses that exhibit themselves in the glorification of man above everything else, above even his own spirit whose call he has heard in rare moments but has never had the strength to respond to, lest he should lose his credit as the creator of his world of dazzling wonders which proclaim his unique victories and lure him into the conviction that it is he and none else who is its sole builder. Thus is man tempted away from God and is encouraged to worship the Titan whose hold on him increases in proportion as he receives his help and thereby allows himself to be ruled by him. Not only life, but mind also has in the same way grown into an undivine power. So also has matter to a still greater extent. And all of them are being used by the dark Forces to strengthen their domination over humanity. Man duped by the glitter of the material

possessions that he has acquired with the help of these demoniac powers, has readily played into their hands and as their instrument gives them his co-operation so that more treasures may come to him and more pleasures, little knowing that along with them will inevitably come a grinding, a corroding slavery and a palsied poverty of the soul.

This is indeed a very dismal scene in the human drama. The sorrows of man seem to be at their worst in spite of his being the possessor of almost every kind of material prosperity. But he cannot remain for ever a victim of these Forces. There is a higher destiny for him, a greater perfection, and to realise that is the true purpose of his life. A child of Light, he has the power inherent in him, the power of the Shakti, by which to baffle and beat the sons of Night, and be the heroic conqueror. But he cannot by his own effort evoke that power in him. He must aspire for the Grace of the Divine Mother who alone can do that for him and lead him to his evolutionary destiny. Whatever the impediments, they have to be overcome, since it is the law of Nature that evolution must proceed, realising itself progressively till its ultimate goal is reached. It cannot stop short, neither can it take a wrong course.

The signs are clear that in his evolution man has arrived at a stage where he seems to have attained the highest point of his mental possibility. And the vast successes that he has achieved by his mental and vital powers are beginning to prove too heavy for him,

and their deadening weight is about to kill his soul. Man has also started to feel, however vaguely, that an exclusive reliance on the creations of his ego-ridden mind has, instead of helping him to solve his problems, rendered them more difficult. This feeling will possibly bring about his disillusionment and there will grow in him a seeking after the true truth of his life and the deeper significance of Nature's intention in it.

v

The time is propitious today; and the conditions in life and nature are not only favourable to, but are pressing for the emergence in the vision of man of that great truth and also of the 'sunlit Path' that will lead him to its realisation. This will be the dawn of a new life for man whose birth is signalled by the world-wide travail through which humanity is at present passing. Forces of darkness and evil are rampant everywhere. Falsehood reigns supreme. Death is abroad. All these show a condition of things which, according to the assertion of mystics and prophets, must precede the Manifestation and is even a sign of its approach. Wherein then is the secret? Where is the Light? The secret has begun to be revealed to those who have heard the Call. The Light has been seen. The strength has come. The darkness will pass away, and the Sun of Truth will burst into the magnificence of a heavenly glory on earth. A higher than mental life is in promise for man; and that is the only

way out of the evils which afflict humanity.

A new Light from above is descending upon the earth by which will be effected the desired change in the nature of man as also in his consciousness, a change that will take place as the next inevitable stage in the evolutionary process of Nature. It is the pressure of this Light that has driven the forces of evil to invade the earth in all their riotous orgies. But their fall is certain, because the Light is decreed to come down and manifest on the earth, lifting man beyond himself into a higher order of being. Man must, therefore, be ready for this transformation. He must turn inwards, live within and live in his spirit. He must aspire for the Grace of the Mother, the Divine Shakti, who herself guides and directs the evolutionary march of man and who only, and not any human tapasya, can liberate him from the clutches of the asuric powers and, by releasing the godlike elements in him so long veiled by Ignorance, mould him into an expression of the Divine.

The Leaders of the Way are here upon earth. Seers of the Supreme Truth, discoverers of the Light, they unfold before man the splendours of a new and higher life into which he is going to be born. Bearers of a world's burden, its greatest saviours, they intensify the ascending urge in man, and in their divine way are preparing him, so that he may recognise and receive the Light when it comes and be exalted and illumined into the higher consciousness in which he will find the perfection of his whole being.

That 'divine event' is going to happen in the life of man: the end of his human journey is in sight. For, is not the Light on the way of its descent upon the earth? And have not the liberators come? and their Call? and the Promise?.....

"A new Light shall break upon the Earth,
A new World shall be born,
And the things that were announced shall be
fulfilled."

Books consulted

Sri Aurobindo's *Essays on the Gita*, *The Life Divine*, *The Mother*, *Thoughts and Glimpses*, *War and Self-Determination*, *The Secret of the Veda*, (the last one is the title of a sequence published in the *Arya*.) The quotations are from the above books excepting the last one which is from *Prayers and Meditations of the Mother*.

CHAPTER VI

Integral Vision in History

THE discovery of his past opened before man a new world of knowledge. It made him conscious of his own heritage and inspired him to the study of his early story. Soon, however, he wanted to know how the story developed, how it attained its coherence and *ensemble*. The result of it was the idea of the 'History of History', the concept of a method and manner in the historical recordation of the course of human affairs. The idea varied according to the approaches made to the subject by different minds. But whatever the nature of this divergence, the evidence of archaeology and other kindred sources has proved beyond doubt that culture in the past was always, as it is today, an all-embracing development, an integral flowering of the many-sided genius of man. And no one form of it—however important to his progress—can fulfil its purpose if it is not given scope enough to fructify along with the other forms, all of which are the component parts of an organic whole.

Indeed, culture can achieve its true aim only when it conduces to the growth of man into his higher possibilities, when all his expressions converge towards a greater than his present life in the Ignorance. Man's first impulse to create and the dawning sense in him of his own power initiated and impelled that ceaseless striving through which he has been gaining new masteries and proceeding, now with sure, now with faltering steps, towards the distant, divine goal of his earthly existence. History begins with a portrayal of this aeonic pilgrimage and goes on increasing in content as man advances, enlarging the sphere of his creative activity. Thus with the progress of man the idea of history also becomes wider and more defined: history however will achieve its crowning success when it is able to interpret this march of man in the light of its inner significance.

Man by his mind builds stories about his adventure on earth, vaguely suggesting various kinds of future for himself; but none of them is complete, inasmuch as they fail to take into account the real intention in those adventures. Besides, being limited within its own range, mind cannot rise into the world of perfect knowledge; neither can it have a total view of things. And it is beyond its power to have a clear idea of the ultimate destiny of man. The key has, therefore, to be sought in the integral vision of the Truth, glimpsed by the early mystics but now fully seen and possessed by the Master-Seer of the race. It is the vision of the one infinite Reality unfolding

itself in the drama of cosmic evolution and seeking to manifest in man the delight, harmony and perfection of its own transcendence. To depict the story of how evolutionary Nature endeavours through the ages to prepare man for that glorious consummation will indeed be the truest function of history.

What follows is an attempt to point out the vast scope History offers for a comprehensive envisaging of its aims and objects, and to study through it the growth of an integralising historical idealism, and, lastly, to show from that standpoint how man as a race marches on in his journey towards the fulfilment of that vision. It is not possible within the compass of a single article to give even an outline of a large subject such as this. The present therefore can only be a brief introduction.

I

A biography usually describes the life of a great man. It shows how he lived and worked for a noble cause. It is thus a record of those activities of his for which he is loved and remembered. History may be called a kind of biography, not, however, of a particular man but of a people or of the whole of mankind. All the different stages in the life of a heroic soul—his childhood, youth and manhood—come to be told by one who portrays them in their proper perspective. But there comes a time in that life when the curtain is rung down on its play on

earth, the person having made his exit from it leaving behind him the legacy of the golden deeds he performed to the everlasting benefit of the race, especially of the people among whom he was born. It is, then, his biography that helps to perpetuate his memory. Likewise, there are many great peoples in history, such as the Egyptians, the Sumerians, the Babylonians, the Assyrians, and later, the Greeks and the Romans, who did live a long and fruitful life during which they built up the splendid structures of their civilisation, which are regarded as definite landmarks in the cultural progress of mankind. But nothing of their achievements remains today except the relics and antiquities most of which lie buried under the the earth. They have departed from the stage never to appear on it again. It is the voice of their history—the old monuments articulating it—that defies time and proclaims what they did to weave the many-coloured texture of their creative life.

But it is not that the same thing has happened to all the civilised peoples of the ancient world, that after they had lived their span of life they were overtaken by decadence and death. There are peoples however who were contemporaries of those oldest ones, and yet keep burning to this day the lamp of their ancient culture, notwithstanding the vicissitudes they have passed through in the long course of their history. History differs from biography in the sense that the latter ends with the life of one man, whereas the former does not or need not do so,

because it is concerned not with the life and work of a particular individual but with the aspirations and struggles, the failures and victories of the never-ending stream of humanity. There are peoples—the Hindus, for instance—who now live the life they lived the very dawn of civilisation. Indeed, China and India continue in history as the inheritors of a magnificent past whose spirit still lives in their creative strivings which throughout the ages have never known any full stop: that is to say, both of them yet retain their old strength and energy and are able to make ever-new endeavours, producing thereby results that compare not unfavourably with the marvels of their ancient heritage. Nevertheless, the histories of all the peoples of the world, dead or living, have their place in the larger conception of history being one unbroken record of the whole life of humanity and of the manifold deploying of its powers in every sphere of its activity from the very dawn of its civilised existence on earth. It is World-History which is 'One'.

What then are the elements that form the contents of history? and how are they woven together? A biography, as already said, helps us to learn about the various ways in which a heroic soul expresses himself. But all these expressions are more or less tuned to one particular theme or subject. It is rarely that a genius proves many-sided in the higher sense of the term. A Leonardo da Vinci is certainly an exception in the annals of human greatness; for, generally speaking, every great man has but one song

to sing, one message to deliver. And everything else that he does may have in it something remarkable and worthy of him, but it is not that for which he is immortalised in history. Rabindranath Tagore, whatever his contribution towards the rural and educational uplift of his country, will be remembered by posterity more as a master-poet and singer than as a champion of joy and freedom in education or a pioneer in the field of rural reconstruction.

Obviously enough, history cannot limit itself to a particular subject. It has to speak about the creative expressions, not of one man, but of a whole people consisting of individuals of various natures, such as saints and sages, prophets and philosophers, poets and mystics, artists and scientists, rulers and statesmen, and so many other kinds of men, great and small, all of whom play their respective parts in the common corporate life of the people. It may be noted that history cannot ignore the work of ordinary men whose silent services keep life going and lend colour to it. To be a complete picture of every phase of man's activity history must include the man who tills the soil, the one who builds the house, the one who by his labour makes the earth fit for man to live in happily. But all these find their place in history not as they merely are but through the contribution they make to the general progress of mankind. And it is for history to show how nations or peoples advance the cause of that progress, each following the law of its own being, its own line of self-development.

History therefore is a symphony of many tunes, an orchestra, as it were. It brings to light every effort of man to better and elevate himself both in his individual and collective life through the cultivation of the faculties that lie dormant in him. The progress of man means the progress of his culture, and man grows in culture in the measure his upward endeavours become fruitful. It is not that these efforts of man have always been crowned with success. Man has had to face failures; the obstacles in the way have many a time proved too difficult for him to overcome; and it is not unoften that he has himself forsaken the ideal and strayed into devious ways, lured by the desire to satisfy the lower aims of life. History will belie its function if it fails to take cognizance of all these aberrations of man. It must at the same time point out that what was regarded as impossible in the past has already become a fact of present achievement, and that the ideals of today are likely to be the realities of tomorrow.

History's is thus a comprehensive picture, an all-embracing panorama, epitomising on its canvas the vast and variegated drama of man. It tells us how in the past he built his society, how he responded to the call of the Spirit, how he worshipped his God, how he lived his life as a householder, how he evolved his culture, what dreams he dreamt, what visions he saw. It has therefore to speak of the spiritual seekings of man, of his religious impulses and his endeavours to cast them into forms, of the high ideas he expressed,

of the arts and sciences he developed. It is thus a record of the spiritual, religious and aesthetic life of a people as well as of its literary, scientific and political life. The religion and spirituality of a people give intimations of its soul. Its arts are the flowering of its inner aesthesis, an expression of its cult of the Beautiful. Its science and literature indicate the growth of its mental life. And its political strivings exhibit the evolutionary stages through which its vital-physical being passes acquiring more and more competence to organise and strengthen its corporate living, the chrysalis of the future unity of the race. History in this sense is a study of all the various creative activities of man. But in order that it may be a living organic whole it must point to the common ultimate goal towards which all these activities are leading, and probing beyond its normal depths, discover those deeper springs in man from where comes to him the impulsion to undertake his adventures in the world of 'sweetness and light' in which lies the seed of his ultimate perfection.

II

It is unfortunate that history today should in most cases be so apathetic to its own high ideal and unable to discharge fully its noble mission. Of the many external forms in which the collective being of man manifests itself, that of politics has become most powerful and governs almost every field of human

activity. And the integrity of history is one of those things which are being sacrificed at its altar. The idea that a nation's well-being depends solely on its political capacity and that history has very little to do with anything which has no bearing on the political affairs of a people are largely responsible for the narrow outlook that regards history as nothing more than a mere narrative of political happenings, of the rise and fall of kings and empires. Freeman's view that 'history is past politics and politics is present history' reflects almost correctly the present-day trend in historical thinking. Politics in the past did help to create conditions favourable to the growth of culture. But the democratic institutions of ancient India, in spite of the fact that they are the prototype out of which similar institutions in various parts of the world have evolved, cannot certainly be called the most remarkable feature of her true greatness. It is her unparalleled spiritual genius that marks her out as the one country in the world where every expression of life is inspired and motivated by the godward tendency of her soul.

Of what avail is history to India if it has no place in it for that which constitutes her real glory? The Mauryas of old did indeed build up the largest empire in their contemporary world and the system of polity they followed was an equally striking example of their political wisdom, yet it is not so much for these as for the unique religious idealism of one of their emperors that they deserve the particular attention of the

historian. The triumph of Confucian thought over the imperial might of the Chinese emperors is one of those significant events which give character to the whole history of China in which the masterly works of her artists, poets and philosophers have always found greater prominence than the services of her jurists, rulers and statesmen, eminent and constructive though they were. The history of ancient Greece will not only be incomplete but also a far from correct presentation of her great achievements if it speaks only of her democracy and nothing of the splendour that she was in art, literature and philosophy. And even today a modernist would resent a picture of the corporate life of his time if it describes only the brilliant successes and equally brilliant failures of the political experiments of today and makes no mention of its contribution in the world of culture.

In the early days of India and China, the ideology of politics was based on sound ethical principles. It did not show any such aggressive tendency as is found in many political organisations of the modern age. In India a *chakravarti-raja* would mean the lord paramount of a vast empire who must, as the term connotes, successfully discharge his twofold function of the king and the preserver of the Dharma. The king had moreover to declare himself as the servant of the people. It was his chief duty—dereliction of which might bring about his dethronement—to uphold the ideals of the race and promote them by providing the necessary opportunities, so that his people might strive to live

up to them both in their individual and collective life. The early monarchs of China were called 'statesmen-saints' who would never do anything without prayers invoking the aid of the gods. During later ages the 'scholar-officials' were the real rulers of the country whose sole care was to put into practice the democratic and ethical ideals set forth in the teachings of the great sage Confucius. Besides, "the Chinese civilisation is most decidedly organised for peace. . . . And China is the one country in the world where it is considered disgraceful to be a soldier."¹ Plato propounded the ideas of 'philosopher-king' and 'virtue-state', and, according to Aristotle, a king is a king only when he furthers 'the highest good' of his subjects. Thus the world, in three of its greatest culture-centres, China, India and Greece, passed through a common cycle or age of Dharma when the vision of its external form came to their thinkers mainly as a State founded on righteousness, the ideal rule of living. There is no evidence however as to how far the Greeks were able to give any practical shape to the Platonic or Aristotelian ideals, not to speak of later Europe which seemed to have broken away from Hellenic traditions; but history is certain that the Indians and the Chinese had been ever alive in their past to what their seers and law-makers had laid down, and that they tried to follow them in all their social and political endeavours.

If the history of a people should be concerned with nothing but its political activities, then the history of

¹ H. A. Davies in *An Outline History of the World*, p. 77.

many countries, especially of China and India, will have very little to say about their marvellous creations in the domain of culture, creations which have immensely enriched the civilisation of mankind. History books on these two countries, written from the political standpoint, do them a great injustice by presenting only one aspect of their creative life in which they fared perhaps not as remarkably as in those higher enterprises which, according to them, are the true aim of culture. And this narrow, truncated presentation proves all the more effectively misleading by the very reason of its being based upon a one-sided truth. It cannot therefore be accepted as a correct and complete study of the historical evolution of these two oldest peoples of the world. Politics alone cannot be the sole content of history, at any rate, of the history of China and India. In other countries too, as in these, it has been almost always only one of their many activities. How can history, pledged to that one phase of a nation's life, be called an authentic record of all the multiple expressions of its soul, far less a revealer of the secret intention of Nature in it?

The connotation of the term politics cannot by any stretch of ingenuity be so widened as to include the various efforts that a people makes to accelerate its national progress. Man is of course not a 'political being' only. And an 'Ideal State' is neither possible in the existing order of things, nor can it be a solution for all the problems with which he is confronted in his collective life. Rather, it is his politics which, more

than anything else, is the cause of the evils that afflict him today. It is true that politics has developed into a great force in the community-life of man and that without it the latter would not have attained its present organised form, but it is also true that the political ambitions of powerful nations, accentuated by exclusive materialistic tendencies, have blinded them to the higher values of life, leading them to aggrandise their collective ego, with the result that in his international life man has arrived at a stage—a critical stage, no doubt,—in which he finds himself thrown into a vortex of continuous conflicts and clashes, deliverance from which or from the like of which is becoming more and more impossible for him to think of. What part history is playing to help in inciting nations to these disasters will be for the future historian properly to judge.

But the most deplorable fact is that history has lent its pages to the propagation of things which are anything but wholly true. Facts freely distorted, falsehoods wantonly fabricated, fill and thereby desecrate the pages of history, so that they might serve the so-called political purposes which disguise the selfish attempts of human groups to satisfy the egoistic demands of their body-politic. History must be rescued from its abject slavery to such low aims. It must cease to be guided by any parochial leaning, any ulterior motive, but stand out as the sovereign voice of truth, and nothing but the truth, about the whole life of man, about his ideals and aspirations

and the various ways in which he tried to fulfil them.

Indeed, an integral outlook in history is impossible to develop so long as it does not present a complete picture of all the activities of man, so long as its writing is dominated by considerations other than purely historical. The historian has therefore to be above all petty passions and prejudices. He must discriminate between the true and the false, the genuine and the spurious, and accept nothing that does not stand the test of impartial scrutiny. His is the sacred task, he must never forget, of telling the whole story of man in its true perspective, the story of his historical evolution, of the forces and personalities that have helped to guide it through the ages.

III

Generally, the cultural achievements of man come into the pageant of history through the epochs and ages which are often associated with those great souls who compel universal homage not only by the dynamic excellence of their life and teachings but also by the service they render towards the intrinsic uplift of humanity. It is they who are the true creators of all that is of permanent value in the cultural expressions of the race. It is they who hold up the ideal and inspire man to make the endeavour. Was it not the Rishis of ancient India who evolved the basic principles on which the Indian civilisation is founded? and are they not still cherished by the people with

deep veneration? Do not Sri Krishna and his message figure more than anything else in the racial consciousness of India? The Buddha came and won his incomparable victory for all time. So did Christ. So did Ashoka, the emperor whose unexampled concern for the moral welfare of mankind made him immortal in history. To the thinkers of ancient Greece, Europe owes all the great beginnings of her philosophy and idealism. The teachings of Lao-tze and Confucius as well as those of the Buddha are the very bed-rock of Chinese culture. All these and many others—lesser luminaries—are the torch-bearers of truth and light, the harbingers of new dawns in the life of humanity. Little doubt that their life and work should form part of the history of the world, particularly of the countries which are hallowed by their advent. It is these leaders and pioneers of the race who make up the biographical element in history.

But again, history is not these heroic souls only. There is no gainsaying the fact that to them will always go the glory of being the discoverers of the goal, the explorers of the path which they have had often to hew out against enormous odds. But when humanity accepts the goal as its own and follows the path as that of its own destiny, its leaders then become one with it merging themselves in its common victorious march. History is concerned more with this march of man through the ages than with anything else. And these great souls come into its pages not so much for what they are by themselves as for

what they do to further the cause of human progress. Every great epoch in a country's history represents the cultural advancement made during it by that country through the efforts to which it is inspired by the teachings of the master-spirits born in it. It is generally the development of the mind, its mastery of powers by which to fulfil its higher possibilities that is indicated in the results of these endeavours. History here is the mirror that reflects the various stages of this progress of man from age to age. But to be true to its aim, it must also be a deep and penetrating study of every such activity as enlarges the domain of man's mind helping him thereby to grow in readiness for the greater illumination that is to come to him in the future as the crowning event of his sojourn on earth.

To the Chinese of old, history was like an unending scroll of pictures depicting the procession of humanity, and the scroll unrolls itself as man marches on, let us add, towards the destiny assigned to him by God. Ibn-i-Khaldun, the eminent Muslim thinker of the fourteenth century, discerned in historical ideology a world-view, an integral standpoint from which, he said, the progress of man as a whole should be assessed. But it was Voltaire, Condorcet and the French Encyclopaedists of the eighteenth century who gave a more definite form to this idea. Condorcet declared that man individually, and society as a whole, are capable of 'infinite improvement', and that history must show in bold relief the various

stages of man's growth towards that 'destination'. The French group of 'philosophes' believed that absolute freedom in every sphere of life is indispensable for man to be able to achieve that progress. Emerson, the transcendentalist, saw in history the works of the one mind common to all individual men. Frederick Morrison called history an exponent of human affairs unfolding the oneness of mankind that perennially fulfils itself in time through every expression of its creative life. To Croce freedom is the keynote of man's historical evolution. History is nothing, if not a record of man's struggle for liberation from the evils that stand in the way of his progress. There are historical writers who think that the process through which human collectivities have evolved into their present forms tends to culminate in a real and lasting solidarity of the whole of mankind. A more recent utterance is that of Nicolas Bedyayev who posits the idea of universal history as being the description of man's approach to his destiny in the light of the interaction between nature and the spirit in him. The emancipation of the spirit is therefore a necessity for man to achieve, the aim of his terrestrial existence.

An ancient Indian definition regards history as a record of those endeavours of man through which he seeks to satisfy "the four legitimate motives of life,—his vital interests and needs, his desires, his ethical and religious aspiration, his ultimate spiritual aim and destiny, in other words, the claims of his vital, physical and emotional being, the claims of his ethical

and religious being governed by a knowledge of the law of God and Nature and man, and the claims of his spiritual longing for the Beyond for which he seeks satisfaction by an ultimate release from an ignorant mundane existence.”¹ The psychologists and social thinkers of ancient India showed their deep insight into human nature when they discovered these fundamental motives of life and pointed out the need for man to fulfil them so that he might grow in readiness for greater perfectibilities. The ultimate end however has always been an ascent and liberation into higher and higher states in the world of the Spirit, which have to be approached through a disciplined fruition of the essential inclinations of man, that is to say, of his nature,—a fruition held as *sine qua non* for the all-round development of his whole being. For history to study and annalise how man exerts himself to that end in the course of his earthly career would mean its being a synthetic delineation of all the stages of his labour and journey towards the goal in different periods and in different countries.

What exactly is the meaning of this march of man? What is its destination? and how is history to accomplish its purpose as an interpreter of this world-movement of humanity? History so far cannot be said to have tried in all seriousness to give any definite answer to these questions that arise in the mind of those who see in the annals of man the working out of a ‘predetermined Plan’, the study of which, they think,

¹ *The Life Divine*, Vol. II, p. 583.

might lead him to an understanding of his future possibilities whose seeds lie embedded in all that he now is and in all that he does. The condition in the world today makes the demand for an answer all the more insistent. Indeed the time has now come for history to present a revealing picture about the meaning and purpose of man's adventure on earth. Most of the appraisements, cited above, do indeed point however vaguely to an integral vision in history, but they are not at all clear as to how it would actualise. They state the problem, at least many important aspects of it, but they seem to be far from the right solution. And whatever attempt is made in that direction results in nothing definitive.

That a march forward is always there in everything man has done and is even now doing does no doubt suggest some kind of progress, a going forth, a venturing on from that which is known towards that which is in the womb of the future. An idea of change from one condition to a better one, a growth, mental, moral or spiritual, seems to be implicit in almost all the above views on the march of man in history. But none of them throws any light on the process through which the change takes place, neither do they indicate the ultimate purpose of such progressive changes. The historical synthesis defined by India during her age of Reason made a nearer approach to the ideal, but it also was unable to offer a satisfactory solution because it emphasised a withdrawal into the Spirit, the Beyond, as the end of all human endeavour: all

the expressions of life were recognised in it but that they should be one in their intention to grow into a greater, a more harmonious fulfilment was not within its scope.

The many ways in which mankind, whether in groups or in totality, has taken part in that movement of change seem to be bewildering and make the principle of oneness in history somewhat difficult to comprehend. Indeed, a singleness of purpose is not so easy to trace in the so-called achievements of man. It is not only its many-sidedness but also the dissimilarity among the various forms of it that often hinders the correct perception of a common higher objective in all human strivings.

But the more fundamental reason is that the power of the mind by which we try to penetrate into the secret mystery of the world-drama is limited to a plane which is veiled by the power of Ignorance. Mind is thus unable to give us a deep, complete and integral view of things. Unless the Light from above breaks upon that plane and rends the veil and opens it to its native splendour of Knowledge from which it originated, mind remains confined to its own narrow groove, taking the parts for the whole, the fragments for the vast. And instead of tending towards a solution, the problem becomes more complicated.

This is indeed a crisis in the realm of historical thinking. The way out may be sought, as has always been done whenever mankind has been faced with a similar situation, in the teachings of the Pioneer-Souls

of the race, who by rising into a higher consciousness have attained to the integral vision of the supreme truth of existence. An attempt is therefore made here to study the ideology of history from the standpoint of what Sri Aurobindo has laid down as the basic principle of an evolutionary manifestation in the earth. History here is a reflector of the dynamic process by which the divine plan is fulfilling itself in man through all the progressive stages of his life on earth.

IV

That history is a record of the progress man achieves through his various activities, mainly those of his creative life, has been already discussed. But the function of history is not merely to make up and keep an inventory of those activities as they outwardly are. It must also discover in their, and through them in its own, development a principle of organic growth, that evolves with the progress of man; and when history does that it becomes its true self. As dry bones do not make a human body, but flesh, muscles, blood and so many other things and, above all, vital energy are necessary to make the body complete and living, so also a mere conglomeration of facts and events does not build history; it is the way in which they are presented bringing out their hidden meaning, the intention of Nature in them, that gives history its integrality and its force of life. It has already been shown how the various forms of the culture of a race become the

contents of its history, not as so many isolated units pieced together but as expressions of the creative soul of that race, through whose impact they coalesce into a historical wholeness mainly as its extrinsic phenomena.

This is how the objective integration in history has taken shape, to which a definite impetus was given by the French Revolution that roused the nations of the world to a new sense of their rights and liberties and also of their past glories, providing a most favourable condition for their independent growth and evolution. Following the French Encyclopaedists, the nations started to prepare their histories in which a place was found for all the many ways through which they tried to express their souls. And these registers of national achievements became more and more enriched and accentuated as archaeology and other allied sciences began to bring to light hitherto unknown evidences of the nations' antiquity and ancient heritage, whenever they were available. But what is missed in these early efforts is a world-standpoint, a global outlook; and they betray a tendency to self-limitation in their scope and purpose, resulting in what are known as the so-called national histories of today. These regional records of human affairs have often been found to be stamped with a local colour which becomes deeper and louder as the particular human group inhabiting that region takes to a more and more egoistic and exclusive line of self-development. There is a centre in them and a force as well, but it is a force that is too concentric to

allow anything within their orbit to widen and expand. All objective studies suffer from this defect, and history, whenever committed to this aim, finds it difficult, if not impossible, to transcend its limitation.

This "realistic" trend in historical thinking took a better turn when the first rays of a new idealism began to be visible on the intellectual horizon of man. If the previous stage had been one of individualism in which the peoples of the world proclaimed their new-found nationhood as a criterion of their distinctive historicity, the one that followed may be characterised as a subjective stage in which the study of human affairs was in the main directed towards the discovery of those laws and forces that seem to guide and motivate the destiny of man as a whole. The world-history came into existence and with it the concept of 'One History'. It is a kind of historical romanticism, as it were, which based its rationale on the essential unity of the human race and on the idea that the highest aim of all social endeavours is to achieve that unity by which alone can permanent peace be made possible. This is certainly a great advance in the idealising of history; and it became more definite when the catastrophe of 1914 compelled man to think that the world could not be saved from such disasters in the future unless there was a real solidarity among all its peoples. It went so far that even Utopia, that is to say, a perfect world of peace and plenty, seemed to figure in the imagination of the historical idealists. It would not of course be true to say that these two stages are

separatively apart. In fact, as in the general cultural cycle of mankind, so also in the cycle of its history the age of individualism has always in it certain elements of subjectivism. While therefore the nations were trying to find their own selves, they came upon the discovery that the force or forces that governed their destiny were everywhere the same and that there seemed to be a common goal for them.

These ideas found more prominence in, and gave meaning and motive to, the writings of those historians of the present century who took up the entire field of human activity as their subject and the whole world as their canvas on which to depict the theme in all its variegated colours. But their vision was not deep enough to reveal to them the inward significance of the human affairs, for which a higher than mental power is necessary. Hence they could not get out of the constructions built up by the mind and founded in the norms of humanism that had its birth in the Renaissance of Europe. Man dominates the scene. It is he who is the master. It is he who is the poet, the artist, the thinker, the scientist, the builder of the State. He is the creator of the splendid things that make the fabric of his culture. He will therefore be the harbinger of the new world of peace and freedom that is to come in the future. It is a brilliant picture no doubt that the best of the history books, written in recent times, make it their business to give about the past, present and future of the human race.

Yet the solution of the problem is as distant today

as it was before. Night sits heavy on the world without any prospect of the dawn. And man gropes in the the darkness that thickens everywhere. It is true his subjective thinking has opened him to the truth that every noble deed he does, every beautiful work he produces, every great thought he expresses, is always for the whole human race with which he is one both in his cultural and social life, and that there is a common goal, the goal of freedom and unity towards which the whole humanity is moving through all its trials and travails. But this only gives a wider meaning to his ideal of humanism, and does not bring to him in its fulness the truth he needs.

The question is, whether it is only man who is the be-all and end-all of the human drama, whether the stage is set only for him to people all its scenes and through them to sing the paeans of his own triumphs. If that is so, if that is the sole implication of what man has been in the past and is today, then it is difficult, if not impossible, to conjure up a bright picture of his future. And does not the gloom that envelops the world today point to the same conclusion? What then is the solution? And how is history to prove itself as an illuminating guide all along the chequered march of man through the ages? The march has its periods of struggle against adverse forces, of exhaustion and failure and distress, when wrong paths are taken. It has also its glorious days when victories crown the efforts of man.

It is this march of humanity in all its stages that

integrates itself first into the objective, and then or simultaneously with it, into the subjective elements of history. But the journey does not end, neither does the traveller show any sign of exhaustion. It has rather been a ceaseless one; only its continuity is marked by upward and downward movements. Thus, every period of decline is followed by a fresh endeavour into which man is stirred by the unfailing force of his life. Every deviation from the ideal is followed by a reaffirmation of it, which the past dawns of the race help to rekindle in its memory. And what is most glorious is that when man is faced with a crisis and a decisive step is to be taken, there appear on earth the Vibhūtis and the Avatars of God who come to bring about his deliverance by awakening him to the light of the Spirit in him, the light that illumines the path for his soul to renew its striving for growth into greater possibilities. This light in man is the true truth of his life. It is to be aware of and live in it that the call has again and again come to him from the saviours of the race. Indeed, Christ's 'The Kingdom of Heaven is within you', the Buddha's 'Be a lamp unto yourself', Sri Krishna's 'Seek refuge in the Lord seated in the heart', the declaration of the Rishi in the Upanishad 'Thou art *That*' are verily the same gospel in the teachings of all God-men and seers. This divinity of man, then, is the key to his journey on earth, whose meaning will be fully unveiled when the divine spark in the finite being flames forth into the supreme Fire of the Infinite.

V

During her age of the Spirit the early mystics of India discovered—and Sri Aurobindo today has re-visioned and revealed in its deeper significance—the hidden truth that in order to have delight of manifestation the One Reality becomes Many by plunging into the ‘shadow of its own Light’ and through it, first organises the form of matter, itself remaining in it to create by its own upsurging Force conditions for a higher formulation of itself. And when Matter is ready the Force breaks into a splendour of living forms. When, again, these forms prove capable of a still higher evolution there appears man, the mental being, possessing a power by which he is distinguished from the animal even as life is distinguished from matter. Matter, life and mind are thus the three fundamental principles in and through which the Supreme has taken forms and entered into the terrestrial becoming.

But man as he now is, imperfect and subject to the Ignorance, cannot of course be the last term of evolutionary Nature. There must be yet higher statuses for her to ascend to as the culmination of her evolutionary endeavour on earth. And man being the highest point so far reached by her in her upward drive, she is preparing him for that consummation. “The animal is a living laboratory in which Nature, it is said, worked out man. Man himself may well be a thinking and living laboratory in whom and

with whose conscious co-operation she wills to work out the superman, the god. Or shall we say, rather, to manifest God?"¹

That is why there is always in man the urge towards perfection, the urge to exceed himself, which is a force in him derived from the Will of the Divine. He seeks perfect beauty in art, perfect truth in philosophy, perfect law in science, perfect health in his day-to-day living, and, above all, his own perfection in all his spiritual endeavours. And it is the business of Nature to keep burning the fire of this quest in him and provide conditions in which he may give full play to his creative faculties the cultivation of which has helped him through the ages to grow and to increase, to widen and to expand in all the members of his being. Indeed, any true progress would have been impossible if man had not within him this impulse to search for his own perfectibility. "All man's agelong effort, his action, society, art, ethics, science, religion, all the manifold activities by which he expresses and increases his mental, vital, physical, spiritual existence, are episodes in the vast drama of this endeavour of Nature."²

Nature's purpose in human evolution is fulfilled when man is ready for emergence into superman. But Nature only prepares. It is the Paraprakriti, the divine Conscious Force, who is the ultimate Source, the supreme Fashioner of things. It is Her Light

¹ *The Life Divine*, I, Vol. p. 5.

² *Ibid.*, Vol. II, p. 597.

whose manifestation in man will change his imperfect nature into the perfect Nature of the Divine. Beyond this triple world of Ignorance are the worlds of Cosmic Knowledge, and beyond them again are the supernal planes of Light from where the divine Shakti—of whom this Nature is an executive Force—creates and directs the whole system of worlds.

Indeed, the Mother stands even above all these worlds bearing in Her eternal consciousness the Supreme Divine. The Supreme is manifest in Her as the everlasting Sachchidananda and through Her in the worlds and planes which are Her immediate embodiments. In Her own mystery She stands as the Infinite Mother of the gods and projects Herself into all that forms the Great Play. All is She, because all are the parcel and portion of the divine Conscious-Force. This world of Ignorance and imperfection is upheld by Her and it is She who guides it to its secret aim. She is here as the Mahashakti, seeking by Her creative Light to build in the nescience of Matter a godlike Life,—the flowering of the life, soul and mind in matter into the infinity of the Spirit. She works through Her Powers and Personalities, governing and leading the lines of development for their forces so that the world may progress towards its goal. But also She prepares and shapes things of the earth that “She may manifest in the physical world and in the disguise of the human consciousness some ray of Her power and quality and presence. All the scenes of the earth-play have been like a drama arranged and

planned and staged by Her with the cosmic Gods for Her assistants and Herself as a veiled actor.”¹ And it is always Her aim in this earth to create a new world of harmony and perfection and evolve out of the mental man the supramental being.

This is the way in which the Divine who has descended into the material consciousness recovers in it His own splendour in man transformed and perfected by the luminous dynamism of His own Force. Whatever might the humanist say about the unsurpassable glory of man, however emphatic might the rationalist be about the absolute value of human reason, a deeper knowledge proves to the intuition of man that the real player in the world-drama is the divine Shakti Herself—She alone is the play, the player and the playground. All are Her forms which She creates, develops and leads to their highest efflorescence. And man being Her chosen vehicle for a greater manifestation She works in him through Nature that he may wake up from his sleep in the Ignorance and open to Her Influence, to Her Presence and Power in him, and thereby grow into his perfection—the blossoming of his inherent divinity. For, if man is God self-involved and progressively self-evolving in form, the conclusion becomes inevitable that his perfection and fulfilment can be nothing short of a full emergence of that Godhead in him. And it is only the power of the divine Shakti, not any human endeavour or *tapasya* that can effectuate this consum-

¹ *The Mother*, pp. 45-46.

mation in man. Indeed, She alone "can rend the lid and tear the covering and shape the vessel and bring down into this world of obscurity and falsehood and death and suffering Truth and Light and Life divine and the immortal's Ananda"¹—the most perfect of things into which man in his life, mind and body, is destined to be new-born. This is the meaning of the Supreme's earthly adventure, the meaning also of man's heavenward journey on earth.

The divine Conscious Force is infinite in Her powers and personalities. But it is in Her four great Aspects² that She is manifest in the earth-consciousness for the accomplishment of Her immediate purpose in it. The first is Her aspect of calm wideness and comprehending wisdom, which in man is the inspiration behind all his spiritual enterprises, the works of majesty and greatness. The second is of power and passion and force, which exhibits itself in the dynamic and heroic activities of man. The third is of beauty and harmony and rhythm, which in man is his aesthetic impulse that seeks to make the earth an abode of the Beautiful. The fourth is of practical knowledge and flawless work and exact perfection, from which come science, craft and technique of things for the perfect organisation of all kinds.

These powers by their insistent pressure from above have not only helped the growth of man, the mental

¹ *The Mother*, pp. 84-85.

² Maheshwari, Mahakali, Mahalakshmi and Mahasaraswati, as described in *The Mother*, pp. 48-50.

being, but they have also been sometimes sought after by him and admitted into himself and assimilated in proportion to his developing capacity. Because they are also within him—latent, involved and steadily pressing for evolution—man feels a natural impulse, an irrepressible yearning for their discovery and possession. And in epochs of resurgent creativity he has at times broken beyond the normal confines of his mind and created right out of the very heart of his experience of them. Indeed, his art and literature, mysticism and spirituality, religion and philosophy, science and politics are but expressions, plenary or partial, of these powers to which he has ever turned, consciously or unconsciously, at all stages of his evolution. The progress of man is the progress of his evolving Spirit which is effected through his culture, the outcome of his cultivation of these powers in him of the divine Shakti. And it is for history to study this progress and portray the rise and growth of the nations and peoples of the world, unravelling the various ways in which they incarnate and give form to these powers, and thereby prepare for a greater destiny in the future.

VI

The historian has been a realist concerned mainly with facts and events that constitute the cultural life of humanity, and his work has resulted in the integration of the objective elements in history which constitute the foundation of all historical undertakings. He

has also been an idealist, roaming in the world of thought which has given him the vision of freedom and unity, and in the light of this vision he has tried to reconstruct history, though still on the basis of the objective realities, demonstrating the essential oneness of the various creative activities of man, by which, as the truth of it becomes more and more evident to him, the diverse factions of the race would be forged into a homogeneous whole. The history of man has been and is still being written from the standpoint of this cultural synthesis, however inchoate in form it may appear to be; but where are the ideals of unity and freedom it inculcated? Have not all its golden dreams remained dreams till now? Nevertheless, ideals are not chimeras; they are potential realities and they have in them a truth which the race is certain to realise, but only when a radical transformation of man's nature is effected by his ascent into a higher than mental consciousness wherein alone peace, freedom and unity take their perfect forms. It is to this inevitable destiny of his that man is being led by Nature as an evolutionary necessity.

The great epochs of history, its golden periods, are the decisive stages through which this march of man has been accelerated. Even periods of decline and darkness with all their chaos and conflict have not inconsiderably helped forward the growth of man towards that many-sided achievement. To attain this consummation it was necessary that man should reach

the very summit of his earthly possibilities by developing to their utmost all the powers that lie dormant in him. And when he himself does not do so and unconsciously gives way to sloth, Nature shakes him into a new start.

Thus, when life stagnates, progress is clogged, and there is no new going-forth, war becomes a necessity to open for man fresh channels of self-expression—war at once on subjective and objective planes of existence. Many such, blood-baths result in the regeneration and remoulding of the old and effete human material, even as the arts of peace exalt and increase the cultural content of the national being. The aim of history will be to discover how in every one of her workings in man through the ages Nature has been seeking to accomplish her evolutionary purpose. And in order to be able to do that successfully the historian must have an integral vision of the whole plan and working of Nature as well as of that ultimate end towards which she is inevitably advancing.

Objective history has tried to answer the question, "What are the contents of history?" Subjective history's attempt has been to trace how they come into being and what they lead to. The turn has now come for the student of the Spirit in history to explain the why of them by bringing out their inner implications. The historian has therefore to be a seer. He must have an intuitive insight into the very source of the human drama where Nature initiates.

those movements that are the pageant of history. But beyond Nature he will have also to go into the world of basic forces, of fundamental realities, into the flaming heart of things where all actualities are born and take their first shape. It is to a vision of this world of the Mother that the seer-historian must first rise, and illumined by its Truth, he will proceed to his task of reconstructing the history of man in which he will describe how Nature fulfils the Will of the supreme Shakti in the terrestrial evolution, what are her manifold steps and how she takes them in order to prepare the earth for the Mother to manifest in it the Light of the Supermind, and evolve the gnostic being. The creative activities of man—so many milestones in his onward march—will be for the historian to assess as the expression of Nature's striving in man to cultivate and refine, to exalt and elevate the various parts of his being, so that they might be plastic enough to the Influence of the Mother and thereby change into their divine counterparts.

When his physical being became sufficiently developed through the strenuous exertions into which man was forced by the unavoidable conditions of the primitive phase of his life, his vital began to reinforce the efforts that he made to enlarge the sphere of his actions and interests, economic, social and political. The higher vital in him growing through his creative action has been always behind those activities of the mind which produce all that is of value.

in his culture. Mind, however, is the most cultivated of the planes in man; and nearly every one of his cultural endeavours has contributed to its growth which is so important to his evolution.

It is remarkable that man's quest of truth is almost coeval with his civilised existence. Thus religion, occultism, mysticism and spirituality have through the ages helped in the emergence of the spiritual man. The moral content in religion as well as other mental and moral disciplines have promoted the growth of his ethical being. His art, music and poetry have in their pure forms brought down light from the deeper reaches of the consciousness and by it refined and enriched his aesthetic and emotional being. His philosophy and science have increased the light of reason in him, the latter giving to his mind the power of precise observation and masterful manipulation of matter. It is not that this process has gone on uniformly throughout the ages. There have been aberrations, deviations into wrong paths and retrogressions as well, when the race forsook the ideal and ran after lower pleasures and ceased to create things that could tend to further its collective well-being. The historian here will show this aspect of the process with its inner cause or causes no less vividly than the bright one which he will depict, illustrating how man's co-operation with Nature has always resulted in the advancement of his culture, and therefore, in his progress towards the goal.

It is true that the past dawns of human culture were the dawns of real glory and greatness, but it is also true that a blazing noontide waits for the advancing man in the near future. "A great past must be followed by a greater future."¹ For if the morning shows the day, the splendid mornings of the past are a sufficient promise of the ambient warmth and illumination of the coming day. Man, as he grows, resumes and integrates all his past and moves forward creating the greatness of the future.

Progress, therefore, is the whole drift and purport of human evolution; and it is to a delineation of this spiral progress and to a discovery of its hidden springs and pregnant, prophetic significances—to a reading of what has been and a revealing of what will be—that history should apply itself with the integrality of its subjective and objective resources.

VII

The historic development of mankind is too complex a phenomenon to allow of any clear division into separate periods which may be presented against a common background. That history is fundamentally the working out of a 'predetermined Plan' or a 'creative Idea' is even more difficult to discover in what externally the epochs in it are to the student of human affairs. But a deeper view of things vouchsafed to the seers reads in history a purposive process

¹ Sri Aurobindo in a letter to a disciple

through which man is led from age to age so that he may realise the summit of his possibilities individually as well as collectively. History reflects the integral vision when it studies all the endeavours and achievements of man as a manifold organic progression; and the vision finds its wider meaning in history when the latter depicts the story of how man as a race moves forward in his chequered march to that goal.

A perfect order of collective spiritual living is the hidden aim intended in the evolution of humanity. Perfection of the individual fulfils itself in the coming into being of a perfect community. The core of all human progress is an inner preparation of man for that great end of his social existence. Sri Aurobindo sees in the story of this progress several broad stages¹ through which man passes in order to arrive at the highest point of his evolution on earth.

The first of these is the symbolic stage which began in India when the earliest and the most luminous of the spiritual dawns lit up its immortal fires in the intuitive horizon of the Rishis who saw in them the infinite splendours of the Supreme and that supernal Light of His which was to come down on earth and new-create man into a divine perfection, or rather to manifest the divinity that is already there

¹ Sri Aurobindo takes up these stages as the basis of a most illuminating discussion on the Psychology of Social Development in the *Arya* (Vols. III & IV). A bare outline of them in their historical setting is attempted here.

in him, because that is his inevitable destiny for the attainment of which Nature in him has been in constant travail. It is to these early fathers of Knowledge that the race is indebted for the profoundest truth-visions that have ever come to any mortal. The various cults of India, all her social and religious institutions are significant symbols of the eternal verities seen by the ancient mystics.

An entire self-giving to the Godhead for the manifestation of His power in the human aspirant is the central discipline of the Veda. This is symbolised in the cult of sacrifice which governed the whole society, all its hours and moments. Similarly, the gods in the Veda are, each of them, various powers of the Godhead. The worship of so many deities—facets of the One—has its origin in the Vedic pantheon. In the same way, the system of caste and the fourfold motive of life are institutional expressions of truths about man and his higher possibilities, which in their essence were first revealed in the Veda, rightly called the very bedrock of Indian civilisation. Spiritually, these institutions, when living, did exert subtle influences on their adherents helping them to grow in their inner life. Socially, they united the race into common endeavours to live up to the ideals set forth in them. And culturally, they provided scope for the development of the various faculties of man, particularly those of his mind and heart.

This growth and fruition of the mind and heart, it may be incidentally mentioned, is an evolutionary

necessity, and it has not always and everywhere been a straight upward movement: it has had its inevitable periods of decline when the growth was effected through the fulfilment of their downward inclinations which fundamentally described a curve of descent in a circle of progress. Neither is it that man has always taken the right path. His deviations have been largely responsible for his journey being unnecessarily long and at times so very arduous and complex.

Whatever that may be, the fact is there that each phase of the symbolic stage and that of the later ones used for its characteristic self-expression a special faculty of the human consciousness developed during the period of that stage. We may classify them by saying that it was intuition that gave its stamp to the Vedic age, the intuitive mind to the Upanishadic, and the ratiocinative mind to the period of the Dharma Shastras when the social institutions were given their final forms and attempts were made to explain and justify things in terms of reason.

The symbolic stage and the subsequent ones did not, however, arrive at the same time everywhere; neither was the Ideal seen by all the countries in the same way. This stage in China was represented by her greatest Classic, called the *I-Ching*, or the "Book of Changes", dated a little earlier than the first millennium B.C., which contains mystic trigrams about the oneness of heaven and earth in a universal rhythm, called *Tao*, the heavenly Way. According

to it, man becomes truly himself when he realises his harmony with heaven. About six centuries later, the great mystic Lao-tze reaffirmed the same truth in his idea of 'Cosmic Unity in the Universal Mother'. The *I-Ching* is to China what the Veda is to India. To it China traces the origin of all her mysticism and thought. And it was mainly her intuitive mind that was at work during that age. Her great sage Confucius called himself 'a transmitter of the wisdom of the *I-Ching*'. Taoism occupies a very important place in the early thought of China out of which her culture has evolved. As a creed it symbolises for the race the truths about the perfectibility of man that came to her mystics millenniums ago. Many of her higher endeavours were inspired by it. To the Chinese the 'Ways of the Ancients' are always the best, since they aim at the 'Perfect Man', the 'Higher Man'. Out of these grew their ancestor-worship which has been religiously followed by the whole people from time immemorial as the symbol of their traditional belief in the spirit of the past, that is to say, in the 'Ways' discovered by the pioneers of the race and handed down from generation to generation for its collective well-being. In this common instinct of the people to adore their forbears lies the secret of China's national solidarity.

The esoteric doctrines of the early Egyptians made a near approach to the symbolic stage, and in Greece it was echoed by her fathers of knowledge who founded the mystic rites of Orpheus and the secret initiation of

Eleusis, both of which are said to have influenced the numbers and figures of Pythagoras and Plato. The Greek thinkers expressed in these symbols their ideas of perfection which they conceived with the help of their disciplined intellect. The age of symbols is indeed a glorious phase of human adventure; and its history has yet to be written showing how as a result of their incomparable spiritual enterprises the ancients had the vision of the Ideal and evolved those institutions through which man was to prepare himself for the great future when the Ideal would become real in his individual and collective life. The symbolic is an age not only of great beginnings but also of wise path-findings.

The later days of the symbolic stage are marked by a tendency towards the interpretation of the ideals and institutions of the past from a philosophical and ethical standpoint. Through the increasing growth of this tendency the age of symbols merges into the typical phase of human history, represented in India mainly by the Ramayana and the Mahabharata. The age of the Ramayana was the flowering of moral idealism, of the ethical mind; the age of the Mahabharata, that of a puissant intellectualism, of the intellectual mind: but both were inspired by the Godward bent of India's soul. Buddhism, built later on almost the same ideology, was another notable effort to cultivate the ethical side of human nature. The call of the Divine upon the Aryan man, rung in the trumpet-notes of the Gita, was the greatest social

ideal of the age. To see God and to see Him in one's self is not the only aim. To be perfectly equal to all beings and to see and feel them as one with oneself and one with the divine; to feel all in oneself and all in God; to feel God in all and oneself in all—this was then, as it now is, the true aim of the spiritual seeker. In China the typical phase was that glorious age which was heralded by Confucius who gave a clear and bold definition to the ideals of life and conduct and laid down the foundation of her social and collective life. It was this great sage who preached the message of *jen*, or universal love, and propounded the doctrine that in order to live one must let others live, in order to develop one must let others develop. Both China and India are at one in their conviction that there can be no freedom for the world so long as a single soul remains in bondage. The Buddha turned back from the threshold of Nirvana and took the vow never to cross it so long as a single being would remain subject to sorrow and ignorance. Greater social ideals have never been before any other country of the world. History must tell the story of how China and India tried to live up to these ideals and how by their effort to do so they built up for all time a marvellous spiritual unity which is a unique social phenomenon in the history of mankind. Even in their political thinking both of these peoples, as already stated, were guided by their high religious idealism. The early Christians of Europe made an attempt to uphold the moral ideals of Christianity but nothing definite came out of

it, because Europe was prone more to the old Greco-Roman mentality than to any religio-ethical adaptation of Hebraic traditions. Besides, the spiritual elements in the teachings of Christ were not fully understood by their exponents. And the mystics who had glimpses of the truth have scarcely been an influence on the life of the people.

In the typical age itself it was the outer institutions and traditions that began to be given more importance than their original spirit and intention, although the idea of their being a cohesive force in the collective advancement of the race emerged clearer than before. When this tendency grew stronger the typical phase passed into the next age of convention during which everything in society was regarded as a sacrament and therefore, inviolable. Attempts were made to fix everything into a system, to stereotype religion, to bind education down to tradition, and to subject thought to infallible authority. And the result of it was that the whole social system became petrified into particular forms and structures which admitted of no renovation, no readjustment to changing conditions in the external life of the people. The custodians of the society made it their sole business to preserve those forms to that end, to interpret the texts in their own way. The ordinance of Manu, the code of Confucius, the injunctions of the Pope, were held as supreme and sacrosanct, and that too not for what they were worth in their spirit but only for the very letter of them. The claim of capacity was gradually

replaced by that of birth in the determination of caste, and the religious life lapsed into a soulless formalism having lost touch with its spiritual foundations. The four *ashramas* or motives of life, existed merely as a mechanical routine, instead of as necessary aims to be fulfilled for the all-round development of man. The worship of ancestors took the form of family exaltation. And much worse things happened in Europe in the name of religion. Yet, in spite of all these rigidities, the conventional stage in India, China and Europe was marked by long periods of great cultural revivals that proved the immense vitality and wonderful creative energy with which Nature had endowed these countries so that they might be able to live fruitfully and advance steadily towards their future destiny. Another saving aspect of this stage was that in its effort to preserve the shell it helped in a way to preserve the kernel too. Thus, beneath all excrescences there was always the shining core of the ancient vision, though for a time hidden from the human view.

The conventional is a remarkable phase in the historic evolution of India. It is the longest and culturally the most creative epoch in Indian history. A period of over a thousand years of it is known as the classical age when the highest point was reached during the time of the Guptas which witnessed a most brilliant outburst of the literary and artistic genius of the race, almost incomparable in history. After going through the experiences necessary for a

greater rebirth India evinced all through this period ample signs of preparedness for a renewal of her life. But it could not then come about as the true significance of the ancient Ideal was not reaffirmed and the people had already opened themselves to the reactionary forces of decline. Nevertheless, the conventional mind of India during this period was largely responsible for the protection of her religion and society from disintegration and through them of all the past achievements of the race, and that at a time when they were being interpreted in a dry formalistic way. Almost the same thing happened in China. An exclusive regard for everything of the past was then the dominant tendency of the Chinese mind. This conservative attitude is ingrained in all Eastern peoples.

As in India, so also in China, elaboration of formulas out of the ancient teachings was during this period the main activity in the world of thought. But in art and poetry China rose to classical excellence when the T'ang and the Sung dynasties were ruling over the country. The conventional stage in Europe was the Middle Ages, and the Renaissance,—not the Reformation, for reasons already stated—was the zenith of its cultural expression. The Renaissance opened before Europe the treasures of the Greek learning, the study of which did on the one hand rouse her interest in the beauty of life and nature, so gloriously articulated in the arts and letters of the period, and on the other, kindled in her a

spirit of enquiry and research, the spirit of a rational approach to things, that was to break into a passion for truth, a demand for reason in the age that followed. It is because of this that the Renaissance is often called the inaugurator of the modern age. Indeed, all later upheavals in Europe, religious, social and political, are in a deeper sense different expressions of the spirit that took its birth in Italy in the fourteenth century when Petrarch was writing his odes and sonnets.

The age of convention had other aspects that deserve mention as having had a bearing on the historic evolution of humanity. Generally, it gave the conventional and conservative mind of man its round of experiences, but during its epochs of revival his creative and aesthetic mind also received its growth and fruition. And its finest works of art showed man's openness to higher levels of consciousness, and that in a manner which has no parallel in the whole history of art. It was the light of the Spirit that glimmered in them, waiting for its hour to reveal itself fully in the cultural expressions of a perfected future humanity. Indeed, it was the same light which has always been there in every true creation of man as an evidence of Nature's endeavour to sustain the various forms of culture till they attain their highest excellence in a greater future.

The last days of the conventional stage however present a dismal picture in human history. There was the society, perhaps more defined in its aims

than before, but it was so much hedged in by irrational rules and cramping restrictions that it could not function as a living organism. There was also the larger collectivity, better organised than before, but its real being had yet to develop into a governing force in all its activities. The religious life was choked with the fungus growth of blind practices, meaningless dogmas and superstitious beliefs. And the intellect was forced to engage in empty logomachies for the defence of those unwholesome accretions. These are not certainly the conditions in which any progress is possible, or any new going-forth. The only way out was the liberation of the mind from its subjection to the dead or dying forms of the past and to the prevalent reactionary forces. The key of knowledge had to be repossessed with which to unlock the door of the future. Nature, therefore, called upon the individual, the individual who is always the pioneer and precursor, to shake off all slavery to the past, to steer clear of the chaotic ferment of the present and to rise up in his own strength and right and freedom to know and to master, to conquer and to create.

The first response to this is witnessed in the revolt of Reason against the absurdities so much rampant everywhere in the name of religion and learning. The awakening individual began to feel that the widespread rule of those degrading tendencies had to be overthrown, all old notions must be shattered, and that the barriers—the walls of unreason—that

thwarted the free development of man had to be broken down; and man must go in for 'fresh fields and pastures new'. Thus began the age of individualism whose culmination was the triumphal progress of physical Science. Man denied everything that would not satisfy the evidence of the senses. He questioned the validity of things that would not stand the test of reason. He ventured into the unexplored. He set out for the unknown. And to all these he was impelled by a search for knowledge, a quest for truth, that gave the individualistic age its real sense as a necessary phase in the historic evolution of mankind.

The achievements that crowned these mighty efforts of Europe where the age had taken its birth,—since she was a more suitable field for that than conservative Asia,—proclaimed her conquest of matter, her mastery over the potencies of universal Force, that brought to man a rich harvest of new knowledge—the knowledge of the physical, of the external order of things, through which his materialistic and scientific mind had its growth and fruition and his earthward desires their satisfaction, if there could be anything like that for them. But is it not only a going to the one extreme of things? And the other extreme, we know, is the knowledge of the supra-physical pursued and attained by the East, by India in particular where in later times an exclusive emphasis on it led to a recoil from life, a refusal of its values, which slowed down the *tempo* of her progress

for many centuries. If Europe accepted nothing but life and matter as the only truth and denied everything else, even God, India rejected everything, even life and accepted nothing but God. The truth as revealed to the vision of ancient India was that matter and life are as much real as God. Matter is verily the body of the Spirit, and life the expression of its energy, and in the discovery and possession of their harmony lies the true meaning of things.

Yet the value of critical and rationalistic attitude that Science developed in man can never be over-estimated. It is because of his insistence on reason that man is becoming more and more free from his infra-rational instincts, impulses, blind fervours, crude beliefs and hasty prejudgment, and that he is today nearer 'the full unveiling of a greater inner luminary'. Science is indeed "a right knowledge, in the end only of processes, but still the knowledge of processes too is part of a total wisdom and essential to a wide and clear approach towards the deeper Truth behind."¹ That Science has already begun to open to a higher order of things is evident from the views of many of its eminent votaries that scientific discoveries have always behind them some kind of intuitional experience and that beyond the world of sense-perception there exist other worlds of 'Thought' or 'Ideas' which are no less real than the former. Thus Science which ushered in materialism seems itself to be paving the way for its exit.

¹ Sri Aurobindo in *Evolution*, p. 29.

The age of individualism carries in it the promise of the next age of subjectivism. Nay, it even suggests the latter and passes through phases in which the two become indistinguishable. When his Science makes man conscious of his latent capacities the cultivation of which brings to him the knowledge of the external world, he feels an urge to know what he himself is. As this seeking grows, man begins to turn inward and glimpse, however dimly, the truth and law of his being to which, he finds, he could relate the truth and law of the cosmic process, a rough mental picture of which being already there before him presented by physical Science. But a clearer conception of these things, of the secrets and profundities of the soul in man and the soul in the world is beyond the ken of intellectual reason. "Knowledge waits seated beyond mind and intellectual reasoning, throned in the luminous vast of illimitable self-vision".¹

Rationalism has had its day and it was also a necessity in the mental evolution of man. It has guided him so far, illumining his path with whatever light it was capable of. But any further help reason seems unable to give him. What man needs now is intuitional knowledge, a deeper self-awareness, for which he must develop higher than mental faculties. The awakening individual therefore begins to betray his subjective inclinations. He must know and be in complete possession of all the powers and possibi-

¹ *The Life Divine*, Vol. I, p. 183.

lities that lie hidden in him. And he must have scope enough for that in life. So he demands utmost freedom for his growth and widest opportunities for self-development. New ideas begin to stir him to new activities, and the result is a remarkable advance in art, literature, education and thought, every one of which attests the trend of a mind more and more waking into the intrinsic meaning of things.

Like individuals, peoples also gradually begin to discover their own selves, their own genius and possibilities. And this new-found consciousness incarnates itself in the nation which bids fair to be the living embodiment of the collective aspiration of human groups. The communal soul of humanity seems to be awakening. But the nature of these groups is not everywhere the same. An excessive stress on equal rights of man to satisfy his physical needs leads some of them into those dark recesses of a sheer ravenous materiality where they are caught in the toils of lower undivine forces. In one of them at least, as it appears, the ego of life has got so much enmeshed in the tangle of matter that it regards man as nothing more than a human animal. In another, it is the ego of mind that combined with the ego of life only to become the instrument of a dangerous evil. And both have been responsible for the rise of that dictatorial totalitarianism which threatens to destroy all superior values of life, all prospects of further advancement of the race, since the individual in it has no separate status and, therefore, no freedom to

express his higher self. And in the collectivities elsewhere the vestiges of their egoistic aggrandisement linger in the forms—though much weakened—of ‘earth-hunger, gold-hunger and commodity-hunger’.

To save the world from the disastrous consequences of these and other aberrations of the groups, Nature rouses in the progressive nations the democratic impulse and reaffirms to them the ideals of peace, freedom and unity. Indeed, these ideals have always been there before man inspiring his onward march, and accentuated at critical times by the pioneers of the race or by world-shaking cataclysms, but never before so much as after the War of 1914, and in the present time itself when a yet worse crisis mankind is passing through. And these ideals are certainly not those that exist only in the imagination of man. Today they are much clearer in his vision than at any time in history. And there are signs that Nature insists on their acceptance by man as the governing principles of his collective life. Whatever the politicians might say or do, the race has begun to be moved into an earnest aspiration for a life of permanent peace and freedom. That is how nations and peoples are called by Nature to wake up and be ready for a greater future.

The world-wide influence of European culture is a phenomenon as unique as it was inevitable. Never in history has the whole of the civilised mankind had such a common cultural experience as it is having today through its contact with the dynamic culture of

the West. And it is an experience that man everywhere must go through in order to be fit for the subjective stage that follows the individualistic. Control of matter, discipline of life, organisation and method, enlightened reason, emancipation of mind, search for knowledge and truth, are its outstanding contributions that do help in strengthening the foundations of life on which the future has to be built. It is these again that prove to be cohesive factors in the collective life of man uniting him into a common outlook, common endeavours, and into those common corporate activities that constitute in history the movements of the human whole.

Individualism always carries in it the seeds of subjectivism. And the future depends on how the latter thrives in conditions made favourable by the former. In the materialistic mind of Europe and in other countries these seeds did not sprout as easily as they did in the inward mind of Asia, particularly of India. In fact, the impact of the West had not to be a long process for enforcing in the East the beginnings of the subjective age. It served as an incentive to Japan to discover her national self, her creative genius which flowered into manifold expressions; but as she slavishly imitated the aggressive group-egoism of Europe and chose to tread in the steps of rapacious Imperialism she fell an equal victim to the forces of darkness and proved a sworn enemy of the Light. China, the Mother of the Far East, could not so easily respond to the Western influence. When, however, in recent years

she came to realise the elements of truth in it, she lost no time in receiving whatever of value there was in Europe, and was soon able to quicken her life into that magnificent national awakening which is comparable to nothing of its kind in all history. And China stands not only for her own freedom but also for a better and happier world for the whole of mankind.

Like conservative China, India also took some time to derive the intended benefit from the European impact. But the very moment she was on the path of self-discovery she began striving for the resuscitation of her national genius, and the result was a resurgence of her creative soul in every sphere of her life. Her inborn spiritual impulse, thus rekindled, broke into many stupendous efforts not only to re-vision the truths of the past but also to bring them to bear on the life of the race for an all-round harmonious uplift. After a period of glorious striving crowned with many achievements, the vision of the highest Ideal has now come to her as also the power to make it real on earth. The Master of the race has spoken the Word. The Light which the Rishis of old glimpsed shines now full upon him in all its supernal splendour, and the hour of its descent on earth is approaching. It is the power of this Light that will lift humanity beyond itself and new-mould it into a divine perfection. Says the Master: "As there has been established on earth a mental Consciousness and Power which shapes a race of mental beings and takes up into itself all of earthly nature that is ready for the change, so now

there will be established on earth a gnostic Consciousness and Power which will shape a race of gnostic spiritual beings and take up into itself all of earth-nature that is ready for this new transformation.”¹

Conditions in the world today do not seem to indicate the coming of such a spiritual change in the life of man, at least in the near future. But the ways of the Divine are inscrutable, and out of the worst of evils He carves an image of the supreme Good. Mystics and prophets of all climes and ages have averred that the brightest Dawns are always preceded by the darkest Nights. Indeed, the greater and nearer the Manifestation, the fiercer becomes the resistance to it by the hostile forces that have their empire already established on earth and would not part with it. It is this resistance to the descending supramental Light that has thrown the world into such gigantic conflagrations.

There are other signs, too, not externally perceptible, but equally, if not more, suggestive of the conditions of the earth being ready for that Light to come down and be active in its consciousness. True, the essential nature of man has not improved in proportion to his cultural progress and that the civilisation he has built up and the control his Science has given him over the potencies of universal Force are proving beyond his limited mental capacity to utilise and manage, but it is also true that through his progress so far his mind has now reached the very summit of its normal possi-

bilities, which was so necessary for the next evolutionary ascent of the race. Thus is the condition created for a higher power than the mind to descend and manifest on earth and effect a new status of evolution. And it is for this that man is waking up from his agelong sleep in the Ignorance, from the evil dream of an unquiet desire-driven existence, and is catching the first golden glints of a dawning glory. Large ideas, vast thoughts, wonderful visions, matchless dreams are stirring his heart and soul, and he is beginning to feel that out of the present convulsive throes a new world is at last going to be born,—a New Heaven, as it were, which evolutionary Nature has long been patiently building. But the most glorious promise of that 'divine event' is that they who would liberate man are come and are here on earth today—they who are the Leaders of the Way, the Bringers of the Light.

The subjective period of humanity is marked by a definite tendency towards 'inner seeking and thinking, new attempts at mystic experience, groping after the inner meaning of things, a reawakening to some sense of the truth and power of the spirit'. As this tendency deepens in man, his vision becomes larger and larger opening him to the secret aim of his life on earth as well as to the truth that he will attain his highest spiritual perfection—for that is God's intention in him—only when, with the descent into him of the Light from above, he rises into the supramental consciousness which alone can effectuate a total conversion of

his present imperfect nature into the perfect Nature of the Divine. Thus emerges the superman, and man having completed the human cycle enters upon the new cycle of a divine living. A greater age of the Spirit dawns on earth. It is not that the whole race will be raised at once and *en bloc* to the supramental level. The individuals ready for it will first attain to it and form the nucleus of the gnostic community, the earnest of the perfect race of the future. Founded in the Knowledge of the Truth, the gnostic being will be one in the Spirit, one in the consciousness of the supreme Shakti, and will live and act in Peace, Freedom and Unity that are for ever. This is how man fulfils his highest individual and collective destiny and how a spiritual, a perfect Society comes into being.

VIII

History finds its deepest and widest meaning when its writing is guided by the vision of how man as a race grows towards that heavenly Light which is the eternal abode of his spiritual existence. To trace this chequered march of man through the ages, outlined above mainly from the standpoint of his social development, will be the great task of the historian, to discharge which in the best way he will have, among other things, to unravel the inmost significance of the cultural movements of each of the epochs, showing from a larger view how all of

them converge towards the one goal,—attainment by man of a Godlike life. Not only that, he will have also to show that every one of man's activities has been a step forward to the same end. His art and science, his religion and philosophy, his mysticism and spirituality, his dreams and visions, his aims and aspirations, his society and politics, his trials and sufferings, his struggles and failures, no less than his peace and happiness, his victories and triumphs—all these are but kaleidoscopic scenes in the wonderful drama of man; and all reveal in the last analysis the one evolutionary intention of the Supreme Shakti who indeed is the real veiled Player in them, up-bearing and directing the labour of man towards his divine perfection.

When the historian becomes the exponent of this grand spiritual integration of humanity, the interpreter of its triumphal progress towards Unity and Harmony, towards the termless luminous bliss of an infinite and immortal Perfection, he not only extends to their utmost the frontiers of his own province but also achieves the consummate greatness of his function. Croce said that history should be written only by philosophers, because 'they will look at things in the large'. We may add that history should be written by the seers who command an integral vision of the cosmic existence and its aeonic evolution. And what is this cosmic evolution but a progressive self-revelation of Sachchidananda?
